About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications, Just Published details all new publications released. Available online and once a month by email.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary

IEC Customer Service Centre - webstore.iec.ch/csc 61754-7-12014

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – FIBRE OPTIC CONNECTOR INTERFACES –

Part 7-1: Type MPO connector family – One fibre row

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC-National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or degional publication shall be clearly indicated in the latter.

 1. The corresponding national or degional publication shall be clearly indicated in the latter.

 1. The corresponding national or degional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61754-7-1 has been prepared by subcommittee 86B: Fibre optic interconnecting devices and passive components, of IEC technical committee 86: Fibre optics.

This first edition of IEC 61754-7-1, along with the first edition of IEC 61754-7-2, cancels and replaces the third edition of IEC 61754-7, published in 2008.

This first edition of IEC 61754-7-1 includes the one fibre row MPO variants, including the addition of active device receptacles and up-angled plugs.

The first edition of IEC 61754-7-2 will include the two fibre row MPO variants and related active device receptacles and up-angled plugs.

Following the publication of both IEC 61754-7-1 and IEC 61754-7-2, IEC 61754-7 will be withdrawn.

The text of this standard is based on the following documents:

FDIS	Report on voting
86B/3794A/FDIS	86B/3826/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all the parts in the IEC 61754 series, under the general title Fibre optic interconnecting devices and passive components - fibre optic connector interfaces, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed. withdrawn,
- iTeh STANDARD
- replaced by a revised edition, or PREVIEW
- amended.

FIBRE OPTIC INTERCONNECTING DEVICES AND PASSIVE COMPONENTS – FIBRE OPTIC CONNECTOR INTERFACES –

Part 7-1: Type MPO connector family – One fibre row

1 Scope

This part of IEC 61754 defines the standard interface dimensions for type MPO family of connectors with one row of fibres.

2 Description

The parent connector for type MPO connector family is a multiway plug characterized by a rectangular ferrule normally $6.4~\text{mm}\times2.5~\text{mm}$ which utilizes two pins of 0.7~mm diameter as its alignment. The variant in this standard provides a joint of 2 to 12 fibres by arraying them between two pin-positioning holes in the ferrule in a one-layer, (one-row) arrangement. The connector includes a push-pull coupling mechanism and a ferrule spring loaded in the direction of the optical axis. The connector has a single male key which may be used to orient and limit the relative position between the connector and the component to which it is mated.

Connector interfaces are configured using a female plug without pins, a male plug with pins fixed and an adaptor as shown in Figure 1. The female plug is intermateable with the male plug.

IEC 61754-7-1:2014

There are two angled-interface plugs one called down-angled and the other up-angled. They are defined for both male and female plugs. The up and down descriptors refer to the tilt direction of the ferrule's angled end-face relative to the fibre axis when looking toward the end-face with the plug's key feature on the top. For down-angled plugs, the angled surface faces slightly downward. For up-angled plugs, the angled surface faces slightly upward. These different angles affect intermateability for the two adaptor types. An opposed keyway adaptor mates two plugs with the keys in opposite orientations, for example one side keyway-up and the other keyway-down. In contrast, an aligned keyway adaptor mates two plugs with the keys at the same orientation. When using an opposed keyway adaptor with angled interfaces, two down-angled plugs or two up-angled plugs are connected. For aligned keyway adaptors with angled interfaces, one down-angled plug and one up-angled plug are connected.

Moreover, connector interfaces between the female plug and the male plug are configured by applying a backplane housing and a printed board housing instead of the adaptor.

Additionally, the female plug interface is intermateable with the active device receptacle.

3 Interfaces

This standard contains the following standard interfaces:

Interface IEC 61754-7-1-1: MPO female plug, down-angled interface for 2 to 12 fibres
Interface IEC 61754-7-1-2: MPO male plug, down-angled interface for 2 to 12 fibres
Interface IEC 61754-7-1-3: MPO adaptor interface – Opposed keyway configuration

Interface IEC 61754-7-1-4: MPO female plug, flat interface for 2 to 12 fibres

Interface IEC 61754-7-1-5: MPO male plug, flat interface for 2 to 12 fibres

Interface IEC 61754-7-1-6: MPO backplane housing interface

Interface IEC 61754-7-1-7: MPO printed board housing interface

Interface IEC 61754-7-1-8: MPO adaptor interface – Aligned keyway configuration

Interface IEC 61754-7-1-9: MPO active device receptacle, angled interface

Interface IEC 61754-7-1-10: MPO active device receptacle, flat interface

Interface IEC 61754-7-1-11: MPO female plug, up-angled interface for 2 to 12 fibres Interface IEC 61754-7-1-12: MPO male plug, up-angled interface for 2 to 12 fibres

The following interfaces are intermateable:

Female plugs	Adaptors/housings/ receptacles	Male plugs
61754-7-1-1	61754-7-1-3	61754-7-1-2
61754-7-1-11	61754-7-1-3	61754-7-1-12
61754-7-1-1	61754-7-1-8	61754-7-1-12
61754-7-1-11	61754-7-1-8	61754-7-1-2
61754-7-1-4	61754-7-1-3 and 61754-7-1-8	61754-7-1-5
61754-7-1-1 or 61754-7-1	61754-7-1-6 and 61754-7-1-7	61754-7-1-2 or 61754-7-1-12
61754-7-1-4	61754-7-1-6 and 7-1-7	61754-7-1-5
61754-7-1-1	61754-7-1-9	N/A
61754-7-1-4	61754-7-1-10	N/A

NOTE Connector interfaces with 2 to 12 fibres will intermate and will correctly align the lower defined numbers of optical datum targets (see Figure 4)

- ^a Each pin-hole shall accept a gauge pin as shown in Figure 5 to a depth of 5,5 mm with a maximum force of 1,7 N. In addition, two pin-holes of a plug shall accept a gauge as shown in Figure 5 to a depth of 5,5 mm with a maximum force of 3,4 N.
- b Dimension C is defined as the distance between two pin-hole centres.
- ^c Dimension I is given for a fibre endface centre of a plug end when not mated. It is noticed that a ferrule is movable by a certain axial compression force, and therefore dimension I is variable. Ferrule compression force shall be 7,8 N to 11,8 N when a position of the fibre endface from the datum Z is in the range of 8,2 mm to 8,4 mm.
- ^d The coupling sleeve shall be movable by a certain axial compression force. Dimension L is given for a coupling sleeve end when not mated. Coupling sleeve compression force shall be 2,9 N to 6,9 N when the position of the coupling sleeve endface from datum Z is in the range of 0 mm to 0,1 mm to the right or to the left of datum Z.
- ^e An adaptor coupling part shall be unlocked by a left-direction movement of a coupling sleeve, when it is separate from an adaptor. When the coupling sleeve is moved for unlocking, the position of the coupling sleeve endface shall be larger than 2,0 mm in the left direction from the datum Z.
- f Dimension I is defined at the centre line between the two pin-hole centres.
- ⁹ The mating/unmating force between an MPO plug and adaptor shall not exceed 30,0 N.
- ^h Dimensions D1 and U1 are defined only at the end of the plug as shown.
- The down-angled and up-angled plugs shall be clearly marked to distinguish them from each other and flat interfaces through the use of colour, labelling or other appropriate identification method. This identification method shall be visible when the plug is in the mated or unmated condition.
- Since angled MPO plugs require a Y-offset of the fibre holes in relation to the guide pin holes, and the Y-offset is referenced from the epoxy window of the ferrule, the angle shall be polished as a down-angle from the epoxy window. The orientation of the ferrule epoxy window may be reversed in the MPO plug to produce the up-angle variant

Figure 4 shows optical datum target location diagrams. Figure 5 shows the gauge pin and Table 2 shows its dimensions.

- $^{\rm a}$ Each guide pin shall be retained with a minimum force of 19,6 N. Surface roughness R_z shall be below 0,5 μm
- b Dimension C is defined as the distance between two guide-pin centres.
- Dimension I is given for a fibre endface centre of a plug end when not mated. It is noticed that a ferrule is movable by a certain axial compression force, and therefore the dimension I is variable. Ferrule compression force shall be 7,8 N to 11,8 N when a position of the fibre endface from the datum Z is in the range of 8,2 mm to 8.4 mm.
- ^d The coupling sleeve shall be movable by a certain axial compression force. Dimension L is given for a coupling sleeve end when not mated. Coupling sleeve compression force shall be 2,9 N to 6,9 N when the position of the coupling sleeve endface from datum Z is in the range of 0 mm to 0,1 mm to the right or to the left of datum Z.
- e An adaptor coupling part shall be unlocked by a left-direction movement of a coupling sleeve when it is separate from an adaptor. When the coupling sleeve is moved for unlocking, the position of the coupling sleeve endface shall be larger than 2,0 mm in the left direction from the datum Z.
- f The top shape of the guide-pin may be a round shape that is symmetrical about the guide-pin axis with a minimum radius of 0,15 mm.
- g Dimension I is defined at the centre line between the two guide-pin centres.
- h The mating/unmating force between an MPO plug and adaptor shall not exceed 30,0 N.
- Dimensions D1 and U1 are defined only at the end of the plug as shown.
- The down-angled and up-angled plugs shall be clearly marked to distinguish them from each other and flat interfaces through the use of colour, labelling or other appropriate identification method. This identification method shall be visible when the plug is in the mated or unmated condition.
- Since angled MPO plugs require a Y-offset of the fibre holes in relation to the guide pin holes, and the Y-offset is referenced from the epoxy window of the ferrule, the angle shall be polished as a down-angle from the epoxy window. The orientation of the ferrule epoxy window may be reversed in the MPO plug to produce the up-angle variant.
