Descriptors : jewels, rings, dimensional measurements, designation.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 8653 was prepared by Technical Committee ISO/TC 174, *Jewellery*.

Users should note that all International Standards undergo revision from time to time and that any reference made herein to any other International Standard implies its latest edition, unless otherwise stated.

Jewellery — Ring-sizes — Definition, measurement and designation

iTeh STANDARD PREVIEW

1 Scope and field of application

This International Standard specifies the method for measuring the size of rings for the purposes of designating ring-sizes to be used in jewellery.

c) maximum ring-size: 76

d) material: metal, or material with equivalent wear resistance.

2 Definition

ring-size: The inner circumference of the ring expressed in millimetres.

3 Measurement

The inner circumference of the ring should be measured using a tapered ring-gauge (ring-stick) with the following characteristics:

- length of the measurement scale: $160 \pm 0,5$ mm
- minimum ring-size: 41

4 Designation

The size of the ring shall be designated by the number of this International Standard followed by the inner circumference of the ring expressed in millimetres rounded to the nearest millimetre.

Example:

Designation for a ring with a ring-size of 43 mm measured in accordance with this International Standard:

Ring-size ISO 8653 - 43
