Reference number ISO 9382:1990(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75% of the member bodies casting a vote.

International Standard ISO 9382 was prepared by Technical Committee ISO/TC 8, Shipbuilding and marine structures.

Annexes A and B of this International Standard are for information only.

Shipborne barges, all series — Classification and main requirements

1 Scope

This International Standard specifies the dimensions, displacement and maximum deadweight of all series of shipborne barges.

2 Definition

and discharged from a barge-carrying vessel equipped for this purpose. It is also designed to be pushed or towed, individually or in trains, on inland waterways and other appropriate water zones.

3 Classification

For the purposes of this International Standard, the purposes of this International Standard, the B) shall have the dimensions, displacement and maximum deadweight as specified in table 1.

shipborne barge: Unpropelled, unmanned barge de S. it Additional data for general cargo barges of each signed to be loaded, secured and carried on board, series are given in annex A.

Additional data

In addition to shipborne barges of series 1, 2, 3 and 4 designed to carry general cargo, the dimensions of which are listed in table 1, shipborne barges of each series can be designed for the carriage of a range of specialized cargoes such as bulk liquids or refrigerated cargo. Specialized shipborne barges of each series will have dimensions as listed in table 1, but differences in structural design to cater for a specific cargo means that data for the cargo spaces and hatch openings will be different from those for the general cargo shipborne barge.

Typical hold capacity and clear hatch opening data for the general cargo shipborne barge of each series are as listed in table A.1.
