EUROPEAN STANDARD NORME EUROPÉENNE EUROPÄISCHE NORM

DRAFT prEN 50191

June 2009

ICS Will supersede EN 50191:2000

English version

Erection and operation of electrical test equipment

Installation et exploitation des équipements électriques d'essais

Errichten und Betreiben elektrischer Prüfanlagen

This draft European Standard is submitted to CENELEC members for CENELEC enquiry. Deadline for CENELEC: 2009-11-06.

It has been drawn up by CLC/BTTF 128-2.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Warning: This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

Introduction

42

- 43 With reference to Clause 5 of this European Standard, prepared in the field of application of Article 137
- 44 of the EC Treaty, the user should be aware that standards have no formal legal relationship with
- Directives which may have been made under Article 137 of the Treaty. In addition, national legislation 45
- in the Member states may contain more stringent requirements than the minimum requirements of a 46
- 47 Directive based on Article 137 of the Treaty. Information on the relationship between the national legislation implementing Directives based on Article 137 of the Treaty and this European Standard may
- 48 49

be given in a national foreword of the national standard implementing this European Standard.

https://standards.iteh.ai/catalog/standards.

1 Scope

50

- 51 **1.1** This European Standard is applicable to the erection and operation of fixed and temporary electrical test installations.
- 53 **1.2** Compliance with this European Standard is not necessary, if contact with live parts presents no danger. This is the case when one of the following conditions is satisfied at live exposed points:
- the voltage at frequencies above 500 Hz does not exceed 25 V a.c. or 60 V d.c. and complies with the requirements for SELV or for PELV in accordance with HD 384.4.41;
- 57 b) in case of voltages at frequencies up to 500 Hz exceeding 25 V a.c. or 60 V d.c., the resultant current through a non-inductive resistance of $2 \text{ k}\Omega$ does not exceed 3 mA a.c. (r.m.s.) or 12 mA d.c:
- 60 c) at frequencies above 500 Hz the national determined current and voltage values shall be applied.
 61 If there are no national requirements determined reference values for permissible body currents
 62 and contact voltages can be taken from Table A.1;
- d) the discharge energy does not exceed 350 mJ.
- NOTE 1 Even though compliance with the requirements of this European Standard is not necessary, if one of the abovementioned conditions is satisfied, other potential risks e. g. risk of fire and explosion shall be considered and appropriate measures be taken.
- NOTE 2 Ref. 1.2 b) & 1.2 d): The values for the resultant current of 3 mA a.c. or 12 mA d.c. and the discharge energy of 350 mJ comply with the values for live working specified in EN 50110-1. These values also comply with the values specified in IEC/TS 60479-1.
- 70 **1.3** This European Standard does not apply to the power supply to the test installations. In this case, the standards of the HD 384 series (for nominal voltages up to 1 000 V) or HD 637 S1 (for nominal voltages exceeding 1 kV) are applicable to erection and EN 50110-1 is applicable to operation.
- 73 **1.4** Where no requirements are given in this European Standard, the standards of the HD 384 series (for nominal voltages up to 1 000 V) or HD 637 S1 (for nominal voltages exceeding 1 kV) apply to the erection of electrical test installations and EN 50110-1 applies to the operation of electrical test installations.

77 2 Normative references

- The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced
- document (including any amendments) applies.

105 3 Terms and definitions

- For the purposes of this document, the following terms and definitions apply.
- 107 **3.1**
- 108 electrical test installations
- 109 (referred to in the following as **test installations**)
- the entirety of all the test devices, test appliances and facilities combined for test purposes, by

https://standards.iteh.ai/catalog/standards/sist/94a77cc7-702a-4596-92bb-

- means of which electrical tests are performed on test objects.
- 112 Types of test installations:
- 113 test station;
- 114 test laboratory or experimental station;
- 115 temporary test installation
- 116 **3.2**
- 117 test station
- appropriately identified test installation within a defined area. In test stations a distinction is made
- 119 between those with and those without automatic positive protection against direct contact

Superseded by EN 61140:2002, Protection against electric shock – Common aspects for installation and equipment (IEC 61140:2001).

⁵⁾ Superseded by HD 60364-4-41:2007, Low-voltage electrical installations – Part 4-41: Protection for safety – Protection against electric shock (IEC 60364-4-41:2005, mod.).

- 120
- 121 test station with automatic protection against direct contact
- test station in which the test object and all live parts of the test installation have automatically 122
- activated full protection against direct contact in an energized condition 123
- NOTE 1 At a test station with automatic protection against direct contact, there is generally only one person employed, e. g. in
- 124 125 the line of series production or in electric workshops, repair and service shops.
- 126 NOTE 2 Automatic protection means that voltages can only occur when the safety devices are effective, e.g. when the cover
- 127 or door of the test station is closed.
- 128 3.2.2
- test station without automatic protection against direct contact 129
- test station in which parts of the test object or live parts of the test installation are not fully 130
- protected against direct contact during testing. This includes, for instance, test areas in electric 131
- workshops, laboratories, measurement and experimental areas 132
- 133 3.3
- 134 test laboratory
- 135 test installations with minimum one test station in a securely enclosed space or within an area
- separated from adjacent work areas, in which several persons are generally employed on test 136
- work on larger test objects remaining there for a longer period of time 137
- 138 3.4
- 139 experimental station
- 140 test installations with minimum one test station for performing experiments or tests within the
- 141 scope of research and development work. In general, no routine tests are performed in
- 142 experimental stations. A variety of test assemblies as well as different hazards shall therefore be
- 143 anticipated
- 144
- temporary test installation (STAIN CLAIR C 145
- 146 test installation with minimum one test station erected for a short time in order to perform tests on
- 147 individual test objects
- 148 3.6
- prohibition zone 149
- 150 volume around live parts which should not be breached if full protection against direct contact

/standards.iteh.ai/catalog/standards/sist/94a77cc7-702a-4596-92bb-

- 151 with these parts is not provided
- 3.7 152
- 153 test area
- 154 area around the test assembly which is separated from the surrounding area
- 155 3.8
- 156 signal lights
- lights which are clearly visible from outside the boundaries of the test area giving red or green 157
- 158 signals to indicate the operational status inside the test area
- 159
- 160 indicator lights
- 161 serve to indicate the switching status on the control panels. They are not an alternative to
- 162 required signal lights
- 163 3.10
- 164
- combination of the probability and the degree of the possible injury or damage to health of a 165
- 166 person exposed to a hazard or to hazards
- 167
- electrical hazard 168
- 169 source of possible injury or damage to health in presence of electrical energy from an electrical
- 170 installation

1	71	3.1	2

- 172 skilled person (electrically)
- 173 person with relevant education and experience to enable him or her to avoid dangers which
- 174 electricity can create
- 175 (IEV 826-18-01, mod.)
- 176 **3.13**
- 177 instructed person (electrically)
- 178 a person adequately advised by skilled persons to enable him or her to avoid dangers which
- 179 electricity can create
- 180 (IEV 826-18-02, mod.)
- 181 **3.14**
- 182 nominated person in control of a work activity
- that person who has been nominated to be the person with direct management responsibility for
- the work activity. parts of this responsibility may be delegated to others as required
- 185 3.15 Operational status
- 186 **3.15.1**
- 187 **out of operation**
- 188 status when
- a) all power supplies, signalling and control circuits are switched off and secured against unauthorized switching-on,
- b) all safety precautions necessary before entering the test area (for voltages exceeding 1 kV, e.g. earthing, short-circuiting) have been taken
- 193 **3.15.2**
- 194 ready for operation
- 195 status when
- 196 a) the power supplies for the switchgear signalling and control circuits of the test installations are switched on,
- 198 b) the green signal lights, where these are required in accordance with the provisions in Clause 4, are on.
- 200 c) all power supplies for the test voltage are switched off and secured against unintentional switching,
- 202 d) the safety precautions specified in 3.15.1 b) ("out of operation") are in force
- 203 3.15.3
- 204 ready to switch on
- 205 status when
- 206 a) all power supplies for the test voltage are switched off,
- 207 b) all entries to the test area are closed,
- 208 c) the red signal lights are switched on,
- 209 d) the safety precautions specified in 3.15.1 b) ("out of operation") are no longer in force.
- 210 **3.15.4**
- 211 in operation
- 212 status when
- 213 a) all entries to the test area are closed,
- 214 b) the red signal lights are switched on,
- 215 c) one or more power supplies for the test voltage are switched on
- NOTE In Clauses 4 and 5, the technical devices for setting up the operational status "ready for operation" and "ready to switch on" are only required for certain test installations with voltages exceeding 1 kV.

4 Erection of test installations

219 **4.1 General**

218

- 220 Test installations shall be performed and erected as a
- 221 test station,
- 222 test laboratory or experimental station,
- 223 temporary test installation.

224 4.1.1 Protection against electric shock

225 **4.1.1.1 Test assembly**

- 226 The test assembly shall be so arranged and designed that the protection against direct contact is
- 227 secured by insulation of live parts, covers, enclosures, obstacles or safe distances. A safe distance is
- 228 ensured, when the person carrying out the tests cannot reach the prohibition zone with parts of his /
- 229 her body or tools. Safety can also be satisfied by means of a two-hand control device or the use of two
- 230 safety test probes to apply the test voltage. Test leads with full protection against direct contact shall be
- used. Two-hand control devices shall comply with EN 574:1996, Type II or IIIB. Where several persons
- are involved in a test, a two-hand control device shall be provided for each person of the test personnel
- and which are so connected that all the two hand controls are required to be operated before the test
- supplies can be energised.
- 235 Safety test probes shall have the adequate insulation level for the applied test voltage. No clamping
- 236 devices shall be permitted for this purpose.
- 237 In case of measuring instruments and auxiliary appliances of protection Class I (HD 366, e.g. cathode
- 238 ray oscilloscope, sine wave generator), where the protective conductor is interrupted to facilitate
- 239 testing, e.g. because the enclosure has to be isolated from earth potential, the appliance shall be
- 240 supplied from an isolating transformer in accordance with EN 61558 series.
- 241 If a circuit and/or the enclosure of a measuring instrument or an auxiliary appliance designed for mains
- connection is connected to live parts of the test assembly which can carry voltage to earth, then the
- 243 internal insulation of the supplying isolating transformer shall be rated at least for this voltage.
- 244 An effective protective measure for fault protection (protection against indirect contact) shall be
- 245 provided.
- 246 The test object shall be isolated from earth. If this is technically not possible e. g. due to the weight of
- 247 the test object, than the test assembly shall be so designed and arranged in order to prevent the
- transfer of voltage to extraneous conductive parts.
- 249 Test table boards shall be made of insulating materials.

250 4.1.1.2 Prohibition zone

- 251 The boundary of the prohibition zone shall be determined in accordance with Table A.2 and is
- 252 dependent on the test voltage.
- 253 In case of voltages up to 1 000 V, the surface of the live part is considered to be the boundary of the
- 254 prohibition zone. In case of voltages exceeding 1 kV, reaching the prohibition zone is considered equal
- 255 to touching live parts.
