### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

More than 60 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [csc@iec.ch](mailto:csc@iec.ch).

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Catalogue IEC - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

#### Recherche de publications IEC - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Glossaire IEC - [std.iec.ch/glossary](http://std.iec.ch/glossary)

Plus de 60 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [csc@iec.ch](mailto:csc@iec.ch).

## CONTENTS

FOREWORD .....	10
INTRODUCTION .....	12
0.1 General .....	12
0.2 Patent declaration .....	15
1 Scope .....	17
2 Normative references .....	17
3 Terms, definitions and abbreviated terms .....	17
3.1 Terms and definitions .....	17
3.2 Abbreviated terms .....	25
4 Overview .....	25
4.1 General .....	25
4.2 Control modes .....	26
4.2.1 General .....	26
4.2.2 Control methods .....	26
4.2.3 Control nomenclature .....	27
4.2.4 Position control .....	27
4.2.5 Velocity control .....	28
4.2.6 Acceleration control .....	30
4.2.7 Torque control .....	30
4.2.8 No Control .....	31
5 Data types .....	32
5.1 Data type overview .....	32
5.2 Conventions .....	32
6 CIP Motion drive profile .....	32
6.1 Object model .....	32
6.1.1 Object overview .....	32
6.1.2 Object description .....	33
6.2 How objects affect behavior .....	34
6.3 Defining object interfaces .....	34
6.4 I/O connection messages .....	35
6.4.1 General .....	35
6.4.2 CIP Motion I/O Connection .....	35
6.4.3 Controller-to-Device Connection .....	39
6.4.4 Device-to-Controller Connection .....	59
6.4.5 Fixed Motion I/O connection format .....	68
6.4.6 CIP Motion I/O Connection timing model .....	69
6.5 Device startup procedure .....	85
6.5.1 General .....	85
6.5.2 Motion I/O Connection creation .....	85
6.5.3 Motion Device Axis Object configuration .....	88
6.5.4 Time Synchronization .....	90
6.6 Device visualisation .....	92
6.7 Ethernet/IP Quality of Service (QoS) .....	93
7 Motion Device Axis Object .....	93
7.1 General considerations .....	93

7.1.1	General .....	93
7.1.2	Revision history .....	93
7.1.3	Object overview .....	93
7.1.4	Motion Device Axis Object abstraction .....	94
7.1.5	Motion Control Axis Object .....	95
7.1.6	Device control classification.....	95
7.1.7	Required vs. Optional in implementation.....	96
7.2	Class attributes.....	107
7.2.1	General .....	107
7.2.2	Semantics.....	111
7.3	Instance attributes .....	114
7.3.1	General .....	114
7.3.2	Motion Control configuration attributes .....	116
7.3.3	Motion Scaling attributes .....	117
7.3.4	Connection Data attributes .....	123
7.3.5	Motor attributes .....	129
7.3.6	Feedback attributes .....	140
7.3.7	Event Capture attributes.....	149
7.3.8	Command reference generation attributes .....	155
7.3.9	Control mode attributes .....	158
7.3.10	Stopping & Braking attributes.....	176
7.3.11	DC Bus Control attributes.....	186
7.3.12	Power and thermal management attributes.....	190
7.3.13	Axis Status attributes.....	193
7.3.14	Exception, fault, and alarm attributes.....	199
7.3.15	Fault and alarm Log attributes.....	205
7.3.16	Exception limit attributes.....	210
7.3.17	Axis exception action configuration attribute .....	213
7.3.18	Initialization fault attributes.....	215
7.3.19	Start inhibit attributes .....	216
7.3.20	APR fault attributes .....	217
7.3.21	Axis statistical attributes.....	219
7.3.22	Axis info attributes.....	219
7.3.23	General purpose I/O attributes.....	220
7.3.24	Local Mode attributes .....	222
7.3.25	Axis Safety attributes.....	222
7.4	Common services .....	223
7.4.1	Supported services .....	223
7.4.2	Service specific data.....	224
7.5	Object specific services .....	226
7.5.1	Supported services .....	226
7.5.2	Service specific data.....	226
7.6	Behavior .....	241
7.6.1	State model .....	241
7.6.2	State behavior .....	252
7.6.3	Fault and alarm behavior .....	259
7.6.4	Start Inhibit behavior .....	261
7.6.5	Visualization behavior.....	261
7.6.6	Command generation behavior .....	266

7.6.7	Feedback interface behavior.....	271
7.6.8	Event Capture Behavior.....	273
7.6.9	Control Mode behavior.....	274

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ADJUSTABLE SPEED ELECTRICAL  
POWER DRIVE SYSTEMS –****Part 7-202: Generic interface and use of profiles for  
power drive systems – Profile type 2 specification**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

International Standard IEC 61800-7-202 has been prepared by subcommittee SC 22G: Adjustable speed electric drive systems incorporating semiconductor power converters, of IEC technical committee TC 22: Power electronic systems and equipment.

This second edition cancels and replaces the first edition published in 2007. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) update of patent information;
- b) new revision of the Drive Profile and Drive Axis specifications, with multiple clarifications and enhancements.

The text of this standard is based on the following documents:

FDIS	Report on voting
22G/308/FDIS	22G/323/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61800 series, under the general title *Adjustable speed electrical power drive systems*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

## INTRODUCTION

### 0.1 General

The IEC 61800 series is intended to provide a common set of specifications for adjustable speed electrical power drive systems.

IEC 61800-7 specifies profiles for Power Drive Systems (PDS) and their mapping to existing communication systems by use of a generic interface model.

IEC 61800-7 describes a generic interface between control systems and power drive systems. This interface can be embedded in the control system. The control system itself can also be located in the drive (sometimes known as "smart drive" or "intelligent drive").

A variety of physical interfaces is available (analogue and digital inputs and outputs, serial and parallel interfaces, fieldbuses and networks). Profiles based on specific physical interfaces are already defined for some application areas (e.g. motion control) and some device classes (e.g. standard drives, positioner). The implementations of the associated drivers and application programmers interfaces are proprietary and vary widely.

IEC 61800-7 defines a set of common drive control functions, parameters, and state machines or description of sequences of operation to be mapped to the drive profiles.

IEC 61800-7 provides a way to access functions and data of a drive that is independent of the used drive profile and communication interface. The objective is a common drive model with generic functions and objects suitable to be mapped on different communication interfaces. This makes it possible to provide common implementations of motion control (or velocity control or drive control applications) in controllers without any specific knowledge of the drive implementation.

There are several reasons to define a generic interface:

#### **For a drive device manufacturer**

- less effort to support system integrators;
- less effort to describe drive functions because of common terminology;
- the selection of drives does not depend on availability of specific support.

#### **For a control device manufacturer**

- no influence of bus technology;
- easy device integration;
- independent of a drive supplier.

#### **For a system integrator**

- less integration effort for devices;
- only one understandable way of modeling;
- independent of bus technology.

Much effort is needed to design a motion control application with several different drives and a specific control system. The tasks to implement the system software and to understand the functional description of the individual components may exhaust the project resources. In some cases, the drives do not share the same physical interface. Some control devices just support a single interface which will not be supported by a specific drive. On the other hand, the functions and data structures are often specified with incompatibilities. This requires the

system integrator to write special interfaces for the application software and this should not be his responsibility.

Some applications need device exchangeability or integration of new devices in an existing configuration. They are faced with different incompatible solutions. The efforts to adapt a solution to a drive profile and to manufacturer specific extensions may be unacceptable. This will reduce the degree of freedom to select a device best suited for this application to the selection of the unit which will be available for a specific physical interface and supported by the controller.

IEC 61800-7-1 is divided into a generic part and several annexes as shown in Figure 1. The drive profiles types for CiA® 402<sup>1</sup>, CIP Motion™<sup>2</sup>, PROFIdrive<sup>3</sup> and SERCOS®<sup>4</sup> are mapped to the generic interface in the corresponding annex. The annexes have been submitted by open international network or fieldbus organizations which are responsible for the content of the related annex and use of the related trademarks.

This part of IEC 61800-7 specifies the profile type 2 (CIP Motion™).

The profile types 1, 3 and 4 are specified in IEC 61800-7-201, IEC 61800-7-203 and IEC 61800-7-204.
