

Designation: F 468 – 01^{ε1}

Standard Specification for Nonferrous Bolts, Hex Cap Screws, and Studs for General Use¹

This standard is issued under the fixed designation F 468; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reappraisal.

This standard has been approved for use by agencies of the Department of Defense.

^{ε1} NOTE—Section S4 was editorially corrected in October 2001.

1. Scope

1.1 This specification covers the requirements for commercial wrought nonferrous bolts, hex cap screws, and studs 0.250 to 1.500 in. inclusive in diameter manufactured from a number of alloys in common use and intended for general service applications.

1.2 Applicable nuts for use with bolts, cap screws, and studs covered by this specification are covered by Specification F 467.

NOTE 1—A complete metric companion to Specification F 468 has been developed—F 468M; therefore no metric equivalents are presented in this specification.

3. Ordering Information

3.1 Orders for fasteners under this specification shall include the following information:

3.1.1 Quantity (number of pieces of each item and size),

3.1.2 Name of item. For silicon bronze alloy 651, state if hex cap screw dimensions or roll thread body diameter are required (see 7.1.2),

3.1.3 Size (diameter, threads per inch, length),

3.1.4 Alloy number (Table 1). For Ti5, state Class A or Class B (Table 11, 6.5, and 6.5.1),

3.1.5 Stress relieving, if required (see 4.2.3),

3.1.6 Shipment lot testing, as required (see Section 10),

3.1.7 Source inspection, if required (see Section 14),

3.1.8 Certificate of compliance or test report, if required (see Section 16),

3.1.9 Additional requirements, if any, to be specified on the purchase order (see 4.2.1, 4.2.4, 7.3.1, 8.2, 11.1, and 12.1),

3.1.10 Supplementary Requirements, if any, and

3.1.11 ASTM designation and date of issue.

NOTE 2— Example

10 000 pieces, Hex Cap Screw, 0.250 in.-20 × 3.00 in., Alloy 270. Furnish Certificate of Compliance, Supplementary Requirement S1, ASTM F 468 dated —.

4. Materials and Manufacture

4.1 Materials:

4.1.1 The bolts, cap screws, and studs shall be manufactured from material having a chemical composition conforming to the requirements in Table 1 and capable of developing the required mechanical properties for the specified alloy in the finished fastener.

4.1.2 The starting condition of the raw material shall be at the discretion of the fastener manufacturer but shall be such

that the finished products conform to all of the specified requirements.

4.2 Manufacture:

4.2.1 Forming—Unless otherwise specified, the fasteners shall be cold formed, hot formed, or machined from suitable material, at the option of the manufacturer.

4.2.2 Condition—Except as provided in 4.2.3, the fasteners shall be furnished in the following conditions:

Alloy	Condition
Copper (all alloys)	As formed or stress relieved at manufacturer's option
Nickel alloys: 400 and 405	As formed or stress relieved at manufacturer's option Solution annealed and aged
500	Solution annealed and aged
Aluminum alloys: 2024-T4 6061-T6	Solution treated and naturally aged Solution treated and artificially aged
7075-T73	Solution treated and stabilized
Titanium	As formed

4.2.3 Stress Relieving—When required, stress relieving shall be specified by the purchaser for nickel alloys 400 and 405 and all copper alloys.

4.2.4 Threads—Unless otherwise specified, the threads shall be rolled or cut at the option of the manufacturer.

5. Chemical Composition

5.1 Chemical Composition—The fasteners shall conform to the requirements as to chemical composition prescribed in Table 1 for the specified alloy.

5.2 Manufacturer's Analysis:

5.2.1 When test reports are required on the inquiry or purchase order (see 3.1.8), the manufacturer shall make individual analyses of randomly selected finished fasteners from the product to be shipped and report the results to the purchaser, except as provided in 5.2.2. Alternatively, if heat and lot identities have been maintained, the analysis of the raw material from which the fasteners have been manufactured may be reported instead of product analysis.

5.2.2 For aluminum fasteners, the manufacturer may furnish instead a certificate of conformance certifying compliance with the chemical composition specified in Table 1.

5.3 Product Analysis:

5.3.1 Product analyses may be made by the purchaser from finished products representing each lot. The chemical composition thus determined shall conform to the requirements in Table 1.

5.3.2 In the event of disagreement, a referee chemical analysis of samples from each lot shall be made in accordance with 11.1 and 12.1.

TABLE 1 Chemical Requirements

UNS Designation Number	Alloy	General Name	Composition, %														
			Aluminum	Copper, min	Iron, max	Manganese, max	Nickel, max	Phosphorus	Silicon	Zinc, max ^A	Lead, max	Tin	Arsenic, max				
C11000	110	ETP copper		99.9													
C27000	270	brass		63.0–68.5	0.07												
C46200	462	naval brass		62.0–65.0	0.10												
C46400	464	naval brass		59.0–62.0	0.10												
C51000	510	phosphor bronze		balance ^B	0.10												
C61300	613	aluminum bronze	6.0–7.5		2.0–3.0	0.10		0.15 ^C									
C61400	614	aluminum bronze	6.0–8.0		1.5–3.5	1.0		4.0–5.5									
C63000	630	aluminum bronze	9.0–11.0		2.0–4.0	1.5		0.25									
C64200	642	aluminum silicon bronze	6.3–7.6		0.30	0.10		0.25									
C65100	651	silicon bronze			0.8	0.7		0.6									
C65500	655	silicon bronze			0.8	1.5		0.6									
C66100	661	silicon bronze			0.25	1.5		0.6									
C67500	675	manganese bronze	0.25 max		0.8–2.0	0.05–0.5		19.0–23.0 ^C									
C71000	710	cupro-nickel			0.60	1.00		29.0–33.0 ^C									
C71500	715	cupro-nickel			0.40–0.7	1.00		29.0–33.0 ^C									

^AElements shown as balance shall be arithmetically computed by deducting the sum of the other named elements from 100.

^BCopper plus specified elements = 99.8 min; copper plus silver = 88.5–91.5.

^CCobalt is to be counted as nickel.

^DMinimum content of copper plus all other elements with specified limits shall be 99.5 %.

^EAn alloy containing as high as 2.6 % silicon is acceptable provided the sum of all the elements other than copper, silicon, and iron does not exceed 0.30 %.

^AAll reported values are maximums, unless a range is specified.

^BA residual is an element present in a metal or an alloy in small quantities inherent to the manufacturing process but not added intentionally. Residual elements need not be reported unless a report is specifically required by the purchaser.

^CIdentical chemical requirements apply to both Class A and B as defined in Table 2 and 6.5.

^DRuthenium and palladium, or both, may be added to Grade 19 for enhanced corrosion resistance as negotiated between purchaser and vendor. Chemical analysis is not required unless specifically required by the purchaser.
