About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 60 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

CONTENTS

FOREWORD.....	8
INTRODUCTION.....	11
1 Scope.....	13
2 Normative references	14
3 Terms and definitions	14
3.1 Gas properties and other physics.....	14
3.2 Types of equipment	16
3.3 Sensors and detectors	18
3.4 Supply of gas to instruments.....	19
3.5 Signals and alarms	19
3.6 Times, checks and equipment behaviour.....	20
3.7 Terms exclusive to open path equipment	21
4 Basic information on the properties, behaviour, gases and vapours, and specific applications of gas detection	23
4.1 Detecting gases and vapours	23
4.1.1 General	23
4.1.2 Safety when monitoring for flammable gases where personnel could be present	24
4.2 Some common properties of gases and vapours	25
4.3 The differences between detecting gases and vapours	26
4.3.1 General	26
4.3.2 Detection of gases	26
4.3.3 Detection of vapours.....	28
4.4 Oxygen deficiency.....	31
4.4.1 General	31
4.4.2 Chemical reaction of oxygen, with solid products	31
4.4.3 Chemical reaction of oxygen, with gaseous products	31
4.4.4 Dilution of the air by displacement by some other gas or vapour.....	32
4.5 Specific applications of gas detection	32
4.5.1 Gas detection as means of reducing risk of explosion.....	32
4.5.2 Gas free work permit	35
4.5.3 Monitoring of air inlets	36
4.6 Specific considerations for open path detection	36
5 Measuring principles.....	37
5.1 General.....	37
5.2 Catalytic sensors	39
5.2.1 General	39
5.2.2 Common applications	39
5.2.3 Limitations	39
5.2.4 Interferences	40
5.2.5 Poisoning	40
5.3 Thermal conductivity sensors.....	41
5.3.1 General	41
5.3.2 Common applications	41
5.3.3 Limitations.....	41
5.3.4 Interferences	41

5.3.5	Poisoning	41
5.4	Infrared sensors	41
5.4.1	General	41
5.4.2	Common applications	42
5.4.3	Limitations	42
5.4.4	Interferences	42
5.4.5	Poisoning	42
5.5	Semiconductor sensors	43
5.5.1	General	43
5.5.2	Common applications	43
5.5.3	Limitations	43
5.5.4	Interferences	43
5.5.5	Poisoning	43
5.6	Electrochemical sensors	44
5.6.1	General	44
5.6.2	Common applications	44
5.6.3	Limitations	44
5.6.4	Interferences	44
5.6.5	Poisoning	44
5.7	Flame ionization detectors (FID)	45
5.7.1	General	45
5.7.2	Common applications	45
5.7.3	Limitations	45
5.7.4	Interferences	45
5.7.5	Poisoning	45
5.8	Flame temperature analysers (FTA)	45
5.8.1	General	45
5.8.2	Common applications	45
5.8.3	Limitations	46
5.8.4	Interferences	46
5.8.5	Poisoning	46
5.9	Photo ionisation detector (PID)	46
5.9.1	General	46
5.9.2	Common applications	46
5.9.3	Limitations	46
5.9.4	Interferences	46
5.9.5	Poisoning	47
5.10	Paramagnetic oxygen detector	47
5.10.1	General	47
5.10.2	Common applications	47
5.10.3	Limitations	47
5.10.4	Interference	47
5.10.5	Poisoning	47
6	Selection of equipment	47
6.1	General	47
6.2	Selection criteria	48
6.2.1	General criteria	48
6.2.2	Gases to be detected by the equipment	49
6.2.3	Application of fixed equipment	50

6.2.4	Application of transportable and portable equipment.....	54
6.3	Miscellaneous factors affecting selection of equipment	55
6.3.1	Electromagnetic immunity.....	55
6.3.2	Intended Zone(s) of use.....	55
7	Behaviour of gas releases	55
7.1	Nature of a release	55
7.1.1	General	55
7.1.2	Release rate of gas or vapour.....	55
7.1.3	Flammable limits.....	56
7.1.4	Ventilation	56
7.1.5	Relative density of the released gas or vapour.....	56
7.1.6	Temperature and/or pressure.....	57
7.1.7	Other parameters to be considered.....	57
7.1.8	Outdoor sites and open structures	57
7.2	Buildings and enclosures	57
7.2.1	General	57
7.2.2	Unventilated buildings and enclosures.....	57
7.2.3	Ventilated buildings and enclosures.....	58
7.3	Environmental considerations	59
8	Design and installation of fixed gas detection systems.....	59
8.1	General.....	59
8.2	Basic considerations for the installation of fixed systems	59
8.2.1	General	59
8.2.2	Point detection equipment and remote sensors.....	60
8.2.3	Systems consisting of sampling equipment.....	60
8.2.4	Open path (line of sight) equipment	61
8.3	Location of detection points	61
8.3.1	General	61
8.3.2	General site considerations	61
8.3.3	Environmental conditions.....	62
8.4	Access for calibration and maintenance	65
8.5	Additional considerations for sample lines.....	65
8.6	Additional considerations for open path equipment	66
8.7	Summary of considerations for the location of measuring points and open paths	66
8.8	Installation of measuring point and open path equipment.....	67
8.9	Integrity and safety of fixed systems	67
8.9.1	General	67
8.9.2	Redundancy in fixed systems.....	68
8.9.3	Protection against loss of main power supply.....	68
8.10	Timing of installation during construction operations	68
8.11	Commissioning	68
8.11.1	Inspection.....	68
8.11.2	Initial gas calibration.....	69
8.11.3	Adjustment of alarm set points.....	69
8.12	Operating instructions, plans and records	70
9	Use of portable and transportable flammable gas detection equipment.....	70
9.1	General.....	70

9.2	Initial and periodic check procedures for portable and transportable instrumentation	71
9.2.1	General	71
9.2.2	Inspection and functional checks	72
9.2.3	Routine tests and recalibration	73
9.2.4	Maintenance and recalibration	73
9.3	Guidance on the use of portable and transportable equipment	74
9.3.1	Electrical safety in hazardous atmospheres	74
9.3.2	Safety of personnel	74
9.3.3	Spot tests and sampling	75
9.3.4	Sampling above liquids	75

INTERNATIONAL ELECTROTECHNICAL COMMISSION

EXPLOSIVE ATMOSPHERES –**Part 29-2: Gas detectors – Selection, installation, use
and maintenance of detectors for flammable gases and oxygen**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60079-29-2 has been prepared by IEC technical committee 31: Equipment for explosive atmospheres.

This second edition cancels and replaces the first edition published in 2007. This edition constitutes a technical revision.

This edition includes the following significant changes with respect to the previous edition:

Changes	Clause	Type		
		Minor and editorial changes	Extension	Major technical changes
Addition of group 1 to scope	1		x	
Addition of Open Path Gas Detection	3, 4.6, 5.4, 6.2.3.5, 8.2, 8.6, 8.7, 8.8, 11, A4		x	
Changed “combustible” to “flammable”	Throughout	x		
Addition of specific applications	4.5		x	
Improvements to sampling systems	6.2.3.4, 8.2.3, 8.5, 11.2.2	x		

NOTE The technical changes referred to include the significance of technical changes in the revised IEC Standard, but they do not form an exhaustive list of all modifications from the previous version. More guidance may be found by referring to the Redline Version of the standard.

Explanations:

- 1) **Minor and editorial changes** clarification
decrease of technical requirements
minor technical change
editorial corrections

These are changes which modify requirements in an editorial or a minor technical way. They include changes of the wording to clarify technical requirements without any technical change, or a reduction in level of existing requirement.

- 2) **Extension** addition of technical options

These are changes which add new or modify existing technical requirements, in a way that new options are given, but without increasing requirements for equipment that was fully compliant with the previous standard. Therefore, these will not have to be considered for products in conformity with the preceding edition.

NOTE These changes represent current technological knowledge. However, these changes should not normally have an influence on equipment already placed on the market.

- 3) **Major technical changes** addition of technical requirements
increase of technical requirements

These are changes to technical requirements (addition, increase of the level or removal) made in a way that a product in conformity with the preceding edition will not always be able to fulfil the requirements given in the later edition. These changes have to be considered for products in conformity with the preceding edition.

NOTE These changes represent current technological knowledge. However, these changes should not normally have an influence on equipment already placed on the market.

The text of this standard is based on the following documents:

FDIS	Report on voting
31/1169/FDIS	31/1179/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60079 series, published under the general title *Explosive atmospheres*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this standard may be issued at a later date.

INTRODUCTION

Flammable gas detection equipment may be used whenever there is the possibility of a hazard to life or property caused by the accumulation of a flammable gas-air mixture. Such equipment can provide a means of reducing the hazard by detecting the presence of a flammable gas and issuing suitable audible or visual warnings. Gas detectors may also be used to initiate precautionary steps (for example plant shutdown, evacuation, and operation of fire extinguishing procedures).

Equipment may be used to monitor a gas atmosphere below the lower flammable limit in circumstances where accumulation of gas may result in a concentration of the gas/air mixture to potentially explosive levels. Performance requirements for gas detecting equipment for such purposes are set out in IEC 60079-29-1 and IEC 60079-29-4. Guidance for functional safety of fixed gas detection systems are set out in IEC 60079-29-3.

However performance capability alone cannot ensure that the use of such equipment will properly safeguard life or property where flammable gases may be present. The level of safety obtained depends heavily upon correct selection, installation, calibration and periodic maintenance of the equipment, combined with knowledge of the limitations of the detection technique required. This cannot be achieved without responsible informed management.

An additional hazard to life is the toxicity of some gases and of the vapours of all liquids except water. It is not generally appreciated that all flammable vapours are potentially toxic at concentration levels which are very small fractions of their respective lower flammable limits. Equipment covered by IEC 60079-29-1 and IEC 60079-29-4 is not specifically intended for toxic protection, and additional personal protection precautions will normally be needed where personnel could be exposed to toxic vapours.

Portable equipment covered by IEC 60079-29-1 and IEC 60079-29-2 commonly have additional detectors for specific toxic gases and also for oxygen deficiency. Users are cautioned that even mild oxygen deficiency may be due to toxic concentrations of some other gas or vapour, which may not be detectable or adequately detected by the equipment in use.

General requirements for the handbook or manual of any particular flammable gas detection equipment are specified in IEC 60079-29-1 and IEC 60079-29-4. These standards provide some necessary background knowledge on the points mentioned above.

This standard has been specifically written to cover all the functions necessary from selection to ongoing maintenance for a successful gas detection operation. Different clauses are appropriate for different tasks within this range of operations. Each clause has been written as stand-alone as far as practicable. This means that some information is repeated in different clauses but with a different emphasis.

Table 1 gives a broad suggestion as to the most relevant clauses to the typical tasks to be performed.

Table 1 – Typical Tasks and Most Relevant Causes

Tasks	Definitions	Basic information properties of gas and vapours	Measuring principles	Selection of equipment	Behaviour of gas releases	Design and installation of fixed gas detection systems	Use of portable and transportable flammable gas detection equipment	Training of operational personnel	Maintenance, routine procedures General administrative control	Measuring principles (full detail) (normative)	Environmental parameters (informative)
Function (Clause)	3	4	5	6	7	8	9	10	11	Annex A	Annex B
Authorities	+	+++	+++	+	+	-	-	-	+	-	-
General management	+	+++	+++	+	+	-	-	+	+	-	+
Selection	+++	+++	+	+++	+++	+	++	-	+	+++	+++
Design engineering / management	+++	+++	+	+++	+++	+++	-	-	-	+++	+++
Installation engineering / management	+++	+++	+	++	+++	+++	-	-	-	+++	+++
Installation, technical	++	+++	++	++	++	++	-	-	-	+	++
Commissioning	+++	+++	++	+	++	+++	-	++	+	-	-
Operations management	++	+++	++	+	+	++	++	+++	+++	+	+++
Operation training	+++	+++	+	+	+	+++	+++	+++	+++	+++	+++

Repair	++	+++	++	+	+	++	++	+	+++	++	++
“+++” Most appropriate “++” Advisable “+” Useful “-“ Not applicable It should be noted that Clause 5 is a simplified version of Annex A.											

This standard makes recommendations on how to establish maintenance and calibration intervals. In certain countries there are mandatory general or industry-specific regulations which must be followed as a minimum requirement.
