About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 60 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

Plus de 60 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: csc@iec.ch.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COAXIAL COMMUNICATION CABLES –**Part 1-114: Electrical test methods –
Test for inductance**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user. (standards.iteh.ai)
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter. (<https://standards.iteh.ai/catalog/standards/sist/8117667d-2c60-4eab-93bb-0e5d3f512a66/iec-61196-1-114-2015>)
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61196-1-114 has been prepared by subcommittee 46A: Coaxial cables, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

The text of this standard is based on the following documents:

FDIS	Report on voting
46A/1265/FDIS	46A/1274/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

This standard is intended to be read in conjunction with IEC 61196-1. It is based on the second edition (2005) of that standard.

A list of all the parts in the IEC 61196 series published under the general title *Coaxial communication cables* can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

iTeh STANDARD PREVIEW **(standards.iteh.ai)**

[IEC 61196-1-114:2015](#)

<https://standards.iteh.ai/catalog/standards/sist/8117667d-2c60-4eab-93bb-0c5d3f51a1a6/iec-61196-1-114-2015>

COAXIAL COMMUNICATION CABLES –

Part 1-114: Electrical test methods – Test for inductance

1 Scope

This part of IEC 61196 details the test methods to determine the inductance characteristics of coaxial cables used in analogue and digital communication systems.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61196-1, *Coaxial communication cables – Part 1: Generic specification – General, definitions and requirements*

IEC 61196-1-101, *Coaxial communication cables – Part 1-101: Electrical test methods – Test for conductor d.c. resistance of cable*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 61196-1 as well as the following apply.

3.1 inductance

effective inductance (L) of the cable as the sum of the inductances of the inner conductor, the outer conductor and the mutual inductance between the two conductors

Note 1 to entry: At any (low) frequency, the impedance of a cable can be represented by two components – resistance (R) and reactance (X) – or as a polar function having magnitude (Z) and phase (θ). The impedance shall be represented by a series circuit:

$$R = Z \cdot \cos(\theta)$$

and

$$X = Z \cdot \sin(\theta)$$

where

$$Z = \sqrt{R^2 + X^2};$$

$$\tan(\theta) = X/R;$$

$$X = 2\pi \cdot f \cdot L.$$

Note 2 to entry: Inductances normally are measured at low frequencies (f) (50 Hz, 800 Hz or 1 000 Hz) as required in the relevant cable specification. For this case, the DC resistance (R) shall be measured as described in IEC 61196-1-101. R is the DC-resistance of the inner and outer conductor (= loop resistance).

4 Procedure

4.1 Equipment

The measurements can be performed using an impedance analyser (or alternatively a discrete signal generator and receiver), an LCR-meter or an impedance-measuring-bridge (Wheatstone-, Maxwell-Bridge).

Accuracy of measuring equipment should be less than or equal to 2 %.

4.2 Test sample

The test sample shall be straightened and have a length of 10 m up to 100 m. The test may be performed at a delivery length, if the attenuation of the cable is small enough, but less than 1/20 of the wave length of the test signal for measurement with higher frequencies.

4.3 Calibration

The influence of the connecting cables, used for connection of the CUT to the equipment, shall be measured at the relevant frequency.

The calibration of the test set-up with the impedance analyser shall be done under open, short and load conditions. The measurements shall be done over the whole specified frequency range. The calibration data shall be saved, so that the results may be corrected.

4.4 Test set-up

The input impedance Z of the CUT shall be measured with the impedance analyser with a short circuit at the far end of the end of the CUT.

<https://standards.iteh.ai/catalog/standards/sist/8117667d-2c60-4eab-93bb-0c5d3f51a1a6/iec-61196-1-114-2015>

4.5 Measuring procedure

The test sample shall be connected to the terminals of the measuring devices and the impedance Z shall be measured with a short circuit at the far end of the CUT.

Impedance analysers or LCR-meters will show the value of inductance directly. In other cases, the equation given in 3.1 can be used to calculate the inductance with other instrumentation.

5 Expression of test results

The test results shall be normalized to the reference length of 1 km.

$$L = (L_m / \text{Length}) \times 1\,000 \text{ (mH/km)}$$

where

L is the inductance of reference length;

L_m is the measured inductance in millihenrys;

Length is the length of sample in metres.

6 Test report

The test report shall give the test conditions:

- temperature,
- test frequency,
- sample length,
- normalized values for the reference length.
- type equipment used

and record the corrected values for the reference length.
