About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 60 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Catalogue IEC - webstore.iec.ch/catalogue

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

Recherche de publications IEC - www.iec.ch/searchpub

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

Plus de 60 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Service Clients - webstore.iec.ch/csc

INTERNATIONAL ELECTROTECHNICAL COMMISSION

COAXIAL COMMUNICATION CABLES –

**Part 1-116: Electrical test methods –
Test for impedance with time domain reflectometry (TDR)**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The International Standard IEC 61196-1-116 has been prepared by subcommittee 46A: Coaxial cables, of IEC technical committee 46: Cables, wires, waveguides, R.F. connectors, R.F. and microwave passive components and accessories.

The text of this standard is based on the following documents:

FDIS	Report on voting
46A/1270/FDIS	46A/1283/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

This standard is intended to be read in conjunction with IEC 61196-1. It is based on the second edition (2005) of that standard.

A list of all parts of the IEC 61196 series, published under the general title: *Coaxial communication cables*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

COAXIAL COMMUNICATION CABLES –

Part 1-116: Electrical test methods – Test for impedance with time domain reflectometry (TDR)

1 Scope

This part of IEC 61196 applies to coaxial communications cables. It specifies test methods for determining the impedance of coaxial communications cables with time domain reflectometry (TDR).

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61196-1:2005, *Coaxial communication cables – Part 1: Generic specification – General, definitions and requirements*

IEC 62153-1-1, *Metallic communication cables test methods – Part 1-1: Electrical – Measurement of the pulse/step return loss in the frequency domain using the Inverse Discrete Fourier Transformation (IDFT)*

3 Terms and definitions

For the purpose of this document, the terms and definitions given in IEC 61196-1 apply.

4 Principles

When a step function signal is sent to cable under test and the signal pass through the test point of cable, part of the energy is reflected. The distance (L) from the input end to the test point can be calculated by measuring the total signal traveling time (t) as Figure 1. The change of impedance can be also calculated by measuring the amplitude of the input and reflected signal, as shown in Figure 1.

IEC

Figure 1 – Principle of TDR measurement

The distance L of the test point can be determined by:

$$L = \frac{v \times t}{2} = \frac{c \times t}{2 \times \sqrt{\epsilon_r}} \quad (1)$$

The impedance of the test point should be:

$$\rho = \frac{U_{re}}{U_{in}} \quad (2)$$

<https://standards.iteh.ai/catalog/standards/sist/387352fd-6c4b-457f-a96b-43841268e075/iec-61196-1-116-2015>

<https://standards.iteh.ai/catalog/standards/sist/387352fd-6c4b-457f-a96b-43841268e075/iec-61196-1-116-2015>

$$Z_L = Z_{i0} \times \frac{1 + \rho}{1 - \rho} \quad (3)$$

where

- L is the distance of the test point, in metres (m);
- v is the propagation velocity, in metres per second (m/s);
- t is the total signal traveling time as shown in Figure 1, in seconds (s);
- c is the propagation velocity in free space (3×10^8 m/s);
- ϵ_r is the dielectric constant of cable dielectric;
- ρ is reflection coefficient;
- U_{re} is the voltage of reflected signal, in volts (V);
- U_{in} is the voltage of input signal, in volts (V);
- Z_L is the impedance of the test point, in ohms (Ω);
- Z_{i0} is the impedance of the reference line, in ohms (Ω).

5 Test method

5.1 Equipment

Test instrument: A time domain reflectometer (TDR) using a step voltage with enough resolution and accuracy and rise time less than 100 ps, or a vector network analyzer (VNA) with time domain capability using a step function in accordance with IEC 62153-1-1.

Reference components: A precision air-line and a precision load with the same nominal impedance as the cable under test.

5.2 Test sample

The cable under test (CUT) shall be terminated with suitable connectors at each end, as shown in Figure 2.

Maximum L_{sample} shall be determined: 3 m or 2 dB at 3 GHz whichever is shorter.

Minimum L_{sample} is mainly dependent on the resolution of TDR system rise time, which shall be determined by:

$$L_{\text{sample}} \geq \frac{2 \times t_{\text{system}} \times c}{\sqrt{\epsilon_r}} \quad (4)$$

where

L_{sample} is the length of test sample shown in Figure 2, in metres (m);

t_{system} is the rise time of TDR system, in seconds (s);

c is the propagation velocity in free space (3×10^8 m/s);

ϵ_r is the dielectric constant of cable dielectric.

Figure 2 – Test sample

For higher precision, a pair of screw thread connectors suitable to interface of the TDR or VNA should be used.

5.3 Procedure

The procedure is as follows.

- a) After fully preheating test instrument, set the test mode to measure impedance of the test sample.
- b) The precision air-line shall be connected between the test instrument and the precision load, as shown in Figure 3. Set the test range of test instrument to regular impedance range of the precision air line, and record the average impedance Z_{air} .

IEC

Key

- 1 test lead
- 2 precision air line
- 3 precision load

Figure 3 – Z_{air} test set-up
(standards.iteh.ai)

For higher precision, test lead shall be as short as possible.

- c) Insert the test sample between the precision air-line and the precision load, as shown in Figure 4. Set test range of test instrument to measure within the confines of " L_{sample} " as shown in Figure 2. Then measure the impedance, " Z_{sample} ", and record the relevant data of impedance.

IEC

Key

- 1 test lead
- 2 precision air line
- 3 test sample
- 4 precision load

Figure 4 – Test set-up with test sample

d) The test sample shall then be turned end-to-end and the measurement repeated as 5.3 c).

5.4 Calculation of test data

5.4.1 Test instrument deviation calculation

The impedance deviation of test instrument is given by:

$$\delta = Z_0 - Z_{\text{air}} \quad (5)$$

where

- δ is the impedance deviation of test instrument, in ohms (Ω);
 Z_0 is the nominal impedance of precision air line, in ohms (Ω);
 Z_{air} is the measured average impedance of precision air line, in ohms (Ω).

5.4.2 Correction calculation

The impedance of the test sample is given by:

$$Z = Z_{\text{sample}} + \delta \quad (6)$$

where

- Z is the impedance of the test sample, in ohms (Ω);
 Z_{sample} is the actual measured impedance of the test sample, in ohms (Ω);
 δ is the impedance deviation of test instrument, in ohms (Ω).

6 Test report

The test report shall include:

- the test sample length L_{sample} , in metres (m);
- ambient temperature, in degree Celsius ($^{\circ}\text{C}$);
- parameters set in the VNA (when applicable);
- the tolerance of the precision load and air line;
- the impedance of the test sample, in ohms (Ω).

7 Requirement

The results at both ends of the test sample shall not exceed the value specified in the detailed specification.
