

Designation: A 1025 – 02

Standard Specification for Ferroalloys, General Requirements¹

This standard is issued under the fixed designation A 1025; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last approval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers a group of common requirements that, unless otherwise specified in an individual specification, shall apply to ferroalloys and other charge materials under each of the following ASTM specifications:

Title of Specification	ASTM Designation
Ferromanganese	A 99
Ferrosilicon	A 100
Ferrochromium	A 101
Ferrovandium	A 102
Ferromolybdenum	A 132
Molybdenum oxide products	A 146
Ferroboration	A 323
Ferrotitanium	A 324
Chromium metal	A 481
Ferrosilicon-chromium	A 482
Silicomanganese	A 483
Calcium-silicon alloys	A 495
Ferrocolumbium	A 550
Electrolytic manganese metal	A 601
Nickel oxide sinter	A 636
Ferromanganese silicon	A 701
Titanium scrap for use in deoxidation and alloying of steel	A 845
Aluminum scrap for use in deoxidation and alloying of steel	A 846
Silicon metal	A 922

1.2 This specification also covers a group of supplementary requirements which may be applied to the above specifications as indicated therein. These are provided for use when additional testing or inspection is desired and apply only when specified individually by the purchaser in the order.

1.3 In case of conflict between the requirements of the individual specification and this general specification, the former shall prevail.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory requirements prior to use.*

3. Ordering Information

3.1 Orders for material should include the following as required, to describe the material adequately:

- 3.1.1 ASTM designation and year of issue,
- 3.1.2 Grade of material,
- 3.1.3 Size of material,
- 3.1.4 Quantity,
- 3.1.5 Packaging requirements, and
- 3.1.6 Supplementary requirements desired, including the standards of acceptance.

⁴ *Annual Book of ASTM Standards*, Vol 03.05.

4. Chemical Analysis

4.1 The chemical analysis method shall be agreed upon by the purchaser and supplier.

4.2 The manufacturer shall furnish a certificate referencing the chemical analysis and appropriate supplementary requirements in the material specification.

4.3 For purposes of determining conformance with this specification, the reported analysis shall be rounded to the nearest unit in the last right-hand place of figures, used in expressing the limiting value, in accordance with the rounding method of Practice E 29.

5. Sampling

5.1 Unless otherwise specified, the material shall be sampled for determination of chemical composition in accordance with Practices E 32 and for determination of size in accordance with Test Methods A 610.

5.2 In the case of a discrepancy, Practices E 32 or Test Methods A 610, as applicable, shall be used for referee.

6. Inspection

6.1 The manufacturer shall afford the inspector representing the purchaser all reasonable facilities, without charge, to satisfy

the purchaser that the material is being furnished in accordance with the material specification.

7. Rejection

7.1 Any rejections based on tests made in accordance with the material specification shall be reported to the manufacturer within 45 days from receipt of material by the purchaser.

8. Certification

8.1 The manufacturer's certification shall be furnished to the purchaser at the time of shipment stating that the material was manufactured, sampled, tested, and inspected in accordance with the material specification and was found to meet the requirements.

9. Packaging and Package Marking

9.1 Each lot/shipment shall be identified with appropriate identification showing the material, the ASTM designation, the size, the lot number, and name brand or trademark.

9.2 When the shipment is made in containers, each shall be marked on the container or on a label or tag attached to the container.

10. Keywords

10.1 ferroalloy; general requirements

SUPPLEMENTARY REQUIREMENTS

The following standardized supplementary requirements are for use when desired by the purchaser and when allowed by and listed in the individual specifications. They shall not apply unless specified in order, in which event the specified tests shall be made by the manufacturer before shipping.

S1. Supplementary Chemical Requirements

S1.1 Restrictions on the chemical requirements shall be agreed upon by the purchaser and supplier.

S2. Size

S2.1 Screened products shall conform to the sizes given in Table S2.1.

S2.2 The sizes listed in Table S2.1 are typical as shipped from the manufacturer's plant. The size and friability of the product shall be agreed upon by the purchaser and supplier.

NOTE —Ferroalloys exhibit varying degrees of friability; therefore, some attrition may be expected in transit and handling. A quantitative test is not available for rating friability of ferroalloys. A code system has been developed for this purpose, and a number rating for each product type is given.
