### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [csc@iec.ch](mailto:csc@iec.ch).

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Catalogue IEC - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

#### Recherche de publications IEC - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Glossaire IEC - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [csc@iec.ch](mailto:csc@iec.ch).

## CONTENTS

FOREWORD.....	7
INTRODUCTION.....	9
1 Scope.....	12
2 Normative references .....	13
3 Terms, definitions and abbreviations .....	13
Annex A (informative) Risk and safety integrity – general guidance.....	14
A.1 General.....	14
A.2 Necessary risk reduction .....	14
A.3 Role of safety instrumented systems.....	14
A.4 Risk and safety integrity .....	16
A.5 Allocation of safety requirements.....	17
A.6 Hazardous event, hazardous situation and harmful event.....	17
A.7 Safety integrity levels .....	18
A.8 Selection of the method for determining the required safety integrity level .....	18
Annex B (informative) Semi-quantitative method – event tree analysis .....	20
B.1 Overview .....	20
B.2 Compliance with IEC 61511-1:2016.....	20
B.3 Example .....	20
B.3.1 General .....	20
B.3.2 Process safety target .....	21
B.3.3 Hazard analysis .....	21
B.3.4 Semi-quantitative risk analysis technique.....	22
B.3.5 Risk analysis of existing process.....	23
B.3.6 Events that do not meet the process safety target.....	25
B.3.7 Risk reduction using other protection layers.....	26
B.3.8 Risk reduction using a safety instrumented function .....	26
Annex C (informative) The safety layer matrix method .....	28
C.1 Overview .....	28
C.2 Process safety target .....	29
C.3 Hazard analysis .....	29
C.4 Risk analysis technique.....	30
C.5 Safety layer matrix .....	31
C.6 General procedure .....	32
Annex D (informative) A semi-qualitative method: calibrated risk graph.....	34
D.1 Overview .....	34
D.2 Risk graph synthesis .....	34
D.3 Calibration .....	35
D.4 Membership and organization of the team undertaking the SIL assessment.....	36
D.5 Documentation of results of SIL determination .....	37
D.6 Example calibration based on typical criteria.....	37
D.7 Using risk graphs where the consequences are environmental damage .....	40
D.8 Using risk graphs where the consequences are asset loss .....	41
D.9 Determining the integrity level of instrument protection function where the consequences of failure involve more than one type of loss.....	41
Annex E (informative) A qualitative method: risk graph .....	42

E.1	General.....	42
E.2	Typical implementation of instrumented functions .....	42
E.3	Risk graph synthesis .....	43
E.4	Risk graph implementation: personnel protection .....	43
E.5	Relevant issues to be considered during application of risk graphs.....	45
Annex F (informative) Layer of protection analysis (LOPA) .....		47
F.1	Overview .....	47
F.2	Impact event .....	48
F.3	Severity level .....	48
F.4	Initiating cause.....	49
F.5	Initiation likelihood .....	50
F.6	Protection layers .....	50
F.7	Additional mitigation.....	51
F.8	Independent protection layers (IPL).....	51
F.9	Intermediate event likelihood .....	52
F.10	SIF integrity level .....	52
F.11	Mitigated event likelihood .....	52

F.13.10	Intermediate event likelihood .....	54
F.13.11	SIS .....	54
F.13.12	Next SIF .....	54
Annex G (informative) Layer of protection analysis using a risk matrix .....		56
G.1	Overview .....	56
G.2	Procedure.....	58
G.2.1	General .....	58
G.2.2	Step 1: General Information and node definition .....	58
G.2.3	Step 2: Describe hazardous event .....	59
G.2.4	Step 3: Evaluate initiating event frequency .....	62
G.2.5	Step 4: Determine hazardous event consequence severity and risk reduction factor .....	63
G.2.6	Step 5: Identify independent protection layers and risk reduction factor .....	64
G.2.7	Step 6: Identify consequence mitigation systems and risk reduction factor .....	65
G.2.8	Step 7: Determine CMS risk gap.....	66
G.2.9	Step 8: Determine scenario risk gap .....	69
G.2.10	Step 9: Make recommendations when needed .....	69
Annex H (informative) A qualitative approach for risk estimation & safety integrity level (SIL) assignment .....		71
H.1	Overview .....	71

H.2	Risk estimation and SIL assignment .....	73
H.2.1	General .....	73
H.2.2	Hazard identification/indication .....	73
H.2.3	Risk estimation .....	73
H.2.4	Consequence parameter selection (C) (Table H.2) .....	74
H.2.5	Probability of occurrence of that harm .....	75
H.2.6	Estimating probability of harm .....	77
H.2.7	SIL assignment .....	77
Annex I	(informative) Designing & calibrating a risk graph .....	80
I.1	Overview .....	80
I.2	Steps involved in risk graph design and calibration .....	80
I.3	Risk graph development .....	80
I.4	The risk graph parameters .....	81
I.4.1	Choosing parameters .....	81
I.4.2	Number of parameters .....	81
I.4.3	Parameter value .....	81
I.4.4	Parameter definition .....	81
I.4.5	Risk graph .....	82
I.4.6	Tolerable event frequencies (Tef) for each consequence .....	82
I.4.7	Calibration .....	83
I.4.8	Completion of the risk graph .....	84
Annex J	(informative) Multiple safety systems .....	85
J.1	Overview .....	85
J.2	Notion of systemic dependencies .....	85
J.3	Semi-quantitative approaches .....	88
J.4	Boolean approaches .....	89
J.5	State-transition approach .....	92
Annex K	(informative) As low as reasonably practicable (ALARP) and tolerable risk concepts .....	96
K.1	General .....	96
K.2	ALARP model .....	96
K.2.1	Overview .....	96
K.2.2	Tolerable risk target .....	97

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**FUNCTIONAL SAFETY –  
SAFETY INSTRUMENTED SYSTEMS  
FOR THE PROCESS INDUSTRY SECTOR –****Part 3: Guidance for the determination  
of the required safety integrity levels**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61511-3: has been prepared by subcommittee 65A: System aspects, of IEC technical committee 65: Industrial-process measurement, control and automation.

This second edition cancels and replaces the first edition published in 2003. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition:

Additional H&RA example(s) and quantitative analysis consideration annexes are provided.

The text of this document is based on the following documents:

FDIS	Report on voting
65A/779/FDIS	65A786/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61511 series, published under the general title *Functional safety – Safety instrumented systems for the process industry sector*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## iTeh STANDARD PREVIEW

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

Safety instrumented systems (SIS) have been used for many years to perform safety instrumented functions (SIF) in the process industries. If instrumentation is to be effectively used for SIF, it is essential that this instrumentation achieves certain minimum standards and performance levels.

The IEC 61511 series addresses the application of SIS for the process industries. A process hazard and risk assessment is carried out to enable the specification for SIS to be derived. Other safety systems are only considered so that their contribution can be taken into account when considering the performance requirements for the SIS. The SIS includes all devices and subsystems necessary to carry out the SIF from sensor(s) to final element(s).

The IEC 61511 series has two concepts which are fundamental to its application; SIS safety life-cycle and safety integrity levels (SIL).

The IEC 61511 series addresses SIS which are based on the use of Electrical (E)/Electronic (E)/Programmable Electronic (PE) technology. Where other technologies are used for logic solvers, the basic principles of the IEC 61511 series should be applied. The IEC 61511 series also addresses the SIS sensors and final elements regardless of the technology used. The IEC 61511 series is process industry specific within the framework of IEC 61508:2010.

The IEC 61511 series sets out an approach for SIS safety life-cycle activities to achieve these minimum standards. This approach has been adopted in order that a rational and consistent technical policy is used.

In most situations, safety is best achieved by an inherently safe process design. If necessary, this may be combined with a protective system or systems to address any residual identified risk. Protective systems can rely on different technologies (chemical, mechanical, hydraulic, pneumatic, electrical, electronic, and programmable electronic). Any safety strategy should consider each individual SIS in the context of the other protective systems. To facilitate this approach, the IEC 61511 series covers:

- a hazard and risk assessment is carried out to identify the overall safety requirements;
- an allocation of the safety requirements to the SIS is carried out;
- works within a framework which is applicable to all instrumented means of achieving functional safety;
- details the use of certain activities, such as safety management, which may be applicable to all methods of achieving functional safety;
- addressing all SIS safety life-cycle phases from initial concept, design, implementation, operation and maintenance through to decommissioning;
- enabling existing or new country specific process industry standards to be harmonized with the IEC 61511 series.

The IEC 61511 series is intended to lead to a high level of consistency (for example, of underlying principles, terminology, information) within the process industries. This should have both safety and economic benefits.

In jurisdictions where the governing authorities (for example national, federal, state, province, county, city) have established process safety design, process safety management, or other regulations, these take precedence over the requirements defined in the IEC 61511-1.

The IEC 61511-3 deals with guidance in the area of determining the required SIL in hazards and risk assessment. The information herein is intended to provide a broad overview of the wide range of global methods used to implement hazards and risk assessment. The information provided is not of sufficient detail to implement any of these approaches.

Before proceeding, the concept and determination of SIL provided in IEC 61511-1:2016 should be reviewed. The informative annexes in the IEC 61511-3 address the following:

- Annex A provides information that is common to each of the hazard and risk assessment methods shown herein.
- Annex B provides an overview of a semi-quantitative method used to determine the required SIL.
- Annex C provides an overview of a safety matrix method to determine the required SIL.
- Annex D provides an overview of a method using a semi-qualitative risk graph approach to determine the required SIL.
- Annex E provides an overview of a method using a qualitative risk graph approach to determine the required SIL.
- Annex F provides an overview of a method using a layer of protection analysis (LOPA) approach to select the required SIL.
- Annex G provides a layer of protection analysis using a risk matrix.
- Annex H provides an overview of a qualitative approach for risk estimation & SIL assignment.
- Annex I provides an overview of the basic steps involved in designing and calibrating a risk graph.
- Annex J provides an overview of the impact of multiple safety systems on determining the required SIL.
- Annex K provides an overview of the concepts of tolerable risk and ALARP.

Figure 1 shows the overall framework for IEC 61511-1, IEC 61511-2 and IEC 61511-3 and indicates the role that the IEC 61511 series plays in the achievement of functional safety for SIS.

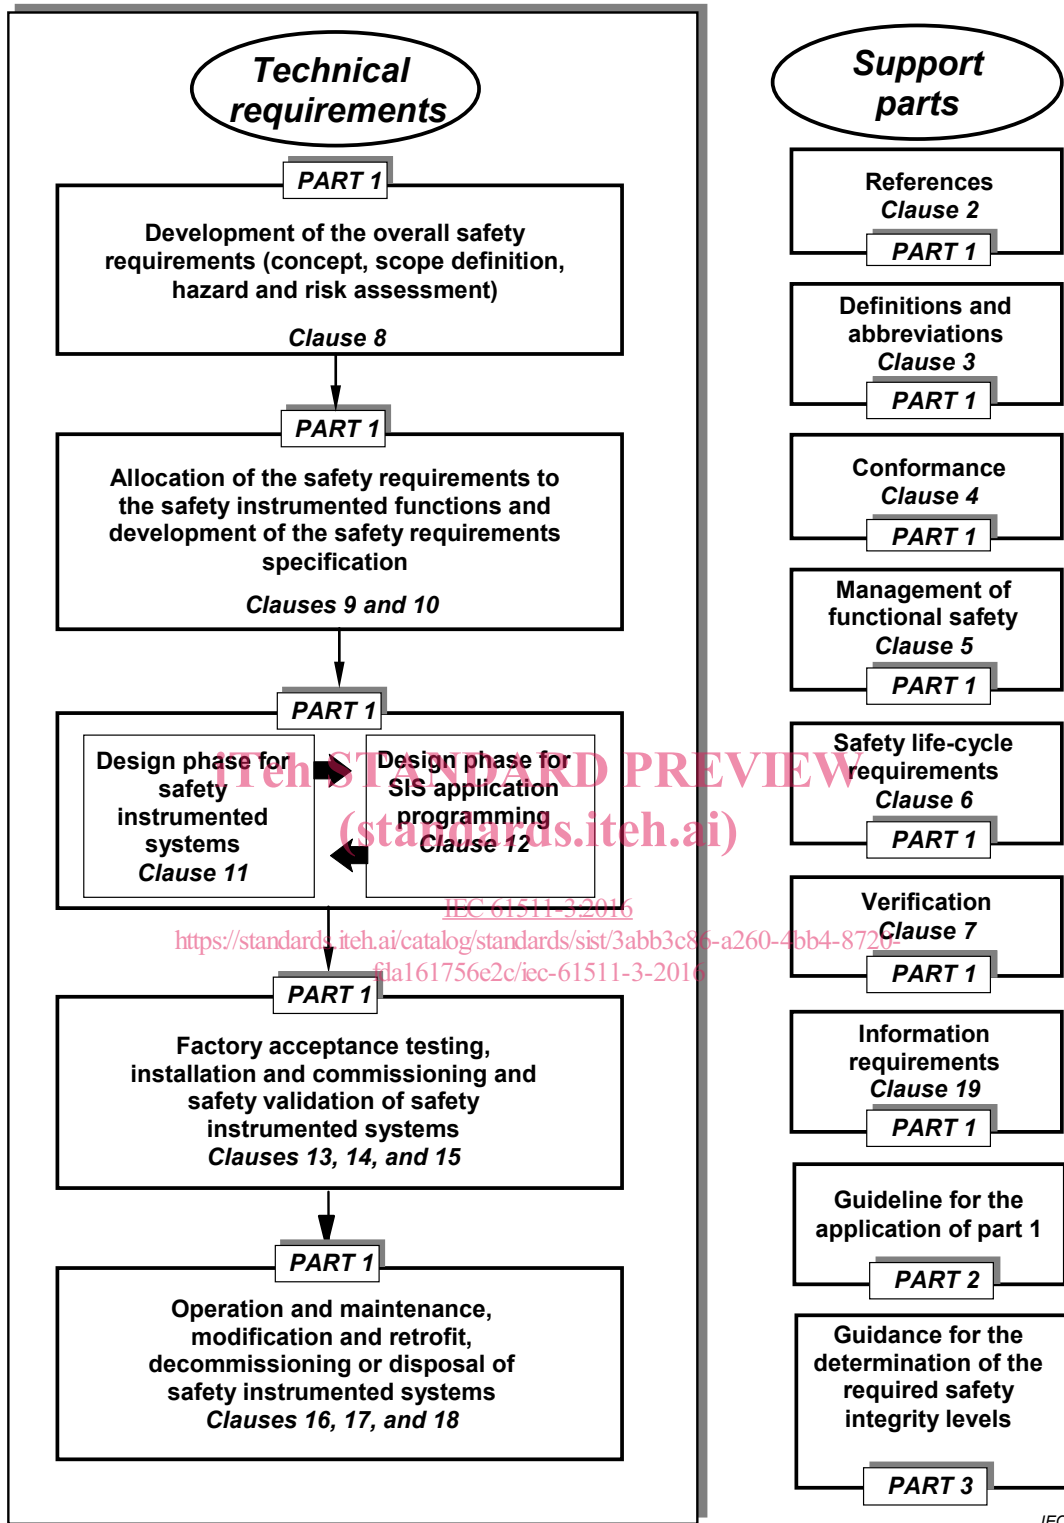

Figure 1 – Overall framework of the IEC 61511 series

# FUNCTIONAL SAFETY – SAFETY INSTRUMENTED SYSTEMS FOR THE PROCESS INDUSTRY SECTOR –

## Part 3: Guidance for the determination of the required safety integrity levels

### 1 Scope

This part of IEC 61511 provides information on:

- the underlying concepts of risk and the relationship of risk to safety integrity (see Clause A.4);
- the determination of tolerable risk (see Annex K);
- a number of different methods that enable the safety integrity level (SIL) for the safety instrumented functions (SIF) to be determined (see Annexes B through K);
- the impact of multiple safety systems on calculations determining the ability to achieve the desired risk reduction (see Annex J).

In particular, this part of IEC 61511:

- a) applies when functional safety is achieved using one or more SIF for the protection of either personnel, the general public, or the environment;
- b) may be applied in non-safety applications such as asset protection;
- c) illustrates typical hazard and risk assessment methods that may be carried out to define the safety functional requirements and SIL of each SIF;
- d) illustrates techniques/measures available for determining the required SIL;
- e) provides a framework for establishing SIL but does not specify the SIL required for specific applications;
- f) does not give examples of determining the requirements for other methods of risk reduction.

NOTE Examples given in the Annexes of this Standard are intended only as case specific examples of implementing IEC 61511 requirements in a specific instance, and the user should satisfy themselves that the chosen methods and techniques are appropriate to their situation.

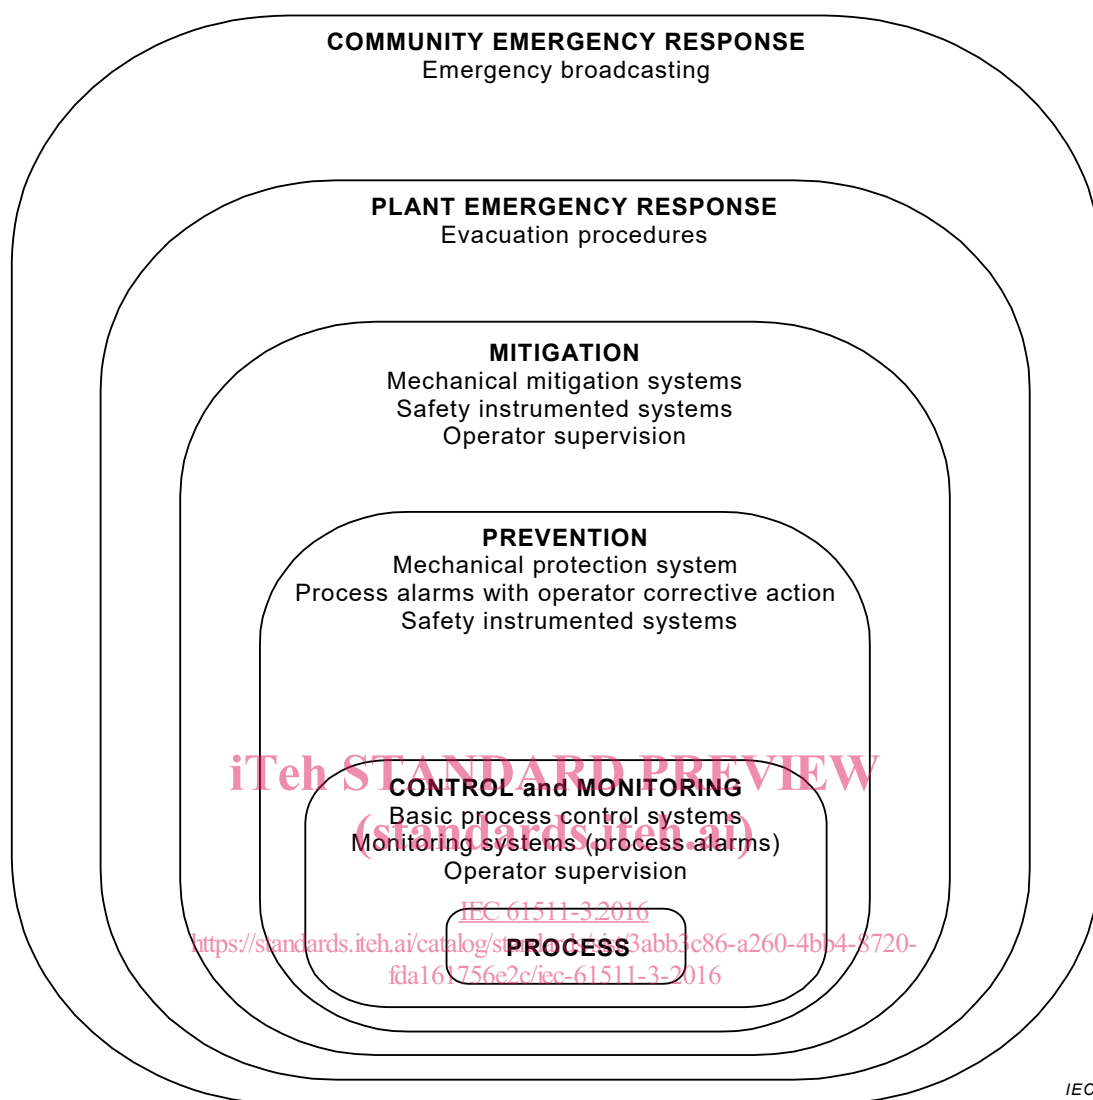

Annexes B through K illustrate quantitative and qualitative approaches and have been simplified in order to illustrate the underlying principles. These annexes have been included to illustrate the general principles of a number of methods but do not provide a definitive account.

NOTE 1 Those intending to apply the methods indicated in these annexes can consult the source material referenced in each annex.

NOTE 2 The methods of SIL determination included in Part 3 may not be suitable for all applications. In particular, specific techniques or additional factors that are not illustrated may be required for high demand or continuous mode of operation.

NOTE 3 The methods as illustrated herein may result in non-conservative results when they are used beyond their underlying limits and when factors such as common cause, fault tolerance, holistic considerations of the application, lack of experience with the method being used, independence of the protection layers, etc., are not properly considered. See Annex J.

Figure 2 gives an overview of typical protection layers and risk reduction means.

**Figure 2 – Typical protection layers and risk reduction means**

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61511-1:2016 *Functional safety – Safety instrumented systems for the process industry sector – Part 1: framework, definitions, system, hardware and application programming requirements*

## 3 Terms, definitions and abbreviations

For the purposes of this document the terms, definitions, and abbreviations given in IEC 61511-1:2016 apply.

The annexes in this Part 3 are informative and not normative. Also, the application of any particular method described in Part 3 annexes does not guarantee compliance with the requirements of IEC 61511-1:2016.
