About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 14 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 55 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 14 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

Plus de 55 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: csc@iec.ch.

iTeh STANDARD PREVIEW (standards.iteh.ai)

IEC 61287-1:2014

<https://standards.iteh.ai/catalog/standards/sist/e7926439-c114-4c02-a7e7-b4b4b9348777/iec-61287-1-2014>

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**RAILWAY APPLICATIONS –
POWER CONVERTERS INSTALLED
ON BOARD ROLLING STOCK –****Part 1: Characteristics and test methods****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61287-1 has been prepared by IEC technical committee 9: Electrical equipment and systems for railways.

This third edition cancels and replaces the second edition published in 2005. This edition constitutes a technical revision.

This edition includes the following main technical changes with regard to the previous edition: it includes updates as necessary in order to meet the current technical state of the art and to improve clarity. It also takes into account generic railway standards as relevant parts of IEC 62497 and IEC 62498. Especially the clauses considering temperature rise test and auxiliary converter characteristics have been revised.

The text of this standard is based on the following documents:

FDIS	Report on voting
9/1918/FDIS	9/1946/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of IEC series 61287, under the general title *Railway applications – Power converters installed on board rolling stock*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

iTeh STANDARD PREVIEW

IEC 61287-1:2014

<https://standards.iteh.ai/catalog/standards/sist/e7926439-c114-4c02-a7e7-b4b4b9348777/iec-61287-1-2014>

RAILWAY APPLICATIONS – POWER CONVERTERS INSTALLED ON BOARD ROLLING STOCK –

Part 1: Characteristics and test methods

1 Scope

This part of IEC 61287 defines terminology, service conditions, general characteristics and test methods of electronic power converters onboard of rolling stock.

This International Standard is applicable to power electronic converters mounted on board railway rolling-stock and intended for supplying

- traction circuits;
- auxiliary circuits of power vehicles, coaches and trailers.

The application of this standard extends as far as possible to all other traction vehicles, including trolley-buses, for example.

This standard covers the complete converter assembly together with its mounting arrangements containing

- semiconductor device assemblies;
- integrated cooling systems;
- integrated components like inductors, capacitors, transformers, resistors, contactors, switches;
- semiconductor drive units (SDU) and related sensors;
- incorporated protection circuits.

The following types of power sources are taken into consideration:

- AC contact lines,
- DC contact lines,
- on-board supplies such as generators, batteries and other electric power sources.

This standard excludes converters which provide the electronic control supply for semiconductor drive units (SDU) and other supplies relevant to the converter operation such as sensors.

NOTE 1 Electronic control equipment of converters and those sensors not related to semiconductor drive units and the printed circuit board assemblies of semiconductor drive units (SDU) are covered by IEC 60571.

NOTE 2 Combined tests with the whole traction system or auxiliary supply system are not within the scope of this standard. E.g. rules for combined tests of a motor fed by a converter are given in the IEC 61377 series.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050-551:1998, *International Electrotechnical Vocabulary (IEV) – Part 551: Power electronics*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60050-551:1998 and IEC 60050-811:1991, as well as the following, apply.

3.1 General

3.1.1

user

party which is responsible for the specification and the integration of the power converter into the railway vehicle

3.1.2

manufacturer

party which designs and manufactures the power converter

3.1.3

railway authority

organization which allows vehicle operators to operate railway vehicles and defines rules for safe operation

3.1.4

test specification

document that specifies the requirements for one or more tests

Note 1 to entry: For instance test acceptance criteria, test conditions, test methods.

Note 2 to entry: According to the specific terminologies used in the quality management systems of various organisations that perform tests on power converters for rolling stock, this document may have another title e.g. test plan.

3.2 Terms and definitions related to equipment

3.2.1

(electronic) (power) converter

an operative unit for electronic power conversion, comprising one or more electronic valve devices, transformers and filters if necessary and auxiliaries if any

Note 1 to entry: A converter is defined by the input and output electrical characteristics. The converter may comprise a discrete chopper, inverter, etc. or a combination of these not necessarily in one cubicle.

Note 2 to entry: The converter is a part of the propulsion (or auxiliary) equipment. The converter may include, for example, a line circuit breaker, filter, transformer, cooling system, etc.

[SOURCE: IEC 60050-551:1998, 551-12-01]

3.2.2

traction converter

converter providing traction power

3.2.3

auxiliary converter

converter providing power for auxiliary services

Note 1 to entry: For example, lighting, battery charging, air conditioning, cooling (main service), control circuits, etc.

3.2.4

direct converter

an electronic converter without an intermediate link

3.2.5

indirect converter

an electronic converter with an intermediate link

3.2.6

converter system

system consisting of several converters required to operate connected together, each having different input and/or output characteristics and which also have different functional connections

Note 1 to entry: A converter system is defined by a system specification in addition to the individual specification of each different converter making up the system.

3.2.7

converter windings

windings of a transformer connected to the terminals of the converter

3.2.8

auxiliary winding

a winding or part of a transformer winding which supplies the auxiliary circuits

[SOURCE: IEC 60050-811:1991, 811-26-12]

3.2.9

semiconductor device

device whose essential characteristics are due to the flow of charge carriers within a semiconductor

Note 1 to entry: The definition includes devices whose essential characteristics are only in part due to the flow of charge carriers in a semiconductor but that are considered as semiconductor devices for the purpose of specification.

[SOURCE: IEC 60050-521:2002, 521-04-01]

3.2.10

input and output

input is the side which absorbs active power in motoring operation, the output side being that which delivers active power in motoring operation

Note 1 to entry: Electrical isolation. If individual electrical circuits (for example, input, output, control circuit) are specified as isolated, then the circuits are galvanically separated.

3.3 Terms and definitions related to electrical parameters

3.3.1

load profile

curve to illustrate the variance of current/power versus time under specified conditions such as

- for traction converter: starting and braking of the vehicle;
 - for auxiliary converter: starting and steady state running periods of the auxiliary loads;
- the line voltage is also considered

3.3.2

maximum instantaneous current

maximum specified current which the converter can commute for a specified voltage

3.3.3

transient

pertaining to, or designating, a phenomenon or quantity which varies between two consecutive steady states during a time interval short compared with the time-scale of interest

[SOURCE: IEC 60050-702:1992, 702-07-78]

3.3.4

harmonic component

sinusoidal component of a periodic quantity having a harmonic frequency

[SOURCE: IEC 60050-551:1998, 551-20-07]

3.3.5

DC ripple factor

the ratio of half the difference between the maximum and minimum value of a pulsating direct current to the mean value of this current

Note 1 to entry: With low values of the DC ripple factor this quantity is approximately equal to the ratio of the difference to the sum of the maximum and the minimum value.

Note 2 to entry: $\text{DC ripple factor} = (I_{\max} - I_{\min}) / 2 \times I_{\text{mean}}$

[SOURCE: IEC 60050-551:1998, 551-17-29]

3.3.6

nominal value

value of a quantity used to designate and identify a component, device, equipment, or system

Note 1 to entry: The nominal value is generally a rounded value.

[SOURCE: IEC 60050-151:2001, 151-16-09]

3.3.7

rated value

value of a quantity used for specification purposes, established for a specified set of operating conditions of a component, device, equipment, or system

Note 1 to entry: Generally defined by the manufacturer.

[SOURCE: IEC 60050-151:2001, 151-16-08]

3.3.8**operating point value**

quantity value assigned, generally by the user, for a specified operating condition of a component, device or equipment

3.3.9**special value**

quantity value assigned, generally by the user, for expected fault conditions within the supply or the load of a converter

4 Common clauses**4.1 General****4.1.1 Design**

The design process shall be visible and audible.

If the user requires details of this process for tender evaluation, the user shall define this in the tender documents.

4.1.2 Marking**4.1.2.1 Nameplate**

The converter shall be provided with a nameplate which shall be readable during the useful life of the converter and on which at least the following is inscribed:

- manufacturer's mark;
- number of main drawing and revision number and/or type designation;
- serial number;
- year of manufacture;
- mass.

4.1.2.2 Main terminals

The marking of the main terminals shall comply with the specifications given in IEC 61148.

4.1.3 Technical documentation**4.1.3.1 Documentation supplied by the manufacturer**

Documentation about the use and maintenance of the converter shall be provided by the manufacturer and shall include the following:

- device description (including functional description and technical data);
- type and routine test specification (list of tests, test methods, limits, tolerances, test conditions, acceptance criteria);
- results of the specified tests (test certificate);
- commissioning instructions;
- operating instructions;
- maintenance instructions;
- repair instructions;
- description of special tools for maintenance and repair purposes, if any;

- training programme and supporting media, to be detailed by agreement between the manufacturer and the user;
- declaration of materials which are required to be treated as special waste, when they are removed from service (either alone or with the converter).

4.1.3.2 Documentation to be supplied by the user

The user shall, if necessary, furnish a specification, which is primarily intended to give details of the agreements listed in Annex B. It is only necessary to enter an item in the specification if it differs from the normal requirement in this standard. The specification may also contain:

- general technical description of the application;
- special service conditions;
- supply system characteristics;
- load profile and duty cycles;
- EMC requirements;
- cooling requirements;
- ambient conditions;
- safety measures including fire behaviour requirements;
- features of electrical and mechanical design;
- details of the available maintenance and repair facilities.

Requirements shall be clear and univocal.

For example, statements which are not quantified like “Equipment shall not interfere with signalling and telecommunication facilities.” are not acceptable.

4.1.4 Reliability, availability, maintainability and safety

4.1.4.1 Reliability

The user may require the manufacturer to predict the reliability figure or meet the user's reliability target. The method of calculation shall be agreed between the manufacturer and the user at the time of tendering.

The specification and verification of the reliability requirements shall be in accordance with IEC 62278.

4.1.4.2 Availability

The user may require the manufacturer to predict the availability figure or meet the user's availability target. The method of calculation shall be agreed between the manufacturer and the user at the time of tendering.

The specification and the method of calculation and verification shall be in accordance with IEC 62278.

4.1.4.3 Maintainability

Maintenance requirements shall be defined by the user at the time of tendering. In addition, the equipment manufacturer shall define what maintenance procedures are necessary or prohibited. The maintenance procedure shall be agreed between the manufacturer and the user.

The specification and verification of these requirements shall be in accordance with IEC 62278.
