Space data and information transfer systems — Time code formats

Systèmes de transfert des informations et données spatiales — Formats des codes horaires

INTERNATIONAL ISO

Reference number
ISO 11104:1991(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 11104 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Sub-Committee SC 13, *Space data and information transfer systems*.

Space data and information transfer systems — Time code formats

1 Scope

This International Standard specifies the requirements for time code formats for space data and information transfer systems for civil space applications.

2 Requirements

The requirements specified are the technical recommendations made in the following publication, which is adopted as an International Standard:

CCSDS 301.0-B-2 (issue 2) April 1990, *Recommendation for space data systems standards — Time code formats.*[1)]

For the purposes of international standardization, the modification outlined below shall apply to the specific pages of publication CCSDS 301.0-B-2.

Pages i to iv

This part is information which is relevant to the CCSDS publication only.

3 Revision of publication CCSDS 301.0-B-2

It has been agreed with the Consultative Committee for Space Data Systems that Sub-Committee ISO/TC 20/SC 13 will be consulted in the event of any revision or amendment of publication CCSDS 301.0-B-2. To this end, NASA will act as a liaison body between CCSDS and ISO.
