About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 14 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 55 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 14 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

Plus de 55 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: csc@iec.ch.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

ELECTRICAL INSTALLATIONS IN SHIPS –**Part 354: Single- and three-core power cables
with extruded solid insulation for rated voltages 6 kV
($U_m = 7,2 \text{ kV}$) up to 30 kV ($U_m = 36 \text{ kV}$)****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60092-354 has been prepared by subcommittee 18A: Electric cables for ships and mobile and fixed offshore units, of IEC technical committee 18: Electrical installations of ships and of mobile and fixed offshore units.

This third edition cancels and replaces the second edition published in 2003. This edition constitutes a technical revision with respect to the previous edition.

This edition includes the following significant technical changes with respect to the previous edition:

- a) Modification of construction requirements in line with IEC 60092-350. There has been some redistribution of test methods between IEC 60092-350 and this new standard to remove all tests carried out on complete cables.

- b) Requirements for enhanced cold properties, oil resistance and resistance to drilling fluids have been aligned to IEC 60092-350.

The text of this standard is based on the following documents:

FDIS	Report on voting
18A/377/FDIS	18A/380/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The list of all the parts of the IEC 60092 series, under the general title *Electrical installations in ships*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

ELECTRICAL INSTALLATIONS IN SHIPS –

Part 354: Single- and three-core power cables with extruded solid insulation for rated voltages 6 kV ($U_m = 7,2 \text{ kV}$) up to 30 kV ($U_m = 36 \text{ kV}$)

1 Scope

This part of IEC 60092 is applicable to shipboard and offshore power cables with extruded solid insulation, conductor and core screening, having a voltage rating of one of the following: 3,6/6 (7,2) kV, 6/10 (12) kV, 8,7/15 (17,5) kV, 12/20 (24) kV, 18/30 (36) kV.

NOTE 1 Subclause 4.1 gives more details.

The cables are intended for fixed installations.

The various types of power cables are given in 5.1. The constructional requirements and test methods are aligned with those indicated in IEC 60092-350, unless otherwise specified in this standard.

The object of this standard is:

- to standardize cables whose safety and reliability are ensured when they are installed in accordance with the requirements of IEC 60092-352 or IEC 61892-4;
- to lay down standard manufacturing requirements and characteristics of such cables directly or indirectly bearing on safety;
- to specify test methods for checking conformity with those requirements.

NOTE 2 Only radial lead cables are covered.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60038, *IEC standard voltages*

IEC 60754-2, *Test on gases evolved during combustion of materials from cables – Part 2: Determination of acidity (by pH measurement) and conductivity*

IEC 60885-2, *Electrical test methods for electric cables – Part 2: Partial discharge tests*

IEC 61034-1, *Measurement of smoke density of cables burning under defined conditions – Part 1: Test apparatus*

IEC 61034-2, *Measurement of smoke density of cables burning under defined conditions – Part 2: Test procedure and requirements*

3 Terms and definitions

For the purpose of this document, the terms and definitions given in IEC 60092-350 apply.

4 General requirements

4.1 Rated voltage

The standard method of designating the rated voltages of cables covered by this standard shall take the form

$$U_0/U (U_m)$$

where

U_0 is the rated power-frequency voltage between phase conductor and earth or metallic screen, for which the cable is designed;

U is the rated power-frequency voltage between phase conductors for which the cable is designed;

U_m is the maximum value of the highest system voltage for which the equipment (including cable) may be used (see IEC 60038).

All voltages are given as r.m.s. values.

The standard rated voltages $U_0/U (U_m)$ of the cables considered in this standard are: 3,6/6 (7,2) kV, 6/10 (12) kV, 8,7/15 (17,5) kV, 12/20 (24) kV, and 18/30 (36) kV.

4.2 Markings

4.2.1 Indication of origin and voltage identification

Cables shall comply with 4.1.3 of IEC 60092-350:2014 with respect to:

- indication of origin;
- rated voltage and cable construction (number of cores and cross-sectional area of the construction);

- c) continuity of marking;
- d) durability/legibility.

4.2.2 Continuity of marking

The marking is deemed to be continuous if the distance between the end of any marking and the beginning of the next does not exceed:

- a) 550 mm if the marking is on the outer surface of the cable;
- b) 275 mm in all other cases.

4.2.3 Core identification for three-cores

Cores of cables shall be provided with a suitable method of identification. Each core shall be easily distinguishable from the other cores in the cable.

5 Constructional requirements

5.1 General cable description

5.1.1 Overview

Shipboard and offshore cables for fixed installations shall be single or multi-core cables generally constructed as follows.

5.1.2 Armoured single-sheathed cable with outer sheath only

The armoured single-sheathed cables having only an outer sheath are constructed as follows:

- copper conductor, see 5.2;
- conductor semi-conducting screen, see 5.4.2;
- insulation, see 5.3;
- insulation screening, see 5.4.3;
- cabling (for three-core cables), see 5.6;
- inner covering, see 5.7;
- braid armour, see 5.9;
- outer sheath applied as either one or two layer systems, see 5.10.

5.1.3 Armoured double-sheathed cable with inner and outer sheath

The armoured double-sheathed cables having both an inner and an outer sheath are constructed as follows:

- copper conductor, see 5.2;
- conductor semi-conducting screen, see 5.4.2;
- insulation, see 5.3;
- insulation screening, see 5.4.3;
- cabling (for three-core cables), see 5.6;
- inner sheath, see 5.8;
- braid armour, see 5.9;
- outer sheath applied as either one or two layer systems, see 5.10.

The use of a thermoplastic inner sheath (ST 2 or SHF 1) is not recommended if the outer sheath consists of an elastomeric cross-linked material.

5.1.4 Armoured single-sheathed cable with inner sheath only

The armoured single-sheathed cables having only an inner sheath are constructed as follows:

- copper conductor, see 5.2;
- conductor semi-conducting screen, see 5.4.2;
- insulation, see 5.3;
- insulation screening, see 5.4.3;
- inner sheath, see 5.8;
- braid armour, see 5.9.

The cables for installation in spaces where corrosion can occur, for example weather decks, wet locations, battery compartments, refrigeration rooms, etc., should have an outer sheath over the braid, if any, unless the braid itself is corrosion-resistant.

5.1.5 Unarmoured single-sheathed cable

The unarmoured single-sheathed cables are constructed as follows:

- copper conductor, see 5.2;
- conductor semi-conducting screen, see 5.4.2;
- insulation, see 5.3;
- insulation screening, see 5.4.3;
- cabling (for three-core cables), see 5.6;
- inner covering (optional), see 5.7;
- outer sheath applied as either one or two layer systems, see 5.10.

5.2 Conductors

Material, metal coating, class and form of the conductors shall be in accordance with IEC 60092-350. The form of the conductor shall be round circular stranded, non-compacted or compacted, in accordance with Class 2 of IEC 60228. To aid installation a conductor of Class 5 may be used. Cables with such Class 5 conductors should not be regarded as suitable for repeated flexing in service.

The minimum cross-sectional area shall be 10 mm² for 3,6/6 (7,2) kV cables, 16 mm² for 6/10 (12) kV cables, 25 mm² for 8,7/15 (17,5) kV cables, 35 mm² for 12/20 (24) kV cables and 50 mm² for 18/30 (36)kV cables.

5.3 Insulation

5.3.1 Material

The insulation system shall be EPR, HEPR or XLPE compounds as defined in IEC 60092-360.

5.3.2 Application

The application shall be as detailed in 4.3.2 of IEC 60092-350:2014.
