### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

- Catalogue of IEC publications: [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The IEC on-line Catalogue enables you to search by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, withdrawn and replaced publications.

- IEC Just Published: [www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)

Stay up to date on all new IEC publications. Just Published details twice a month all new publications released. Available on-line and also by email.

- Electropedia: [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 20 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary online.

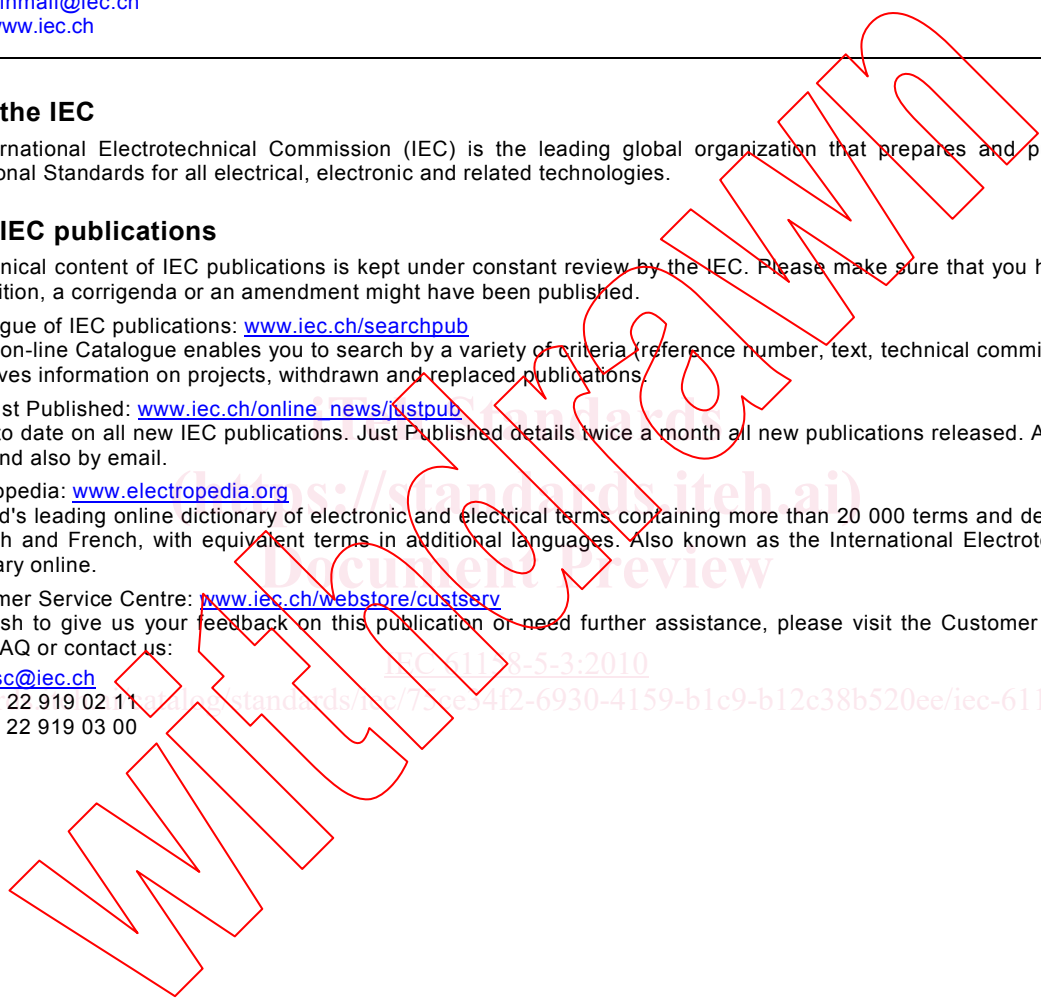

- Customer Service Centre: [www.iec.ch/webstore/custserv](http://www.iec.ch/webstore/custserv)

If you wish to give us your feedback on this publication or need further assistance, please visit the Customer Service Centre FAQ or contact us:

## CONTENTS

FOREWORD.....	11
INTRODUCTION.....	13
1 Scope.....	14
1.1 General.....	14
1.2 Overview.....	14
1.3 Specifications.....	15
1.4 Conformance.....	15
2 Normative references.....	15
3 Terms, definitions, abbreviations, symbols and conventions.....	16
3.1 Referenced terms and definitions.....	16
3.2 Fieldbus Application Layer type 3 – specific terms and definitions.....	17
3.3 Abbreviations and symbols.....	25
3.4 Conventions.....	25
4 Concepts.....	32
5 Data type ASE.....	32
6 Communication model specification.....	32
6.1 DP concepts.....	32
6.2 ASEs.....	52
6.3 Summary of FAL classes.....	430
6.4 Permitted FAL services by AREP role.....	431
6.5 Conformance classes.....	435
6.6 Application characteristics.....	436
Bibliography.....	438
Figure 1 – Example of DP communication with a single controlling device.....	35
Figure 2 – Example of DP communication with several controlling devices.....	35
Figure 3 – Example of DP communication between field devices.....	36
Figure 4 – DP-slave model (modular DP-slave).....	38
Figure 5 – DP-slave model (compact DP-slave).....	39
Figure 6 – Overview of application processes.....	40
Figure 7 – DP-slave model (modular DP-slave).....	41
Figure 8 – Application Service Elements (ASEs).....	43
Figure 9 – Application Process with application Objects (APOs).....	44
Figure 10 – Access to a remote APO.....	45
Figure 11 – Access to a remote APO for publisher/subscriber association.....	46
Figure 12 – Example of one AR with two AREPs.....	47
Figure 13 – Relation of a simple process data object to the real object.....	53
Figure 14 – Relation of a combined process data object to the real objects.....	55
Figure 15 – Sequence of an isochronous DP cycle with one DP-master (class 1).....	86
Figure 16 – Additional time relationships in a DP system operating in isochronous mode.....	88
Figure 17 – DP system with optimized isochronous DP cycle.....	89
Figure 18 – Buffered synchronized isochronous mode at the DP-master (class 1).....	91

Figure 19 – Enhanced synchronized isochronous mode at the DP-master (class 1) .....	92
Figure 20 – Input, output and PLL state machine interaction .....	92
Figure 21 – PLL state diagram .....	98
Figure 22 – OUTPUT state diagram .....	102
Figure 23 – INPUT state diagram .....	106
Figure 24 – Treatment of an alarm in the DP system .....	139
Figure 25 – Load Region state diagram for erasable memory .....	237
Figure 26 – Load region state diagram for non erasable memory .....	238
Figure 27 – Function invocation state diagram .....	270
Figure 28 – System architecture .....	284
Figure 29 – Assignment of communication relationship to application relationship .....	291
Figure 30 – MS0 application relationship .....	297
Figure 31 – Output buffer model of a DP-slave without sync functionality .....	298
Figure 32 – Output buffer model of a DP-slave with sync functionality .....	298
Figure 33 – Input buffer model of a DP-slave without freeze functionality .....	299
Figure 34 – Input buffer model of a DP-slave with freeze functionality .....	299
Figure 35 – MS1 application relationship .....	300
Figure 36 – MS2 application relationship .....	300
Figure 37 – Example of inter-network communication .....	302
Figure 38 – Example without inter-network addressing .....	302
Figure 39 – First example with inter-network addressing .....	303
Figure 40 – Second example with inter-network addressing .....	304
Figure 41 – MS3 application relationship .....	305
Figure 42 – MM1 application relationship .....	305
Figure 43 – MM2 application relationship .....	306
Figure 44 – Cycle time of the DP system .....	437
Table 1 – Requirements and features of fieldbus DP .....	34
Table 2 – Status values of the service primitives .....	51
Table 3 – Access Rights MS1 .....	54

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**INDUSTRIAL COMMUNICATION NETWORKS –  
FIELDBUS SPECIFICATIONS –****Part 5-3: Application layer service definition –  
Type 3 elements**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

NOTE 1 Use of some of the associated protocol types is restricted by their intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a particular data-link layer protocol type to be used with physical layer and application layer protocols in Type combinations as specified explicitly in the IEC 61784 series. Use of the various protocol types in other combinations may require permission from their respective intellectual-property-right holders.

International Standard IEC 61158-5-3 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This second edition cancels and replaces the first edition published in 2007. This edition constitutes a technical revision.

The main change with respect to the previous edition is listed below:

- Correction in 6.2.3.2.3.2 (referencing the error-codes in IEC 61158-6-3, 5.3.17 to maintain the codes only in one place).

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/606/FDIS	65C/620/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

A list of all parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

NOTE 2 The revision of this standard will be synchronized with the other parts of the IEC 61158 series.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**
