### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### Useful links:

IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The advanced search enables you to find IEC publications by a variety of criteria (reference number, text, technical committee,...).

It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available on-line and also once a month by email.

Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary (IEV) on-line.

Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

<https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013>

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ALARM AND ELECTRONIC SECURITY SYSTEMS –****Part 11-1: Electronic access control systems –  
System and components requirements**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60839-11-1 has been prepared by IEC technical committee 79: Alarm and electronic security systems.

The text of this standard is based on the following documents:

FDIS	Report on voting
79/410/FDIS	79/416/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60839 series, published under the general title *Alarm and electronic security systems*, can be found on the IEC website.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## **iTeh STANDARD PREVIEW (standards.iteh.ai)**

[IEC 60839-11-1:2013](#)

<https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013>

## INTRODUCTION

This standard is part of the IEC 60839 series, written to include the following parts:

Part 11-1 Electronic access control systems – System and components requirements

Part 11-2 Electronic access control systems – Application guidelines

This part of IEC 60839 describes the general requirements for functionalities of electronic access control systems (EACS) for use in security applications. The design, planning, installation, operation, and maintenance are part of the application guidelines in IEC 60839-11-2<sup>1</sup>. The risk analysis is not part of this standard and the risk levels are for informational purposes only.

An electronic access control system consists of one or more components that when interconnected meet the functionality criteria stated in this standard.

This standard defines different security grades and the functionalities of the access control system associated with each of these grades. It includes also the minimum environmental and EMC compliance criteria as applicable for components of the electronic access control system in every grade.

When a part of an electronic access control system (e.g. access point interface) forms a part of an alarm system (intrusion, hold-up, VSS [Video Surveillance Systems], etc.) that part shall also fulfil the relevant requirements of the applicable IEC standards. Functions additional to the mandatory functions specified in this standard may be included in the electronic access control system providing they do not prevent the requirements of this standard from being met.

This International standard also applies to access control systems sharing means of recognition, detection, triggering, interconnection, control, communication, alert signalling and power supplies with other applications. The operation of an access control system should not be adversely influenced by other applications.

An electronic access control system may consist of any number of access points. This standard addresses the security grade classification for each access point.

Compliance of the individual component parts of the electronic access control system can be assessed to this standard provided all relevant requirements are applied.

The specific requirements for access point actuators, such as electric door openers, electronic locks, turnstiles and barriers are included in other standards.

---

<sup>1</sup> Under consideration.

## ALARM AND ELECTRONIC SECURITY SYSTEMS –

### Part 11-1: Electronic access control systems – System and components requirements

#### 1 Scope

This part of IEC 60839 specifies the minimum functionality, performance requirements and test methods for electronic access control systems and components used for physical access (entry and exit) in and around buildings and protected areas. It does not include requirements for access point actuators and sensors.

This standard is not intended to cover requirements for off premise transmission associated with intrusion or hold up alarm signals.

This standard applies to electronic access control systems and components intended to be used in security applications for the granting of access and includes requirements for logging, identification and control of information.

The standard comprises the following:

- A conceptual model and system architecture.
- Criteria covering:
  - classification based on performance functionalities and capabilities;
  - access point interface requirements;
  - indication and annunciation requirements (display, alert, logging);
  - duress signalling and overriding;
  - recognition requirements;
  - system self-protection requirements;
  - communication between the component parts of the electronic access control system and with other systems.
- Requirements for environmental conditions (indoor/outdoor use) and electromagnetic compatibility.
- Test methods.

#### 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60068-1, *Environmental testing – Part 1: General and guidance*

IEC 60529, *Degrees of protection provided by enclosures (IP Code)*

IEC 62262, *Degrees of protection provided by enclosures for electrical equipment against external mechanical impacts (IK code)*

IEC 62599-1, *Alarm systems – Part 1: Environmental test methods*

IEC 62599-2, *Alarm systems – Part 2: Electromagnetic compatibility –Immunity requirements for components of fire and security alarm systems*

IEC 62642-1, *Alarm systems – Intrusion and hold-up systems – Part 1: System requirements*

IEC 62642-6, *Alarm systems – Intrusion and hold-up systems – Part 6: Power supplies*

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

#### 3.1

##### **abnormal status**

deviation from the expected mode of operation

#### 3.2

##### **access**

##### **physical access**

action of entering into (or exiting from) a security controlled area

#### 3.3

##### **access control unit controller**

part of an access control system that interfaces with readers, locking devices and sensing devices, making a decision to grant or deny access through a portal

<https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013>

#### 3.4

##### **access decision**

action of comparing information with pre-set rules to determine whether to grant or deny access

#### 3.5

##### **access level**

set of rules used to determine where and when a credential has authorized access to one or more portals and which may include special passage conditions such as specific portal allowed open times

#### 3.6

##### **access point**

##### **portal**

physical entrance/exit at which access can be controlled by a door, turnstile or other secure barrier

#### 3.7

##### **access point actuation**

##### **portal actuation**

function of an electronic access control system related to the releasing or securing of a portal according to pre-set rules and conditional on the access rights of users

#### 3.8

##### **access point overriding**

##### **portal actuation overriding**

action of issuing a manual command to bypass the pre-configured mode of operation (i.e. release/secure/block) of an access point

**3.9**

**access point actuator**  
**portal actuator**

part of an access control system that interfaces to an access control unit releasing and securing a portal according to pre-set rules

**3.10**

**access point forced open**  
**portal forced open**

alert signal generated when an access point is opened without access being granted

**3.11**

**access point interface**  
**portal interface**

device or circuitry which controls releasing and securing of an access point

**3.12**

**access point status change**  
**portal status change**

event initiated by the change of an access point either from locked to unlocked or from unlocked to locked

**3.13**

**access point locking device**  
**portal locking device**

assembly associated with the access point, which performs the function of holding an access point in the closed position and capable of releasing the access point in accordance with pre-set rules

**3.14**

**access point open time**  
**portal open time**

maximum time an access point door may be held open after access is granted and before an access point opened too long alert is generated

[IEC 60839-11-1:2013](#)

[standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013](#)

**3.15**

**access point opened too long alert**  
**portal opened too long alert**

signal generated when an access point open time is exceeded after access is granted

**3.16**

**access point release**  
**portal release**

signal to the access point locking device that access has been granted

**3.17**

**access point sensor**  
**portal sensor**

electrical component used to monitor the open or closed status of an access point, or locked/unlocked status of a locking device, or the secure/unsecure status of an electromagnetic lock or armature plate

**3.18**

**access request**

reading of a credential at a portal initiating the decision process for granting entry to or exit from the area controlled by the portal

Note 1 to entry: See request-to-exit device.

**3.19****access request response time**

time required by the system to react to an access request from the correct presentation of the credential until the activation of the responding device

Note 1 to entry: Access request response time replaces the term authentication time.

**3.20****accessory equipment**

any component of an electronic access control system other than the access control unit

**3.21****alarm**

<access control system> condition requiring human assessment or intervention.

Note 1 to entry: Often used in electronic access control system in the sense of alert.

**3.22****alert**

functionality of an electronic access control system related to the activation of an indicator to prompt human assessment

**3.23****alert at the portal**

visual and or audible signal at the portal prompting action to close the opened access point/portal and terminate the alert condition.

**3.24****alert inhibition****by-passing**

system function preventing an event from generating an alert

Note 1 to entry: The alert inhibition event may or may not be logged.

Note 2 to entry: The alert inhibition is manually enabled/disabled by the system operator portal by portal.

**3.25****ancillary device**

piece of equipment for supplementary control purposes designed to be attached or added to an electronic access control system by qualified service personnel and which will not prevent the basic access control system requirements from being met

**3.26****annunciation**

presentation of the information to users, management or other systems, achieved by the DISPLAY, ALERT and LOGGING functionalities of an electronic access control system

**3.27****anti-passback**

operating mode which requires user validation when leaving a security controlled area in order to be able to re-enter and vice versa

Note 1 to entry: Also refer to hard anti-passback, soft anti-passback, global anti-passback, and timed anti-passback.

**3.28****area controlled anti-passback**

operating mode which requires the user to be present in a designated security controlled area in order to be able to enter another security controlled area

**3.29**

**anti-passback overriding**

**anti-passback disabling**

system feature disabling the anti-passback

**3.30**

**anti-tailgating**

function which prevents or detects the attempt of two or more persons or entities to gain access using only one set of credentials

**3.31**

**armature plate**

metal plate designed for use with an electromagnetic lock

**3.32**

**authentication**

process used to verify the integrity of the recognition of credentials

**3.33**

**biometrics**

**biometric**, adj

any measurable, unique physiological characteristic or personal trait that is used as a credential to recognize and verify the identity of an individual's dynamics

EXAMPLE: Biometrics includes but is not limited to fingerprint, hand or face geometry, retinal/eye, face, voice, signature or keyboarding dynamics.

**ITeH STANDARD PREVIEW**  
**(standards.iteh.ai)**

**3.34**

**blocked access**

passage through an access point is prevented even when valid credentials are presented

IEC 60839-11-1:2013  
<https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013>

**3.35**

**buffered events**

temporarily stored events pending transmission for further processing

**3.36**

**card**

type of token

**3.37**

**cause of denial**

rationale for access denied

EXAMPLE: Causes of denial include: access privilege not including the particular portal, the particular time period, the particular day, the particular holiday, the particular facility code; memorized information incorrect or not provided in time; anti-passback violation; credential expired, not effective or not programmed in the system.

**3.38**

**component**

any part of an electronic access control system

EXAMPLE: Includes access control units, readers, access point actuators, access point sensors, keypads, request-to-exit devices, and any related subassembly.

**3.39**

**configurable**

characteristic of an electronic access control system function to be enabled and disabled or system parameter values to be modified as permitted by pre-set rules

### **3.40 configuration**

process or the result of enabling/disabling systems functions and/or changing parameter values as allowed by pre-set rules

### **3.41 configuration mode**

state of the access control unit during which the supported system functions can be enabled/disabled or parameters values can be set/changed as required

### **3.42 credential**

information either memorized or held within a token

EXAMPLE: The information includes a biometric image used to identify an individual to an access control system in order to authenticate a user

### **3.43 credential forgive**

command which re-enables a credential that has violated the anti-passback rules

Note 1 to entry: See forgive and global forgive.

### **3.44 credential suspend**

function of an electronic access control system allowing the temporary invalidation of a credential

Note 1 to entry: It is applied on a credential by credential basis, usually in situations when credentials have been lost.

[IEC 60839-11-1:2013](https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013)

<https://standards.iteh.ai/catalog/standards/sist/e88c8a83-255c-401b-9f7a-f80b6b3c6077/iec-60839-11-1-2013>

### **3.45 credential trace**

function which tracks the movement, in real time, of specific credentials (personal identification numbers, tokens or biometrics) in and out of portals.

Note 1 to entry: Programmed by the system manager the function will cause an alert, log or display on every use of a particular credential (personal identification number, token or biometrics) at any portal as defined by the system manager.

### **3.46 credential usage counter**

function used for parking areas and other special applications, which counts the number of uses and determines when the credential expires

### **3.47 data authentication**

process used to verify the integrity of transmitted data

Note 1 to entry: Data integrity exists as long as accidental or malicious destruction, modification or removal does not occur.

### **3.48 data entry system validation**

system administrator notification of system acceptance/rejection of individual data entered during programming mode

### **3.49 deadbolt**

locking device that extends and retracts a bolt using an electrical, hydraulic or pneumatic force
