Foreword

This European Telecommunication Standard (ETS) has been produced by the Signalling Protocols and Switching (SPS) Technical Committee of the European Telecommunications Standards Institute (ETSI).

This ETS is part 3 of a multi-part standard covering the Signalling System No.7 Transaction Capabilities (TC) version 2 as described below:

- Part 1: "Protocol specification [ITU-T Recommendations Q.771 to Q.775 (1993), modified]";
- Part 2: "Protocol Implementation Conformance Statement (PICS) proforma specification";
- Part 3: "Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma specification".**

Transposition dates	
Date of adoption	6 December 1996
Date of latest announcement of this ETS (doa):	31 March 1997
Date of latest publication of new National Standard or endorsement of this ETS (dop/e):	30 September 1997
Date of withdrawal of any conflicting National Standard (dow):	30 September 1997

1 Scope

This third part of ETS 300 287 specifies the Abstract Test Suite (ATS) and partial Protocol Implementation eXtra Information for Testing (PIXIT) proforma for the transaction sublayer, component sublayer and dialogue portion of the Transaction Capabilities (TC) for implementations conforming to ITU-T Recommendations Q.771 to Q.775 as modified by ETS 300 287-1 [1].

ISO/IEC 9646, parts 1 to 5 [5 to 9] are used as the basis for the test methodology.

2 Normative references

This ETS incorporates by dated and undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this ETS only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of this ETS, the following definitions apply:

Abstract Service Primitive (ASP): See ISO/IEC 9646-1 [5].

Abstract Test Suite (ATS): See ISO/IEC 9646-1 [5].

Implementation Under Test (IUT): See ISO/IEC 9646-1 [5].

Means Of Testing (MOT): See ISO/IEC 9646-1 [5].

Protocol Conformance Test Report (PCTR): See ISO/IEC 9646-1 [5].

Protocol Implementation Conformance Statement (PICS): See ISO/IEC 9646-1 [5].

PICS proforma: See ISO/IEC 9646-1 [5].

Protocol Implementation eXtra Information for Testing (PIXIT): See ISO/IEC 9646-1 [5].

PIXIT proforma: See ISO/IEC 9646-1 [5].

System Under Test (SUT): See ISO/IEC 9646-1 [5].

3.2 Abbreviations

PIXIT	Protocol Implementation eXtra Information for Testing
SCCP	Signalling Connection Control Part
SUT	System Under Test
TC	Transaction Capabilities
TTCN	Tree and Tabular Combined Notation

4 General aspects

The co-ordinated test method as described in ISO/IEC 9646-2 [6] is used. It is possible that the entire test suite is not applicable for all Implementations Under Test (IUTs). A test selection procedure needs to be performed to determine the applicability of a test to a particular IUT. Such selection shall be based on the Protocol Implementation Conformance Statement (PICS) and the Protocol Implementation eXtra Information for Testing (PIXIT). The Abstract Test Cases (ATCs) contained in this ETS are a comprehensive reflection of the base standards.

4.1 Test groups and subgroups

The test suite is structured following the rules defined in ISO/IEC 9646-2 [6].

4.2 Preamble

The preamble of each test case consists of the events required to bring the IUT to the appropriate initial state. There may be alternate sequences of test steps which can be performed to initialize the IUT. These test steps in the preamble for TC have been chosen carefully, considering the test methodology and the other test co-ordination procedures that are available.

4.3 Test body

The test body is the sequence of steps within a test case that is essential to achieve the test purpose, followed by the verification of the IUTs ending state. Verdicts are assigned to the possible outcomes of the test cases.

It is important to test the observable behaviour of the IUT, which includes state transitions and Protocol Data Unit (PDU) responses.

4.4 Postamble

ITEH STANDARD PREVIEW
(standards.iteh.ai)

At the END_MSG of the execution of a test body, the IUT may not be in an "idle state". A postamble is then required to bring the IUT from the ending state to an "idle state".

<https://standards.iteh.ai/catalog/standards/sist/45cac6d9-ca53-4cb6-a96c-3c6deaeed56f/sist-ets-300-287-3-2000>

4.5 PICS/PIXIT relationship to the ATS

There are instances when the test case flow depends on the answer to a PICS or PIXIT question. In such instances, a Boolean expression is added to the beginning of the test body. However, it should be noted that such conditional execution has no bearing on static conformance.
