### *Addition*

IEC 62301:200X Measurement of Standby Power

### *Addition:*

## 12 Standby Power

The measurement of standby power shall be carried out according to IEC 62301:2005 and as modified by the requirements below.

For multifunctional appliances which may consist of a variety of different hobs and ovens which are designed to be combined in a single range, the recommended combination as declared in the manufacturer's instruction are used for the test.

Appropriate advice in the manufacturer's instructions for safe standby energy shall be followed when preparing the appliance for the test.

When testing appliances that are fitted with a timer, the timer shall be adjusted to the correct time and date as specified in the instructions. If an option is provided to switch off the display it is tested in this mode.

Where the selected mode is stable the product shall be allowed to stabilise for at least 30 min before the power consumption is monitored.

The appliance shall be at ambient temperature before the power is monitored.

When preparing the test report for multifunction appliances the combination of types of main powered parts (hobs, ovens, grills, warming plates, griddles etc) used for the measurement shall be recorded in addition to the brand, model, type, and serial number of each part.
