# INTERNATIONAL STANDARD

Second edition 1997-11-01

## Grooved pins — Full-length taper grooved

Goupilles cannelées à cannelures progressives sur toute la longueur (débouchantes)

## iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>ISO 8744:1997</u> https://standards.iteh.ai/catalog/standards/sist/7a4c9f92-902e-4000-bf44-89f93074f3c6/iso-8744-1997

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and nongovernmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8744 was prepared by Technical Committee VIEW ISO/TC 2, Fasteners. (standards.iteh.ai)

This second edition cancels and replaces the first edition (ISO 8744:1986), which has been technically revised. ISO 8744:1997

## Grooved pins — Full-length taper grooved

## 1 Scope

, from 1,5 mm to 25 mm inclusive.

The displaced material to each side of the grooves forming an expanded diameter,  $d_2$ , which is larger than the nominal diameter  $d_1$  will cause a non-positive locking fit when these grooved pins are forced into a drilled hole equal to the nominal diameter  $d_1$  (see clause 4).

### 2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this International Standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 3269:1988, Fasteners – Acceptance inspection lards.iteh.ai)

## **3** Dimensions

See figure 1 and table 1.

- 1) Chamfer permissible
- 2) The grooving angle 70° applies only to grooved pins made from steel as shown in clause 5. The grooving angle may be modified depending on resilience of material

Figure 1

|   |         | ly to groe |      |            |         |          |            |            |                 |                |                     |          |       |      |      |

1) Applies only to grooved pins made from steel as shown in clause 5.

2) The range of commercial lengths is between the stepped lines.

3) The expanded diameter  $d_2$  applies only to pins made from steel as shown in clause 5. For other materials, for example stainless steel, a reduction amount shall be subtracted from the given values and should be agreed between customer and supplier.

4) For testing  $d_2$ , a GO/NO GO ring gauge should be used.

The diameter of the hole into which the groove pin is to be inserted shall be equal to the nominal diameter  $d_1$  of the mating pin and to tolerance class H11.

## **5** Requirements and reference International Standards

See table 2.

| Material <sup>1)</sup>                                      | Steel (St)  | Austenitic stainless steel   |  |  |  |  |
|---|---|--|--|--|--|--|
|   | Hardness 125 HV30 to 245 HV30   | A1 in accordance with ISO 3506-1,<br>hardness 210 HV30 to 280 HV30 |  |  |  |  |
| Grooves   | Form of groove at the discretion of the supplier  |  |  |  |  |  |
|   | Plain, i.e. pins to be supplied in natural finish<br>treated with a protective lubricant, unless<br>otherwise specified by agreement between<br>customer and supplier.  |  |  |  |  |  |
| Surface finish  | Preferred coatings are black oxide, phosphate<br>coating or zinc plating with chromate conver-<br>sion coating (see ISO 9717 and ISO 4042).<br>(standards.iten.al)<br>Other coatings as agreed between customer<br>and supplier.<br><u>ISO 8744:1997</u><br>All tolerances shall apply prior to the 9192-902e-4<br>application of a plating or coating.1997 | Plain, i.e. pins to be supplied in natural finish.                 |  |  |  |  |
| Workmanship   | Pins shall be free of irregularities or detrimental   | defects.   |  |  |  |  |
| Shear strength test   | The test shall be in accordance with ISO 8749.  |  |  |  |  |  |
| Acceptability   | The acceptance procedure is covered in ISO 326  | 69.  |  |  |  |  |
| 1) Other materials as agreed between customer and supplier. |   |  |  |  |  |  |

## 6 Designation

#### EXAMPLE 1

A full-length taper grooved steel pin with nominal diameter  $d_1 = 6$  mm and nominal length l = 50 mm is designated as follows:

## Grooved pin ISO $8744 - 6 \times 50 - St$

## EXAMPLE 2

A full-length taper grooved austenitic stainless steel pin of grade A1, with nominal diameter  $d_1 = 6$  mm and nominal length l = 50 mm is designated as follows:

## Grooved pin ISO 8744 - 6 × 50 - A1
