### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

- Catalogue of IEC publications: [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The IEC on-line Catalogue enables you to search by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, withdrawn and replaced publications.

- IEC Just Published: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Stay up to date on all new IEC publications. Just Published details twice a month all new publications released. Available on-line and also by email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 20 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary online.

- Customer Service Centre: [www.iec.ch/webstore/custserv](http://www.iec.ch/webstore/custserv)

If you wish to give us your feedback on this publication or need further assistance, please visit the Customer Service Centre FAQ or contact us:

### A propos de la CEI

La Commission Electrotechnique Internationale (CEI) est la première organisation mondiale qui élabore et publie des normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications CEI

Le contenu technique des publications de la CEI est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

- Catalogue des publications de la CEI: [www.iec.ch/searchpub/cur\\_fut-f.htm](http://www.iec.ch/searchpub/cur_fut-f.htm)

Le Catalogue en-ligne de la CEI vous permet d'effectuer des recherches en utilisant différents critères (numéro de référence, texte, comité d'études,...). Il donne aussi des informations sur les projets et les publications retirées ou remplacées.

- Just Published CEI: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Restez informé sur les nouvelles publications de la CEI. Just Published détaille deux fois par mois les nouvelles publications parues. Disponible en-ligne et aussi par email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne au monde de termes électroniques et électriques. Il contient plus de 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans les langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International en ligne.

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61526 has been prepared by subcommittee 45B: Radiation protection instrumentation, of IEC technical committee 45: Nuclear instrumentation.

This third edition cancels and replaces the second edition published in 2005. This edition constitutes a technical revision. This edition includes the following significant technical changes with regard to the previous edition:

- Inclusion of terms and definitions from ISO/IEC Guide 99:2007 (VIM:2008).
- Full consistency with IEC/TR 62461:2006 "*Radiation protection instrumentation – Determination of uncertainty in measurement*".
- Improved determination of constancy of the dose response and statistical fluctuations.
- Abolition of classes of personal dose equivalent meters in relation to retention of stored information.
- Inclusion of usage categories of personal dosimeters in Annex C.

The text of this standard is based on the following documents:

FDIS	Report on voting
45B/648/FDIS	45B/666/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

<https://standards.iteh.ai/catalog/standards/sist/2bfl6fa3-fdf3-43d8-847b-559cce444f24/iec-61526-2010>

## INTRODUCTION

This International Standard applies to active, direct reading personal dose equivalent meters and monitors used for measuring the personal dose equivalents  $H_p(10)$  and  $H_p(0,07)$  for X, gamma, neutron and beta radiations.

For the personal dose equivalent  $H_p(10)$  or the personal dose equivalent rate  $\dot{H}_p(10)$  and for X and gamma radiations, two minimum rated ranges for the photon energy are given. The first from 20 keV to 150 keV is for workplaces where low energy X-rays are used, e.g., in medical diagnostic, the second from 80 keV to 1,5 MeV is for workplaces where high energy X-rays and/or gamma sources are used, e.g., in industry. For neutron radiation the minimum rated range of neutron energy is from 0,025 eV (thermal neutrons) to 5 MeV. The rated ranges can be extended to all energies covered by the respective standards for reference radiation fields.

For the personal dose equivalent  $H_p(0,07)$  and for X and gamma radiations, a minimum rated range for the photon energy from 20 keV to 150 keV is given and for beta radiation, the minimal rated range is from 0,2 MeV to 0,8 MeV. The rated ranges can be extended to all energies covered by the respective standards for reference radiation fields.

Examples of extended rated ranges are given in Annex C.

In some applications, for example, at a nuclear reactor installation where 6 MeV photon radiation is present, measurement of personal dose equivalent (rate)  $H_p(10)$  for photon energies up to 10 MeV should be required. In some other applications, measurement of  $H_p(10)$  down to 10 keV should be required.

For personal dose equivalent meters, requirements for measuring the dose quantities  $H_p(10)$  and  $H_p(0,07)$  and for monitoring of the dose rate quantities  $\dot{H}_p(10)$  and  $\dot{H}_p(0,07)$  are given. The measurement of these dose rate quantities is an option for personal dose equivalent meters.

Establishments in some countries may wish to use this type of personal dose equivalent meter as the dosimeter to provide the dose of record by an approved dosimetry service.

# RADIATION PROTECTION INSTRUMENTATION – MEASUREMENT OF PERSONAL DOSE EQUIVALENTS $H_p(10)$ AND $H_p(0,07)$ for X, GAMMA, NEUTRON AND BETA RADIATIONS – DIRECT READING PERSONAL DOSE EQUIVALENT METERS

## 1 Scope and object

This International Standard applies to personal dose equivalent meters with the following characteristics:

- a) They are worn on the trunk or the extremities of the body.
- b) They measure the personal dose equivalents  $H_p(10)$  and  $H_p(0,07)$  from external X and gamma, neutron and beta radiations, and may measure the personal dose equivalent rates  $\dot{H}_p(10)$  and  $\dot{H}_p(0,07)$ .
- c) They have a digital indication.
- d) They may have alarm functions for the personal dose equivalents or personal dose equivalent rates.

This standard is therefore applicable to the measurement of the following combinations of dose quantities (including the respective dose rates) and radiation

- 1)  $H_p(10)$  and  $H_p(0,07)$  from X and gamma radiations;
- 2)  $H_p(10)$  and  $H_p(0,07)$  from X, gamma and beta radiations;
- 3)  $H_p(10)$  from X and gamma radiations;
- 4)  $H_p(10)$  from neutron radiations;
- 5)  $H_p(10)$  from X, gamma and neutron radiations;
- 6)  $H_p(0,07)$  from X, gamma and beta radiations.

NOTE 1 When reference is made in this standard to "dose", this is meant to indicate personal dose equivalent, unless otherwise stated.

NOTE 2 When reference is made in this standard to "dosemeter", this is meant to include all personal dose equivalent meters, unless otherwise stated.

This standard specifies requirements for the dosimeter and, if supplied, for its associated readout system.

This standard specifies, for the dosimeters described above, general characteristics, general test procedures, radiation characteristics as well as electrical, mechanical, safety and environmental characteristics. The only requirements specified for associated readout systems are those which affect its accuracy of readout of the personal dose equivalent and alarm settings and those which concern the influence of the reader on the dosimeter.

This standard also specifies in Annex C usage categories with respect to different measuring capabilities.

This standard does not cover special requirements for accident or emergency dosimetry although the dosimeters may be used for this purpose. The standard does not apply to dosimeters used for measurement of pulsed radiation, such as radiation emanating from most medical diagnostic X-ray facilities, linear accelerators or similar equipment.

### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60050-393, IEC 60050-394, IEC 60359 and ICRU Report 51, as well as the following terms and definitions, apply.

### 3.1

#### acceptance test

contractual test to prove to the customer that the device meets certain conditions of its specification

[IEV 394-20-09; IEV 151-16-23; IEV 394-40-05]

### 3.2

#### calibration (for the purpose of this standard)

quantitative determination of the reference calibration factor,  $N_0$ , and the correction for non-constant response,  $r_n$ , under a controlled set of standard test conditions for which all the  $m$  relative response values,  $r_q$ , are unity and all the  $l$  deviations,  $D_p$ , are zero

### 3.3

#### calibration factor

$N$

quotient of the conventional true value of a quantity,  $H_r$ , and the indicated value,  $G_r$ , at the point of test for a specified reference radiation under specified reference conditions. It is expressed as

$$N = \frac{H_r}{G_r}$$

NOTE 1 (See ISO 4037-3) The calibration factor  $N$  is dimensionless when the instrument indicates the quantity to be measured. A dosimeter indicating the conventional quantity value correctly has the calibration factor of one.

NOTE 2 (See ISO 4037-3) The reciprocal of the calibration factor is equal to the response under reference conditions. In contrast to the calibration factor, which refers to the reference conditions only, the response refers to any condition prevailing at the time of measurement.

NOTE 3 (See ISO 4037-3) The value of the calibration factor may vary with the magnitude of the quantity to be measured. In such cases, a dosimeter is said to have a non-constant response.

### 3.4

#### coefficient of variation

ratio of the standard deviation  $s$  to the arithmetic mean  $\bar{x}$  of a set of  $n$  measurements  $x_i$  given by the following formula:

$$v = \frac{s}{\bar{x}} = \frac{1}{\bar{x}} \sqrt{\frac{1}{n-1} \sum_{i=1}^n (x_i - \bar{x})^2}$$

[IEV 394-40-14]

### 3.5

#### combined standard measurement uncertainty

combined standard uncertainty

$u_c$

standard measurement uncertainty that is obtained using the individual standard measurement uncertainties associated with the input quantities in a measurement model

NOTE In case of correlations of input quantities in a measurement model, covariances must also be taken into account when calculating the combined standard measurement uncertainty; see also ISO/IEC Guide 98-3:2008, 2.3.4.

[ISO/IEC Guide 98-3:2008, 2.31]

**3.6****conventional quantity value**

conventional value of a quantity

conventional value

quantity value attributed by agreement to a quantity for a given purpose

NOTE 1 The term “conventional true quantity value” is sometimes used for this concept, but its use is discouraged.

NOTE 2 Sometimes a conventional quantity value is an estimate of a true quantity value.

NOTE 3 A conventional quantity value is generally accepted as being associated with a suitably small measurement uncertainty, which might be zero.

[ISO/IEC Guide 98-3:2008, 2.12]

NOTE 4 In this standard the quantity is the dose equivalent (rate).

**3.7****correction for non-constant response** $r_n$ 

quotient of the response,  $R$ , under specified conditions where only the quantity to be measured is varied and the reference response,  $R_0$ . It is expressed as

$$r_n = \frac{R}{R_0}$$

NOTE For an instrument with constant response,  $r_n$  is equal to one.

**3.8****detector assembly**

assembly of a radiation detector and the associated components needed for the calibration or the determination of the response

NOTE The calibration result is only valid for this detector assembly.

EXAMPLE A personal dosimeter is to be calibrated using a phantom. The combination of personal dosimeter and phantom and possibly further reading instruments and cables comprise one detector assembly.

[ISO/DIS 29661, 3.1.10]

**3.9****deviation** $D$ 

difference between the indicated values for the same value of the measurand of a dose equivalent (rate) meter, when an influence quantity assumes, successively, two different values

[IEV 311-07-03, modified]

$$D = G - G_r$$

where  $G$  is the indicated value under the effect of an influence quantity and  
 $G_r$  is the indicated value under reference conditions.

NOTE 1 The original term in IEV 311-07-03 reads “variation (due to an influence quantity)”. In order not to confuse variation (of the indicated value) and variation of the response, in this standard, the term is called “deviation”.

NOTE 2 The deviation can be positive or negative resulting in an increase or a decrease of the indicated value, respectively.

NOTE 3 The deviation is of special importance for influence quantities of type S.
