## International Standard ISO 8802-3 : 1989

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75% approval by the member bodies voting.

In 1985, ANSI/IEEE Std 802.3-1985 was adopted by ISO Technical Committee 97, *Information processing systems*, as draft International Standard ISO/DIS 8802-3. Following the procedures described above, the Standard was subsequently approved by ISO in the form of this new edition, which is published as International Standard ISO 8802-3 : 1989. This edition also includes ISO 8802-3/DAD 1 which resulted from the adoption in 1987 of ANSI/IEEE Std 802.3a-1988.

For the purpose of assigning global addresses, the Institute of Electrical and Electronics Engineers, Inc., USA, has been designated by the ISO Council as the Registration Authority. Communications on this subject should be addressed to

Registration Authority for ISO 8802-3

PO Box 1331  
Piscataway, NJ 08855-1331  
USA

During the preparation of this International Standard, information was gathered on patents upon which application of the standard might depend. Relevant patents were identified as belonging to Xerox Corporation. However, ISO cannot give authoritative or comprehensive information about evidence, validity or scope of patent and like rights. The patent-holder has stated that licences will be granted under reasonable terms and conditions and communications on this subject should be addressed to

## Foreword to International Standard ISO 8802-3 : 1989

This standard is part of a family of standards for Local Area Networks (LANs). The relationship between this standard and the other members of the family is shown below. (The numbers in the figure refer to ISO Standard numbers.)

This family of standards deals with the physical and data link layers as defined by the ISO Open Systems Interconnection Reference Model (ISO 7498 : 1984). The access standards define four types of medium access technologies and associated physical media, each appropriate for particular applications or system objectives. The standards defining these technologies are:

- (1) ISO 8802-3 [ANSI/IEEE Std 802.3-1988], a bus utilizing CSMA/CD as the access method,
- (2) ISO 8802-4 [ANSI/IEEE Std 802.4-1985], a bus utilizing token passing as the access method,
- (3) ISO 8802-5 [ANSI/IEEE Std 802.5-1985], a ring utilizing token passing as the access method,
- (4) ISO 8802-7, a ring utilizing slotted ring as the access method.

ISO 8802-2 [ANSI/IEEE Std 802.2-1985], Logical Link Control protocol, is used in conjunction with the medium access standards.

The reader of this document is urged to become familiar with the complete family of standards.

The main body of this standard serves for both the ISO 8802-3 : 1989 and ANSI/IEEE 802.3-1988 standards. ISO and IEEE each have unique foreword sections. The Annex applies to the IEEE standard only. The Appendices serve as useful reference material to both standards.

## **ANSI/IEEE Std 802.3-1988**

**IEEE Standards** documents are developed within the Technical Committees of the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Board. Members of the committees serve voluntarily and without compensation. They are not necessarily members of the Institute. The standards developed within IEEE represent a consensus of the broad expertise on the subject within the Institute as well as those activities outside of IEEE which have expressed an interest in participating in the development of the standard.

Use of an IEEE Standard is wholly voluntary. The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least once every five years for revision or reaffirmation. When a document is more than five years old, and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments.

**Interpretations:** Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of all concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason IEEE and the members of its technical committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE Standards Board  
345 East 47th Street  
New York, NY 10017  
USA

IEEE Standards documents are adopted by the Institute of Electrical and Electronics Engineers without regard to whether their adoption may involve patents on articles, materials, or processes. Such adoptions does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the standards documents.

**Foreword to ANSI/IEEE Std 802.3-1988**  
**(Editorial Revision of ANSI/IEEE Std 802.3-1985 and**  
**ANSI/IEEE Std 802.3a-1988)**

(This Foreword is not a part of ISO 8802-3 : 1989 or of ANSI/IEEE Std 802.3-1988.)

This standard is part of a family of standards for Local Area Networks (LANs). The relationship between this standard and other members of the family is shown below. (The numbers in the figure refer to IEEE standard numbers.)

This family of standards deals with the Physical and Data Link Layers as defined by the ISO Open Systems Interconnection Reference Model. The access standards define three types of medium access technologies and associated physical media, each appropriate for particular applications or system objectives. The standards defining these technologies are:

- (1) ANSI/IEEE Std 802.3-1988 [ISO 8802-3], a bus utilizing CSMA/CD as the access method,
- (2) ANSI/IEEE Std 802.4-1985 [ISO 8802-4], a bus utilizing token passing as the access method,
- (3) ANSI/IEEE Std 802.5-1985 [ISO 8802-5], a ring utilizing token passing as the access method.

ANSI/IEEE Std 802.2-1985 [ISO 8802-2], the Logical Link Control standard, is used in conjunction with the medium access standards.

IEEE P802.1 describes the relationship among these standards and their relationship to the ISO Open Systems Interconnection Reference Model in more detail. This companion document also will contain networking management standards and information on internetworking. The reader of this standard is urged to become familiar with the complete family of standards.

The local area network access mechanism specified by this standard may

include patented matter. The IEEE Standards Office calls attention to the fact that it is claimed that the process of the local area network access mechanism described throughout this standard is the subject of United States patent numbers 4 063 220 and 4 099 024 and corresponding patents of foreign countries owned by the Xerox Corporation. Although these patents appear to cover the access mechanism subject in this standard, the IEEE takes no position with respect to patent validity. The Xerox Corporation has assured the IEEE that it is willing to grant a license under these patents on reasonable and nondiscriminatory terms and conditions to anyone wishing to obtain such a license. The Xerox Corporation's undertakings in this respect are on file with the IEEE Standards Office and the license details may be obtained from the Office of General Counsel of Xerox Corporation, whose address is Post Office Box 1600, Stamford, Connecticut 06904, USA.

This edition of the standard defines a 10 Mb/s baseband implementation of the Physical Layer using the CSMA/CD access method. It is anticipated that future editions of the standard may provide additional implementations of the physical layer to support different needs (for example, media, and data rates).

This standard contains state-of-the-art material. The area covered by this standard is undergoing evolution. Revisions are anticipated to this standard within the next few years to clarify existing material, to correct possible errors, and to incorporate new related material.

Readers wishing to know the state of revisions should contact

Secretary

IEEE Standards Board

Institute of Electrical and Electronics Engineers, Inc

Piscataway, NJ 08855-1331

When the IEEE 802.3 Working Group approved this standard in 1983 it had the following membership:

**Donald C. Loughry, *Chairman***

Phil L. Arst  
Robert F. Bridge  
Charles Brill  
G.J. Clancy  
John Davidson  
Ralph DeMent  
Hank (H. N.) Dorris  
Judith Estrin  
Richard Fabbri  
Ingrid Fromm  
Milton C. Harper  
Bryan Hoover  
George D. Jelatis  
Harold W. Katz

Donald E. Kotas  
William P. Lidinsky  
Laurie Lindsey  
William D. Livingston  
Andy Luque  
Daniel Maltbie  
Jerry McDowell  
C. Kenneth Miller  
Robert L. Morrell  
Wendell Nakamine  
W. P. Neblett  
James Nelson  
Thomas L. Phinney  
David Potter

Robert S. Printis  
Gary S. Robinson  
Robert Rosenthal  
Gary Stephens  
Daniel P. Stokesberry  
Ken. F. Sumner  
Daniel Sze  
Victor J. Tarassov  
P. E. Wainwright  
Lyle Weiman  
Hugh E. White  
Choa-Ping Wu  
Nick Zades  
Mo R. Zonoun

Individuals who contributed actively in the development of this standard throughout its elaboration were

Juan Bulnes  
Ron Crane  
Dane Elliot  
Alan Flatman  
Maris Graube  
Guy Harkins

Dean Lindsay  
Then. T. Liu  
Robert Moles  
Tony Lauck  
Joseph St. Amand  
Richard Seifert  
Nathan Tobol

Mark Townsend  
Roger Van Brunt  
Bo Vicklund  
Chris Wargo  
Richard Williams  
Ron Yara

The ECMA TC24 Committee on Communication Protocols also provided helpful input in the development of this standard.

The IEEE 802.3 Working Group acknowledges and appreciates that many concepts embodied in this standard are based largely upon the CSMA/CD access method earlier described in *The Ethernet* specification as written jointly by individuals from Xerox Corporation, Digital Equipment Corporation, and Intel Corporation. Appreciation is also expressed to Robert M. Metcalfe and David R. Boggs for their pioneering work in establishing the original concepts.

When the IEEE 802.3 Working Group approved ANSI/IEEE Std 802.3a-1988 (Section 10) in November 1984, it had the following membership:

**Don Loughry, Chairman**

**Alan Flatman, Chairman, Type 10BASE2 Task Force**

Menachem Abraham  
R.V. Balakrishnan  
William Belknap  
Charles Brill  
Juan Bulnes  
Stephen Cooper  
Ronald Crane  
John Davidson  
Mark Devon  
Phil Edholm  
Gregory Ennis  
Judy Estrin  
Richard Fransen  
Ingrid Fromm  
Robert Galin  
Rich Graham

Guy Harkins  
Greg Hopkins  
Joe Kennedy  
Hiroshi Kobayashi  
Tony Lauck  
William Livingston
