Contents

Foreword 11

1 Scope 13

2 Normative references 13

3 Information from the client to the test laboratory 14

4 Other requirements for GSM mobile stations 14

5 Structure of the TBR 14

6 References to GSM core specifications 15

7 Abbreviations 16

8 General tests and procedures 18
8.1 Support and non-support of services 18
8.2 Support of single numbering scheme 19
8.3 IMEI Security 20

9 Spurious emissions 21
9.1 MS allocated a channel (conducted spurious emissions) 21
9.2 MS in idle mode (conducted spurious emissions) 22
9.3 MS allocated a channel (radiated spurious emissions) 23
9.4 MS in idle mode (radiated spurious emissions) 23

10 Transmitter 24
10.1 Phase error and frequency error 24
10.2 Frequency error under multipath and interference conditions 25
10.3 Peak transmitter carrier power and burst timing 26
10.4 Output RF spectrum, modulation and switching transients 28

11 Receiver 29
11.1 Sensitivity 29
11.1.1 Reference Sensitivity for TCH/FS 30
11.1.2 Reference sensitivity for Control Channel (CCH) 31
11.2 Usable Receiver Input Level Range 32
11.3 Co-channel rejection 32
11.3.1 TCH-Full Rate Speech 33
11.3.2 Control Channel 34
11.4 Adjacent channel rejection 34
11.4.1 Adjacent interferer 200 kHz (I2W) 34
11.4.2 Adjacent interferer 400 kHz (I4W) 36
11.5 Intermodulation rejection 38
11.6 Blocking and spurious response 39
11.6.1 TCH-Full Rate Speech 39
11.6.2 TCH Control Channel 40

12 Tests of Layer 2 signalling functions 41
12.1 Timing requirements and frame format 41
12.1.1 Timing requirements 41
12.1.2 Frame format 41
12.2 Initialisation when contention resolution required 42
12.2.1 Normal initialisation 42
12.2.2 Initialisation failure 43

iTeh STANDARD PREVIEW
(standards.iteh.ai)
SIST TBR 005 E1:2004
https://standards.iteh.ai/catalog/standards/sist/ab1e4085-c361-44f3-98ee-107b9c131ac8/sist-tbr-005-e1-2004

SIST TBR 005 E1:2004

12.2.2.1 Loss of UA frame 43
12.2.2.2 UA frame with different information field 44
12.2.2.3 Information frame or supervisory frames in response to an SABM frame 44
12.2.3 Initialisation denial 45
12.2.4 Total initialisation failure 46
12.3 Initialisation, contention resolution not required 46
12.3.1 Normal initialisation 47
12.3.2 Initialisation failure 47
12.3.3 Initialisation denial 48
12.3.4 Total initialisation failure 49
12.4 Normal information transfer 50
12.4.1 Sequence counting and I frame acknowledgements 50
12.4.2 Receipt of an I frame in the timer recovery state 51
12.4.3 Segmentation and concatenation 52
12.5 Normal Layer 2 disconnection 53
12.6 RR response frame loss (MS to SS) 53
12.7 Test of frame transmission with incorrect C/R value 54
12.8 Test of errors in the control field 55
12.9 Test on receipt of invalid frame 56

13 Initial Tests 57
13.1 Scheduling of the channel request transmission 57
13.1.1 Txinteger is low, non-combined case 57
13.1.2 Txinteger is low, combined case 59
13.1.3 Txinteger and Maxretrans are put to random values, non combined case 60
13.1.4 Txinteger and Maxretrans are put to random values, combined case 62
13.1.5 Test of random generator 63
13.2 IMSI detach/attach 63
13.2.1 IMSI attach and detach are not allowed, SIM remains continuously in the ME 64
13.2.2 IMSI attach and detach are not allowed, SIM is removed and put again 64
13.2.3 IMSI attach and detach are required, the MS is powered off 65
13.2.4 IMSI attach and detach are required, the MS is powered on 66
13.2.5 IMSI attach and detach are required, SIM is removed 67
13.2.6 IMSI attach and detach are required, SIM is inserted 68
13.3 Test of sequenced MM/CC message transfer 68

14 Test of MS functions in idle mode 69
14.1 MS indication of available PLMNs 69
14.2 MS will send only if BSS is "On air" 70

15 Test of L3 error handling 70
15.1 Errors in L3 messages 70
15.1.1 Wrong protocol discriminator 70
15.2 Test of MS reaction to errors in Transaction Identifier 71
15.2.1 Test of TI error in RR management message 71
15.2.2 Test of TI error in MM message 71
15.2.3 Test of TI error in CC message 72
15.2.3.1 Test of TI error in CC message - 1st case 72
15.2.3.2 Test of TI error in CC message - 2nd case 73
15.2.3.3 Test of TI error in CC message - 3rd case 73
15.2.3.4 Test of TI error in CC message - 4th case 74
15.3 Test of message type errors 74
15.3.1 Test of MS reaction to non-existent message type - CC protocol 74
15.3.2 Test of MS reaction to message inconsistent with Call Control PD 75
15.3.3 Test of MS reaction to message inconsistent with call state 76
15.4 Test of general information element errors 76
15.4.1 Test of MS response to duplicated Information Elements 76
15.5 Test of MS reaction to mandatory information element errors 77
15.5.1 Test of MS reaction to Mandatory Information Element errors in RR message 77

SIST TBR 005 E1:2004

15.5.1.1 Test of MS reaction to Mandatory Information Element errors in RR message - CHANNEL RELEASE 77
15.5.1.2 Test of MS reaction to Mandatory Information Element errors in RR message - CIPHER MODE COMMAND 77
15.5.2 Test of MS reaction to Mandatory Information Element errors in MM message 78
15.5.3 Test of MS reaction to Mandatory information Element errors in CC message 79
15.5.3.1 Test of MS reaction to Mandatory Information Element errors in CC message - 1st case 79
15.5.3.2 Test of MS reaction to Mandatory Information Element errors in CC message - 2nd case 79
15.5.3.3 Test of MS reaction to Mandatory Information Element errors in CC message - 3rd case 80
15.6 Test of MS reaction to non-mandatory information element errors 81
15.6.1 Test of MS reaction to non-mandatory information element errors in RR message 81
15.6.1.1 Test of MS reaction to unrecognized information element in RR message on a dedicated control channel - comprehension required 81
15.6.1.2 Test of MS reaction to unrecognized information element in RR message on a dedicated control channel - comprehension not required 81
15.6.2 Test of MS reaction to non-mandatory information element errors in MM message 82
15.6.2.1 Test of MS reaction to non-mandatory information element errors in MM messages - comprehension required 82
15.6.2.2 Test of MS reaction to non-mandatory information element errors in MM messages - comprehension not required 83
15.6.3 Test of MS reaction to non-mandatory information element errors in CC message 84
15.6.3.1 Test of MS reaction to non-mandatory information element errors in CC messages - 1st case 84
15.6.3.2 Test of MS reaction to non-mandatory information element errors in CC messages - 2nd case 84
15.6.3.3 Test of MS reaction to non-mandatory information element errors in CC messages - 3rd case 85
15.6.3.4 Test of MS reaction to non-mandatory information element errors in CC messages - 4th case 86
15.6.3.5 Test of MS reaction to non-mandatory information element errors in CC messages - 5th case 86

16 Elementary procedures for Radio Resource management 87
16.1 Immediate assignment 87
16.1.1 Assignment procedure 87
16.1.2 Extended assignment 88
16.1.3 Assignment rejection 89
16.1.4 Ignore assignment for another MS 90
16.2 Test of paging 91
16.2.1 Normal paging 91
16.2.1.1 Paging request type 1 91
16.2.1.2 Paging request type 2 92
16.2.1.3 Paging request type 3 94
16.2.1.4 MS with no more TMSI available 94
16.2.2 Extended paging 95
16.2.3 Paging reorganisation 96
16.2.4 No change of page mode 97
16.3 Measurement report 98
16.3.1 No neighbouring cells 98
16.3.2 All neighbours present 98
16.3.3 Combination of barred cells and un-permitted PLMNs 99

20.1.2 Reception Time Tracking Speed 202
20.2 Access Times During Handover 202
20.2.1 Intra-Cell Handover 202
20.2.2 Inter-Cell Handover 203
20.3 Temporary Reception Gaps 205
20.4 Channel Release after Unrecoverable Errors 206
20.5 Cell Selection/Reselection 207
20.5.1 Cell Selection 207
20.5.2 Cell Reselection 208
20.5.3 Cell Selection after Release of TCH and SDCCH 209
20.5.4 Cell Selection (Abnormal Cases and Emergency Calls) 210
20.6 RX Measurement 211
20.6.1 Signal Strength 211
20.6.2 Signal Quality 212
20.6.2.1 Signal Quality under Static Conditions 212
20.6.2.2 Signal Quality under TU50 Propagation Conditions 213
20.7 Power Control 214

21 Testing of the ME/SIM (subscriber identification module) interface 215
21.1 Test Sequence 1 215
21.2 Test Sequence 2 216
21.3 Test Sequence 3 217
21.4 Test Sequence 4 217
21.5 Test Sequence 5 218
21.6 Test Sequence 7 - Electrical Tests 219
21.6.1 Test of Power Transition Phases 219
21.6.1.1 Phase preceding ME Power-On 219
21.6.1.2 Phase during SIM Power-On 219
21.6.1.3 Phase During Power Off 220
21.6.2 Electrical Tests on each ME Contact 220
21.6.2.1 Electrical Tests on Contact C1 220
21.6.2.1.1 Test 1 220
21.6.2.1.2 Test 2 221
21.6.2.2 Electrical Tests on Contact C2 222
21.6.2.2.1 Test on contact C2 = low level RST 222
21.6.2.2.2 Test on contact C2 = high level RST 222
21.6.2.3 Electrical Tests on Contact C3 223
21.6.2.3.1 Test on contact C3 = CLK at low level 223
21.6.2.3.2 Test on contact C3 = CLK switch from low level to high level 223
21.6.2.3.3 Test on contact C3 = CLK at high level 224
21.6.2.3.4 Test on contact C3 = CLK switch from high level to low level 224
21.6.2.3.5 Clock cycle ratio test 225
21.6.2.4 Electrical Tests on Contact C6 (Vpp) * 225
21.6.2.5 Electrical Tests on Contact C7 (I/O) 226
21.7 Test Sequence 8 - Access Control 227
21.8 Test Sequence 9 - Exchange Protocol Tests 228
21.8.1 Character Transmission 228
21.8.1.1 Bit/Character duration during the transmission from the ME to the SIM. 228
21.8.1.2 Bit/Character duration during the transmission from the SIM to the ME. 229

SIST TBR 005 E1:2004

Foreword

This Technical Basis for Regulation (TBR) has been produced by the Special Mobile Group (SMG) Technical Committee of the European Telecommunications Standards Institute (ETSI). This TBR covers the general access requirements for terminal equipment for the Global System for Mobile communications (GSM) mobile services.

This TBR contains the procedures and requirements for the approval testing of GSM terminal equipment for access.

The requirements of other TBRs apply in addition to this TBR.

For each test, *SUPPLEMENTARY INFORMATION* is provided, giving a justification why this item has been selected for regulatory testing, and a reference to the relevant article of the Terminal Directive [1].

This TBR is based on the I-ETS 300 020-1 [2].

SIST TBR 005 E1:2004

1 Scope

This Technical Basis for Regulation (TBR) specifies the technical requirements to be met by terminal equipment capable of connection to a public telecommunications network. These requirements apply to terminals for phase 1 of the public land mobile radio service utilising constant envelope modulation, operating in the 900 MHz band with a channel separation of 200 kHz, and carrying 8 full rate traffic channels per carrier according to the Time Division Multiple Access (TDMA) principle.

The objective of this TBR is to cover the requirements for Global System for Mobile (GSM) communications access to the network.

For each conformance requirement, one or more test purposes are given. For each test purpose, a single reference is given to the test method in I-ETS 300 020-1 [2]. The requirements apply at the air interface and the SIM-ME interface for the access requirements, which may be stimulated to perform the tests by additional equipment if necessary.

The measurement uncertainty is handled, as described in I-ETS 300 020-1 [2].

This TBR covers the essential requirements of the Terminal Directive 91/263/EEC [1] Articles 4d, 4e, 4f. Non access related aspects of speech telephony, where Article 4g has been applied, are covered by TBR 9 [7].

The Terminal Directive 91/263/EEC [1] Articles 4a and 4b are covered by other directives, and, therefore, not by this TBR.

In this TBR, there are no EMC technical requirements in terms of the Terminal Directive 91/263/EEC [1], Article 4c.

iTeh STANDARD PREVIEW
(standards.iteh.ai)

NOTE: Technical Requirments for EMC performance and testing of the equipment are covered by the relevant standards applicable to the EMC Directive 89/336/EEC, Annex A.

SIST TBR 005 E1:2004

Terminal equipment may be subject to additional requirements in other Common Technical Regulations (CTR) depending on the equipments' functionality.

I-ETS 300 020-1 [2] constitutes the full conformance test suite for GSM. The verification of the conformance requirements in this TBR is based on the tests described in this reference. The set of requirements in I-ETS 300 020-1 [2] and the set of requirements in this TBR need not be identical.

2 Normative references

This TBR incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revision of any of these publications apply to the requirements specified in this TBR, only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.
