About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

- Catalogue of IEC publications: www.iec.ch/searchpub

The IEC on-line Catalogue enables you to search by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, withdrawn and replaced publications.

- IEC Just Published: www.iec.ch/online_news/justpub

Stay up to date on all new IEC publications. Just Published details twice a month all new publications released. Available on-line and also by email.

- Electropedia: www.electropedia.org

INTERNATIONAL STANDARD PREVIEW
(standards.iteh.ai)

The world's leading online dictionary of electronic and electrical terms containing more than 20 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary online.

INFORMATION TECHNOLOGY – UPNP DEVICE ARCHITECTURE –

Part 17-10: Quality of Service Device Control Protocol – Level 3 – Quality of Service Device Service

FOREWORD

- 1) ISO (International Organization for Standardization) and IEC (International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards. Their preparation is entrusted to technical committees; any ISO and IEC member body interested in the subject dealt with may participate in this preparatory work. International governmental and non-governmental organizations liaising with ISO and IEC also participate in this preparation.
- 2) In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.
- 3) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO member bodies.
- 4) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 5) In order to promote international uniformity, IEC and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 6) ISO and IEC provide no marking procedure to indicate their approval and cannot be rendered responsible for any equipment declared to be in conformity with an ISO/IEC publication.
<http://standards.iec.ch/catalog/standards/series/iso-iec-29341-17-10-2011>
cd96259038ca/iso-iec-29341-17-10-2011
- 7) All users should ensure that they have the latest edition of this publication.
- 8) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 9) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 10) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 29341-17-10 was prepared by UPnP Forum Steering committee¹, was adopted, under the fast track procedure, by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 29341 series, under the general title *Information technology – UPnP device architecture*, can be found on the IEC web site.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

¹ UPnP Forum Steering committee, UPnP Forum, 3855 SW 153rd Drive, Beaverton, Oregon 97006 USA. See also "Introduction".

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

iTeh STANDARD PREVIEW (standards.iteh.ai)

[ISO/IEC 29341-17-10:2011](#)
<https://standards.iteh.ai/catalog/standards/sist/bdfe91d2-3aea-4902-bd9e-cd96259038ca/iso-iec-29341-17-10-2011>

1 Overview and Scope

This service definition is compliant with the UPnP Device Architecture version 1.0.[DEVICE]

This service-type enables modeling of the ‘QosDevice’ function capabilities. The QosDevice:3 Service is a function typically implemented in source, sink and intermediate network. The [QosDevice](#) Service is responsible for providing the appropriate network resources to traffic streams and information about the state of the device as requested by the QosManager as defined in the QosManager:3 Service. [QM]

Several L2 Technologies were considered during the design of UPnP-QoS v3. These technologies are described in UPnP QosDevice:3 Underlying Technology Interface Addendum [QD_Add]. Every attempt was made to ensure that the design of version 3 would accommodate other L2 Technologies as well. Each L2 Technology on which UPnP-QoS version 3 is implemented is recommended to have a document that is compliant to the template in Annex B which specifies how the L2 Technology defines certain state variables, maps parameters, etc.

This document does not address the procedures for end-to-end set up of a new traffic stream or end-to-end revocation of an existing traffic stream. This procedure is defined in the UPnP QosManager:3 Service Document [QM].

1.1 Referenced Specifications

STANDARD PREVIEW

Unless explicitly stated otherwise herein, implementation of the mandatory provisions of any standard referenced by this specification shall be mandatory for compliance with this specification.

2 Service Modeling Definitions

2.1 ServiceType

The following service type identifies a service that is compliant with this template:

urn:schemas-upnp-org:service:*QosDevice:3*

The term ***QosDevice*** Service is used herein to refer to this type of service.

2.2 State Variables

Reader Note: For first-time reader, it may be more insightful to read the theory of operations first and then the action definitions before reading the state variable definitions.

2.2.1 XML Fragments as UPnP Arguments

UPnP-QoS often uses XML Fragments as arguments in UPnP actions. The containing UPnP data type is a **string**. This places restrictions on a string's content; it has to represent a well-formed XML fragment (this includes a complete XML document).

An XML fragment, in adherence to the UPnP V1.0 architecture [DEVICE], MUST be escaped by using the normal XML rules, [XML] Clause 2.4 Character Data and Markup, before embedding it in a SOAP request / response message or an event notification message. The XML escaping rules are summarized:

- The (<) character is encoded as (<)
- The (>) character is encoded as (>)
- The (&) character is encoded as (&)
- The ("") character is encoded as (")
- The ('') character is encoded as (')

In their XML fragments, implementations MAY use an explicit reference to appropriate namespaces.

^a R = Required, O = Optional, X = Non-standard

^b Values listed in this column are required. To specify standard optional values or to delegate assignment of values to the vendor, you must reference a specific instance of an appropriate table below.

2.2.2 A_ARG_TYPE_TrafficDescriptor

This required state variable is defined in the *QosManager* Service specification; it contains QoS related information for a traffic stream. Refer to [QM] for details of this state variable.

2.2.2.1 XML Schema Definition

This is a **string** containing an XML fragment. It contains information describing the traffic descriptor. The XML fragment in this argument MUST validate against the XML schema for *TrafficDescriptor* in the XML namespace "http://www.upnp.org/schemas/TrafficDescriptorv1.xsd" which is located at "http://www.upnp.org/schemas/qos/TrafficDescriptor-v3.xsd".

2.2.3 A_ARG_TYPE_TrafficDescriptorsPerInterface

This required state variable contains the list of traffic descriptors that are associated with a network interface on a given *QosDevice* Service.

2.2.3.1 XML Schema Definition

This is a **string** containing an XML fragment. The XML fragment in this argument MUST validate against the XML schema for `TrafficDescriptorsPerInterface` in the XML namespace

"<http://www.upnp.org/schemas/TrafficDescriptorsPerInterface.xsd>" which is located at "<http://www.upnp.org/schemas/qos/TrafficDescriptorsPerInterface-v2.xsd>".

2.2.3.2 Description of fields in the `TrafficDescriptorsPerInterface` structure

The `TrafficDescriptorsPerInterface` is a structure that consists of one or more entries of `TdInterfacePair`. `TdInterfacePair` lists one `TrafficDescriptor`, followed by the `InterfaceId` of the associated interface. Here are the details about these two parameters:

TrafficDescriptor: This required field describes a Traffic Descriptor associated with an Interface. An Interface can have multiple associated Traffic Descriptor objects.

InterfaceId: This is a required field of type **string**; its format is defined in clause 2.2.6.2.

2.2.3.3 Sample argument XML string

```
<?xml version="1.0" encoding="UTF-8"?>
<TrafficDescriptorsPerInterface
  xmlns="http://www.upnp.org/qos/tcip12/schemas/TrafficDescriptorsPerInterface.xsd"
  xmlns:td="http://www.upnp.org/schemas/TrafficDescriptorv1.xsd"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xsi:schemaLocation="http://www.upnp.org/schemas/TrafficDescriptorsPerInterface.xsd
  http://www.upnp.org/schemas/qos/TrafficDescriptorsPerInterface-v2.xsd">
  <TdInterfacePair>
    <TrafficDescriptor>
      <ISO/IEC 29341-17-10:2011
        <http://standards.itech.ai/catalog/standard/sis/bdfc91d2-3aea-4902-bd9e-
          cd96259038ca/iso-iec-29341-17-10-2011>
        <td:TrafficHandle>wxyz</td:TrafficHandle>
        <td:TrafficId>
          <td:SourceAddress>
            <td:Ipv4>192.168.1.50</td:Ipv4>
          </td:SourceAddress>
          <td:SourcePort>23</td:SourcePort>
          <td:DestinationAddress>
            <td:Ipv4>192.168.1.50</td:Ipv4>
          </td:DestinationAddress>
          <td:DestinationPort>23</td:DestinationPort>
          <td:IpProtocol>1</td:IpProtocol>
        </td:TrafficId>
        <td:AvailableOrderedTspecList>
          <td:Tspec>
            <td:TspecIndex>300</td:TspecIndex>
            <td:TrafficClass>AV</td:TrafficClass>
          </td:Tspec>
          <td:Tspec>
            <td:TspecIndex>2</td:TspecIndex>
            <td:TrafficClass>Audio</td:TrafficClass>
          </td:Tspec>
        </td:AvailableOrderedTspecList>
        <td:ActiveTspecIndex>300</td:ActiveTspecIndex>
        <td:TrafficImportanceNumber>5</td:TrafficImportanceNumber>
        <td:OptionalPolicyParams>
          <td:CpName>Amy's CP</td:CpName>
        </td:OptionalPolicyParams>
      </TrafficDescriptor>
      <InterfaceId>eth0</InterfaceId>
    </TdInterfacePair>
  </TrafficDescriptorsPerInterface>
```

2.2.4 A_ARG_TYPE_TrafficHandle

A_ARG_TYPE_TrafficHandle is a **string** to identify a traffic stream. Refer to the [QM] document for more details.

2.2.5 A_ARG_TYPE_NumTrafficDescriptors

This is an integer argument specifying the number of Traffic Descriptors contained in the accompanying *ListOfTrafficDescriptors*. Refer to the [QM] document for more details.

2.2.6 A_ARG_TYPE_QosDeviceCapabilities

This required structure contains information describing a device's QoS capabilities. Use of this state variable is discouraged for UPnP-QoS v3. For v3 *QosDevice* Services, the information contained in this state variable can also be found in the *A_ARG_TYPE_QosDeviceExtendedState* state variable.

2.2.6.1 XML Schema Definition

This is a **string** containing an XML fragment. It contains information describing the capabilities of the *QosDevice* Service. The XML fragment in this argument MUST validate against the XML schema for *QosDeviceCapabilities* in the XML namespace "http://www.upnp.org/schemas/QosDeviceCapabilities.xsd" which is located at "http://www.upnp.org/schemas/qos/QosDeviceCapabilities-v2.xsd".

iTeh STANDARD PREVIEW

2.2.6.2 Description of fields in the *QosDeviceCapabilities* structure

(standards.iteh.ai)

Interface: This is a required structure and defined as an XML element. This field describes a network interface on the *QosDevice* Service. An Interface definition is required for each interface supported by the device. IEC 29341-17-10-2011
http://standards.iteh.ai/catalog/standards/sist/bdfe91d2-3aea-4902-bd9e
cd96259038ca/iso-iec-29341-17-10-2011

MacAddress: This is an optional field. If a given interface has an associated MAC address, the *QosDevice* MUST provide this information here. It provides the MAC address of the Interface and is of type *MacAddressType* (defined in the schema).

InterfaceId: This is a required field. The value is of type **string** and MUST uniquely identify an interface within the *QosDevice* Service. Furthermore, the *InterfaceId* MUST remain the same for a given interface (L2 Technology) until the *QosDevice* Service reboots.

IanaTechnologyType: This is an optional integer field. The *IanaTechnologyType* (IANA uses the designation *IANAIfType*) is an integer assigned by IANA for any media type, such as a value of 6 for 802.3 media type or a value of 71 for 802.11 media type. The allowed integer values for this parameter are specified in [IANA].

AdmissionControlSupported: This is a required enumeration field. This field is maintained for backward compatibility. This field can report only one of two values "Yes" or "No".. QosManager:3 ignores the value of this field.

PacketTaggingSupported: This is a required enumeration field. *PacketTaggingSupported* field indicates whether the device is capable of tagging L2 priorities on the outgoing interface. This field can report only one of two values "Yes" or "No".

NativeQos: This is an optional enumeration field. To ensure backward compatibility, this field MUST contain one of the values (Prioritized, BestEffort).
