### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

- Catalogue of IEC publications: [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The IEC on-line Catalogue enables you to search by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, withdrawn and replaced publications.

- IEC Just Published: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Stay up to date on all new IEC publications. Just Published details twice a month all new publications released. Available on-line and also by email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 20 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary online.

- Customer Service Centre: [www.iec.ch/webstore/custserv](http://www.iec.ch/webstore/custserv)

If you wish to give us your feedback on this publication or need further assistance, please visit the Customer Service Centre FAQ or contact us:

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MULTIMEDIA HOME SERVER SYSTEMS –  
IMPLEMENTATION OF DIGITAL RIGHTS PERMISSION CODE**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example “state of the art”.

IEC 62636, which is a technical report, has been prepared by technical area 8: Multimedia home server systems, of IEC technical committee 100: Audio, video and multimedia systems and equipment.

The text of this technical report is based on the following documents:

Enquiry draft	Report on voting
100/1561/DTR	100/1611/RVC

Full information on the voting for the approval of this technical report can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.**

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC TR 62636:2009](#)

<https://standards.iteh.ai/catalog/standards/sist/71d6a1a3-c5fd-43db-81d9-163489a4bfc5/iec-tr-62636-2009>

## INTRODUCTION

IEC 62227, which defines the digital rights permission code, is structured so that information required by engineers familiar with how permission information is coded can easily access it. However, for engineers who are not familiar with the code, there are few descriptions of specific service scenarios and the permission code that corresponds to them. For these engineers it is therefore difficult to understand how to implement a digital rights permission code using just the information given in IEC 62227.

This Technical Report provides guidelines for digital rights permission code technology to supplement the information presented in IEC 62227 and to foster the use of digital rights permission code.

## **iTeh STANDARD PREVIEW** **(standards.iteh.ai)**

# MULTIMEDIA HOME SERVER SYSTEMS – IMPLEMENTATION OF DIGITAL RIGHTS PERMISSION CODE

## 1 Scope

This Technical Report provides guidelines to implement the digital rights permission code. It gives examples of fixed length permission codes derived from restricted code length profiling by using 23 specific usage scenarios to profile the variable-length digital rights permission code defined in IEC 62227 as fixed length digital rights permission code.

## 2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62227, *Multimedia home server systems – Digital rights permission code*

## 3 Terms, definitions, and abbreviations

### 3.1 Terms and definitions

#### 3.1.1

##### **permission**

act by a certain issuing entity to authorize the use of content to a certain receiving entity under a certain set of permission classifications and usage conditions

NOTE The issuing entity and/or the receiving entity may not only be human, but also a device, storage medium, organization, domain or another entity.

#### 3.1.2

##### **home server**

client device that serves as a gateway to a home domain

#### 3.1.3

##### **compliant device**

device that possesses functions to control content access as specified in a compliant license

#### 3.1.4

##### **domain**

set of actors to which a common set of rules apply in the context of content management

#### 3.1.5

##### **subscription**

fee-based permission that charges per time period

#### 3.1.6

##### **coupon**

fee-based permission that uses coupons, a form of alternative currency that can be exchanged for a given piece of content

NOTE Coupons are distributed to users by the content sponsor in order to increase user contact with that sponsor.

**3.1.7  
move**

usage type that permits the moving of content to a compliant medium under a reuse permission

NOTE Permission conditions are further specified in the condition parameters.

**3.1.8  
copy**

usage type that permits the copying of content to a compliant medium under a reuse permission

NOTE Permission conditions are further specified in the condition parameters.

**3.1.9  
export**

usage type that permits the exporting of content to a non-compliant medium under a reuse permission

NOTE Permission conditions are further specified in the condition parameters.

**3.1.10  
permission code**

code system that represents codes through a common system so that permissions from two parties with differing DRM implementations can interact with each other

**iTeh STANDARD PREVIEW**

**3.1.11  
parent permission code (standards.iteh.ai)**

permission code issued for a group of content

[IEC TR 62636:2009](https://standards.iteh.ai/catalog/standards/sist/71d6a1a3-c5fd-43db-81d9-163489a4bfc5/iec-tr-62636-2009)

**3.1.12  
child permission code**

permission code issued for an individual piece of content belonging to a larger group

**3.2 Abbreviations**

CD	Compact Disc
CPRM	Content Protection for Recordable Media
DCF	DRM Content Format
DRM	Digital Rights Management (System)
DRPC	Digital Rights Permission Code
DVD	Digital Versatile Disk
HD	High Definition
HDD	Hard Disk Drive
ID	Identifier
SAFIA	Security Architecture For Intelligent Attachment
WMT	Windows Media Technology

**4 Purpose and justification for this TR**

**4.1 General**

The digital rights permission code defined in IEC 62227 is variable-length, and there is no upper limit to the code length. This is because it was designed to be a very versatile specification capable of encoding permission conditions for a great variety of anticipated usage scenarios.

However, when digital rights permission code is used to provide actual services, it will be used in environments where there are practical limitations on computation and distribution resources, so it is necessary to take steps such as shortening the overall code length for the permission code to lower the cost of distribution resources and making the code length for individual permissions fixed-length so that computation can be more efficient.

Therefore, it is necessary to create guidelines for the individual permission code lengths within the overall digital rights permission code in order to restrict the length of the variable-length digital rights permission code defined in IEC 62227 when providing actual services.

To that end, this TR presents typical content usage scenarios anticipated for actual services and validates the permission code lengths for the usage conditions used in these scenarios to define restricted-length individual digital rights permission code profiles and presents guidelines for the use of digital rights permission code.

## 4.2 Purpose

The following applies to this Technical Report.

- The digital rights permission code lengths are fixed-length.
- The number of occurrences for each digital rights permission code unit are counted.

In addition to the scenarios that are supported under the existing digital rights management described in IEC 62227, the anticipated usage scenarios were selected based on usage scenarios required for a home server environment.

The specific usage scenarios specified in this Technical Report are the following:

- content purchase (see Figure 1); [IEC TR 62636:2009](#)
- rental with time or playback limits (see Figure 2); <https://playbook.ietf.org/standards/t/71d6a1a3-c5fd-43db-81d9-163489a4bfc5/iec-tr-62636-2009>
- subscription (see Figure 3);
- direct retrieval of content from a device: Scenario 1 (see Figure 4);
- direct retrieval of content from a device: Scenario 2 (see Figure 5);
- unlimited play (see Figure 6);
- preview (see Figure 7);
- multiple permissions for a multipart DCF (see Figure 8);
- inheritance (see Figure 9);
- export of OMA DRM content (see Figure 10);
- combinations of constraint elements (see Figure 11);
- FairPlay (see Figure 12);
- CPRM (see Figure 13);
- SAFIA (see Figure 14);
- ringtones (see Figure 15);
- download of content free with advertising (see Figure 16);
- streaming of content free with advertising (see Figure 17);
- giveaways (see Figure 18);
- coupons (discount points) (see Figure 19);
- privacy information disclosure (see Figure 20);
- copying 9 times with unlimited moving (see Figure 21);
- subscription games (see Figure 22);

- software rental (see Figure 23).

Detailed information about the digital rights permission code generated for each usage scenario is also provided in Annex B.

## 5 Usage scenarios

### 5.1 General

This clause presents the usage scenarios profiled in this report. The details of the permission units that were used in each scenario are described in Annex B.

### 5.2 Content purchase

Mr. S purchases a song from a content provider, downloads it, and plays it back on Device Y, which belongs to domain D, and he exports it to a CD, see Clauses B.2 to B.5, No.1

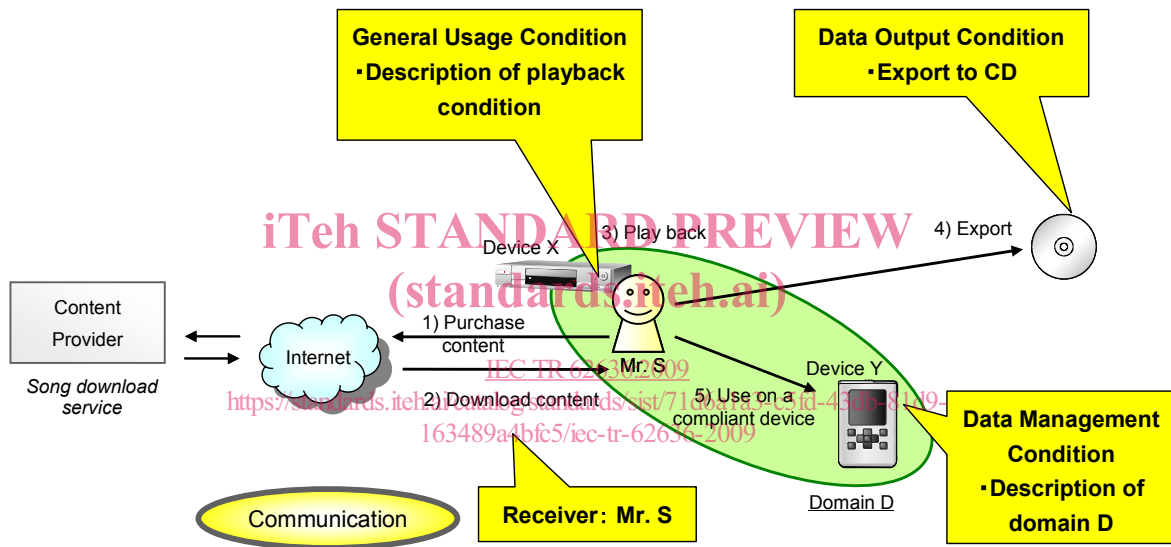

Figure 1 – Content purchase

### 5.3 Rental with time or playback limit

Mr. S rents video content from a content provider. He downloads it and plays it back. It has a playback condition stipulating that the playback time is limited to 48 h, see Clauses B.2 to B.4, No.2.
