About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

CONTENTS

FOREWORD.....	10
INTRODUCTION.....	13
1 Scope.....	15
2 Normative references	16
3 Terms, definitions and abbreviated terms	19
3.1 Terms and definitions.....	19
3.2 Abbreviated terms.....	28
4 General requirements	28
4.1 General.....	28
4.2 Selection of equipment	29
4.2.1 General	29
4.2.2 Electrical equipment in compliance with the IEC 60439 series Switchgear	30
4.3 Electrical supply.....	30
4.3.1 General	30
4.3.2 AC supplies	30
4.3.3 DC supplies	30
4.3.4 Special supply systems	31
4.4 Physical environment and operating conditions.....	31
4.4.1 General	31
4.4.2 Electromagnetic compatibility (EMC)	31
4.4.3 Ambient air temperature	32
4.4.4 Humidity	32
4.4.5 Altitude	32
4.4.6 Contaminants	33
4.4.7 Ionizing and non-ionizing radiation	33
4.4.8 Vibration, shock, and bump	33
4.5 Transportation and storage	33
4.6 Provisions for handling	33
4.7 Installation	
5 Incoming supply conductor terminations and devices for disconnecting and switching off	33
5.1 Incoming supply conductor terminations.....	33
5.2 Terminal for connection to of the external protective earthing system conductor.....	34
5.3 Supply disconnecting (isolating) device.....	34
5.3.1 General	34
5.3.2 Type	35
5.3.3 Requirements	35
5.3.4 Operating means of the supply disconnecting device	36
5.3.5 Excepted circuits	37
5.4 Devices for switching off removal of power for prevention of unexpected start-up	37
5.5 Devices for disconnecting isolating electrical equipment	38
5.6 Protection against unauthorized, inadvertent and/or mistaken connection	39
6 Protection against electric shock	39

6.1	General.....	39
6.2	Basic protection against direct contact	39
6.2.1	General	39
6.2.2	Protection by enclosures	40
6.2.3	Protection by insulation of live parts	41
6.2.4	Protection against residual voltages	41
6.2.5	Protection by barriers	41
6.2.6	Protection by placing out of reach or protection by obstacles	41
6.3	Fault protection against direct contact	42
6.3.1	General	42
6.3.2	Prevention of the occurrence of a touch voltage	42
6.3.3	Protection by automatic disconnection of supply	42
6.4	Protection by the use of PELV	43
6.4.1	General requirements	43
6.4.2	Sources for PELV	44
7	Protection of equipment.....	44
7.1	General.....	44
7.2	Overcurrent protection	45
7.2.1	General	45
7.2.2	Supply conductors	45
7.2.3	Power circuits	45
7.2.4	Control circuits	45
7.2.5	Socket outlets and their associated conductors	46
7.2.6	Lighting circuits	46
7.2.7	Transformers	46
7.2.8	Location of overcurrent protective devices	46
7.2.9	Overcurrent protective devices	46
7.2.10	Rating and setting of overcurrent protective devices	47
7.3	Protection of motors against overheating	47
7.3.1	General	47
7.3.2	Overload protection	47
7.3.3	Over-temperature protection	48
	7.3.4 Current limiting protection	48
7.4	Protection against abnormal temperature protection	48
7.5	Protection against the effects of supply interruption or voltage reduction and subsequent restoration	48
7.6	Motor overspeed protection.....	49
7.7	Additional earth fault/residual current protection	49
7.8	Phase sequence protection.....	49
7.9	Protection against overvoltages due to lightning and to switching surges	49
7.10	Short-circuit current rating	50
8	Equipotential bonding	50
8.1	General.....	50
8.2	Protective bonding circuit.....	53
8.2.1	General	53
8.2.2	Protective conductors	54
8.2.3	Continuity of the protective bonding circuit	55
	8.2.4 Exclusion of switching devices from the protective bonding circuit	55
8.2.4	Protective conductor connecting points.....	56

8.2.5	Parts that need not to be connected to the protective bonding circuit	
8.2.5	Mobile machines	56
8.2.6	Additional protective bonding requirements for electrical equipment having earth leakage currents higher than 10 mA a.c. or d.c.	56
8.3	Measures to limit restrict the effects of high leakage current	57
8.4	Functional bonding	57
9	Control circuits and control functions	58
9.1	Control circuits	58
9.1.1	Control circuit supply	58
9.1.2	Control circuit voltages	58
9.1.3	Protection	58
9.2	Control functions	58
9.2.1	Start functions General	58
9.2.2	Categories of stop functions	59
9.2.3	Operation	59
9.2.4	Cableless control system (CCS)	63
9.2.6	Other control functions	
9.3	Protective interlocks	66
9.3.1	Reclosing or resetting of an interlocking safeguard	66
9.3.2	Exceeding operating limits	66
9.3.3	Operation of auxiliary functions	66
9.3.4	Interlocks between different operations and for contrary motions	66
9.3.5	Reverse current braking	66
9.3.6	Suspension of safety functions and/or protective measures	66
9.4	Control functions in the event of failure	67
9.4.1	General requirements	67
9.4.2	Measures to minimize risk in the event of failure	68
9.4.3	Protection against maloperation due to earth faults, voltage interruptions and loss of circuit continuity malfunction of control circuits	70
10	Operator interface and machine-mounted control devices	77
10.1	General	77
10.1.1	General device requirements	77
10.1.2	Location and mounting	77
10.1.3	Protection	77
10.1.4	Position sensors	77
10.1.5	Portable and pendant control stations	78
10.2	Push-buttons Actuators	78
10.2.1	Colours	78
10.2.2	Markings	79
10.3	Indicator lights and displays	80
10.3.1	General	80
10.3.2	Colours	81
10.3.3	Flashing lights and displays	81
10.4	Illuminated push-buttons	81
10.5	Rotary control devices	82
10.6	Start devices	82
10.7	Emergency stop devices	82
10.7.1	Location of emergency stop devices	82
10.7.2	Types of emergency stop device	82

10.7.3	Colour of actuators	
10.7.3	Local Operation of the supply disconnecting device to effect emergency stop	82
10.8	Emergency switching off devices	83
10.8.1	Location of emergency switching off devices	83
10.8.2	Types of emergency switching off device	83
10.8.3	Colour of actuators	
10.8.3	Local operation of the supply disconnecting device to effect emergency switching off	83
10.9	Enabling control device	83
11	Controlgear: location, mounting, and enclosures	84
11.1	General requirements	84
11.2	Location and mounting	84
11.2.1	Accessibility and maintenance	84
11.2.2	Physical separation or grouping	84
11.2.3	Heating effects	85
11.3	Degrees of protection	85
11.4	Enclosures, doors and openings	86
11.5	Access to controlgear electrical equipment	87
12	Conductors and cables	87
12.1	General requirements	87
12.2	Conductors	87
12.3	Insulation	88
12.4	Current-carrying capacity in normal service	89
12.5	Conductor and cable voltage drop	90
12.6	Flexible cables	91
12.6.1	General	91
12.6.2	Mechanical rating	91
12.6.3	Current-carrying capacity of cables wound on drums	91
12.7	Conductor wires, conductor bars and slip-ring assemblies	92
12.7.1	Basic protection against direct contact	92
12.7.2	Protective conductors circuit	92
12.7.3	Protective conductor current collectors	93
12.7.4	Removable current collectors with a disconnecter function	93
12.7.5	Clearances in air	93
12.7.6	Creepage distances	93
12.7.7	Conductor system sectioning	93
12.7.8	Construction and installation of conductor wire, conductor bar systems and slip-ring assemblies	93
13	Wiring practices	94
13.1	Connections and routing	94
13.1.1	General requirements	94
13.1.2	Conductor and cable runs	95
13.1.3	Conductors of different circuits	95
13.1.4	AC circuits – Electromagnetic effects (prevention of eddy currents)	95
13.1.5	Connection between pick-up and pick-up converter of an inductive power supply system	95
13.2	Identification of conductors	96
13.2.1	General requirements	96

13.2.2	Identification of the protective conductor / protective bonding conductor	96
13.2.3	Identification of the neutral conductor	97
13.2.4	Identification by colour.....	97
13.3	Wiring inside enclosures	98
13.4	Wiring outside enclosures	98
13.4.1	General requirements	98
13.4.2	External ducts	98
13.4.3	Connection to moving elements of the machine	98
13.4.4	Interconnection of devices on the machine	100
13.4.5	Plug/socket combinations	100
13.4.6	Dismantling for shipment	101
13.4.7	Additional conductors	101
13.5	Ducts, connection boxes and other boxes	101
13.5.1	General requirements	101
13.5.2	Percentage of fill of ducts	102
13.5.2	Rigid metal conduit and fittings	102
13.5.3	Flexible metal conduit and fittings.....	102
13.5.4	Flexible non-metallic conduit and fittings	102
13.5.5	Cable trunking systems	102
13.5.6	Machine compartments and cable trunking systems.....	103
13.5.7	Connection boxes and other boxes	103
13.5.8	Motor connection boxes.....	103
14	Electric motors and associated equipment.....	103
14.1	General requirements	103
14.2	Motor enclosures	103
14.3	Motor dimensions.....	103
14.4	Motor mounting and compartments	104
14.5	Criteria for motor selection.....	104
14.6	Protective devices for mechanical brakes	104
15	Accessories Socket-outlets and lighting.....	105
15.1	Socket-outlets for accessories	105
15.2	Local lighting of the machine and of the equipment	105
15.2.1	General	105
15.2.2	Supply	105
15.2.3	Protection	106
15.2.4	Fittings	106
16	Marking, warning signs and reference designations	106
16.1	General.....	106
16.2	Warning signs	106
16.2.1	Electric shock hazard	106
16.2.2	Hot surfaces hazard	107
16.3	Functional identification	107
16.4	Marking of enclosures of electrical equipment.....	108
16.5	Reference designations	108
17	Technical documentation	108
17.1	General.....	108
17.2	Information to be provided related to the electrical equipment	109
17.3	Requirements applicable to all documentation	109

17.4	Installation documents	112
17.5	Overview diagrams and function diagrams	112
17.6	Circuit diagrams	112
17.7	Operating manual	112
17.8	Maintenance manual	112
17.9	Parts list	112
18	Verification	112
18.1	General	112
18.2	Verification of conditions for protection by automatic disconnection of supply	113
18.2.1	General	113
18.2.2	Test methods in TN-systems	114
18.2.2	Test 1 – Verification of the continuity of the protective bonding circuit	114
18.2.3	Test 2 – Fault loop impedance verification and suitability of the associated overcurrent protective device	114
18.2.4	Application of the test methods for TN-systems	114
18.3	Insulation resistance tests	117
18.4	Voltage tests	118
18.5	Protection against residual voltages	118
18.6	Functional tests	118
18.7	Retesting	118
Annex A (normative)	Protection against indirect contact in TN-systems Fault protection by automatic disconnection of supply	119
A.1	Fault protection for machines supplied from TN-systems	119
A.1.1	General	119
A.1.2	Conditions for protection by automatic disconnection of the supply by overcurrent protective devices	120
A.1.3	Condition for protection by reducing the touch voltage below 50 V	121
A.1.4	Verification of conditions for protection by automatic disconnection of the supply	121
A.2	Fault protection for machines supplied from TT-systems	124
A.2.1	Connection to earth	124
A.2.2	Fault protection for TT systems	124
A.2.3	Verification of protection by automatic disconnection of supply using a residual current protective device	126
A.2.4	Measurement of the fault loop impedance (Z_S)	126
Annex B (informative)	Enquiry form for the electrical equipment of machines	128
Annex C (informative)	Examples of machines covered by this part of IEC 60204	132
Annex D (informative)	Current-carrying capacity and overcurrent protection of conductors and cables in the electrical equipment of machines	134
D.1	General	134
D.2	General operating conditions	134
D.2.1	Ambient air temperature	134
D.2.2	Methods of installation	134
D.2.3	Grouping	136
D.2.4	Classification of conductors	137
D.3	Co-ordination between conductors and protective devices providing overload protection	137
D.4	Overcurrent protection of conductors	138
D.5	Effect of harmonic currents on balanced three-phase systems	139
Annex E (informative)	Explanation of emergency operation functions	140

Annex F (informative) Guide for the use of this part of IEC 60204	141
F.1 General	141
Annex G (informative) Comparison of typical conductor cross-sectional areas	143
Annex H (informative) Measures to reduce the effects of electromagnetic influences	145
H.1 Definitions	145
H.1.1 apparatus	145
H.1.2 fixed installation	145
H.2 General.....	145
H.3 Mitigation of electromagnetic interference (EMI)	145
H.3.1 General	145
H.3.2 Measures to reduce EMI.....	146
H.4 Separation and segregation of cables	146
H.5 Power supply of a machine by parallel sources	150
H.6 Supply impedance where a Power Drive System (PDS) is used	150
Annex I (informative) Documentation / Information	151

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**SAFETY OF MACHINERY –
ELECTRICAL EQUIPMENT OF MACHINES –****Part 1: General requirements**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

This redline version of the official IEC Standard allows the user to identify the changes made to the previous edition. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

International Standard IEC 60204-1 has been prepared by IEC technical committee 44: Safety of machinery – Electrotechnical aspects.

This sixth edition cancels and replaces the fifth edition published in 2005. It constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) added requirements to address applications involving power drive systems (PDS);
- b) revised electromagnetic compatibility (EMC) requirements;
- c) clarified overcurrent protection requirements;
- d) requirements for determination of the short circuit current rating of the electrical equipment;
- e) revised protective bonding requirements and terminology;
- f) reorganization and revision to Clause 9, including requirements pertaining to safe torque off of PDS, emergency stop, and control circuit protection;
- g) revised symbols for actuators of control devices;
- h) revised technical documentation requirements;
- i) general updating to current special national conditions, normative standards, and bibliographical references.

The text of this standard is based on the following documents:

FDIS	Report on voting
44/765/FDIS	44/771/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table. <https://standards.iteh.ai/catalog/standards/iec/ce9c4b09-1552-4cae-a57fb1652e9052ea/iec-60204-1-2016>

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 60204 series, published under the general title *Safety of machinery – Electrical equipment of machines*, can be found on the IEC website.

The following differing practices of a less permanent nature exist in the countries indicated below.

- 4.3.1: The voltage characteristics of electricity supplied by public distribution systems in Europe are given in EN 50160:2010.
- 5.1: Exception is not allowed (USA).
- 5.1: TN-C systems are not permitted in low-voltage installations in buildings (Norway).
- 5.2: Terminals for the connection of the protective earthing conductors may be identified by the colour green, the letters “G” or “GR” or “GRD” or “GND”, or the word “ground” or “grounding”, or with the graphical symbol IEC 60417-5019:2006-08 or any combination (USA).
- 6.3.3 b), 13.4.5 b), 18.2.1: TT power systems are not allowed (USA).
- 6.3.3, 18.2, Annex A: TN systems are not used. TT systems are the national standard (Japan).
- 6.3.3 b): The use of residual current protective devices with a rated residual operating current not exceeding 1 A is mandatory in TT systems as a means for fault protection by automatic disconnection of supply (Italy).

- 7.2.3: Disconnection of the neutral conductor is mandatory in a TN-S system (France and Norway).
- 7.2.3: Third paragraph: distribution of a neutral conductor with an IT system is not allowed (USA and Norway).
- 7.10: For evaluation of short circuit ratings the requirements of UL 508A Supplement SB, may be used (USA).
- 8.2.2: See IEC 60364-5-54:2011, Annex E List of notes concerning certain countries.
- 9.1.2: Maximum nominal AC control circuit voltage is 120 V (USA).
- 12.2: Only stranded conductors are allowed on machines, except for 0,2 mm² solid conductors within enclosures (USA).
- 12.2: The smallest power circuit conductor allowed on machines is 0,82 mm² (AWG 18) in multiconductor cables or in enclosures (USA).
- Table 5: Cross-sectional area is specified in NFPA 79 using American Wire Gauge (AWG) (USA). See Annex G.
- 13.2.2: For the protective conductor, the colour identification GREEN (with or without YELLOW stripes) is used as equivalent to the bicolour combination GREEN-AND-YELLOW (USA and Canada).
- 13.2.3: The colour identification WHITE or GREY is used for earthed neutral conductors instead of the colour identification BLUE (USA and Canada).
- 15.2.2: First paragraph: Maximum value between conductors 150 V (USA).
- 15.2.2: Second paragraph, 5th bullet: The full load current rating of lighting circuits does not exceed 15 A (USA).
- 16.4: Nameplate marking requirements (USA).
- A.2.2.2: The permissible maximum value of R_A is regulated (e.g. when $U_o \geq 300V$, R_A shall be less than 10 Ω , when $U_o < 300 V$, R_A shall be less than 100 Ω , U_o is the nominal AC line to earth voltage in volts (V) (Japan).
- A.2.2.2: The maximum permissible value of R_A is 83 Ω (Netherlands).

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.
