Foreword

This document (EN 50411-3-3:2011) has been prepared by CLC/TC 86BXA "Fibre optic interconnect, passive and connectorised components".

The following dates are fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2012-11-14
- latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 2014-11-14

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

1 Scope

1.1 Product definition

This European Standard contains the initial, start of life dimensional, optical, mechanical and environmental performance requirements, which a singlemode fusion splice protector need to meet in order for it to be categorised as an EN standard product.

Although in this document the product is qualified for EN 60793-2-50 type B1.1 and B1.3 singlemode fibres it may also be suitable for fusion splice protection of multimode fibre with 125 µm diameter glass cladding and other singlemode fibres with 125 µm diameter glass cladding at other wavelengths.

1.2 Interoperability

The installed fusion splice protector needs to fit into optical fibre splice cassettes or splice trays. This European Standard specifies the following physical interface dimensions:

- cross sectional profile with width, height or diameter(in millimetres);
- length (in millimetres).

1.3 Expected performance

In this European Standard, the performance of the fusion splice protector is given with selected fibres as specified in Annex A.

**iTeH STANDARD PREVIEW
(standards.iteh.ai)**

1.4 Operating environment

The tests selected combined with the severities and durations are representative of an outdoor enclosed environment defined as category U in EN 61753-1. To ensure that the product can be used in closures, boxes or street cabinet for categories C, A, G and S (as defined EN 61753-1) the specified lower temperature is extended to -40 °C and requirements for temporary flooding have been added.

1.5 Reliability

Whilst the anticipated service life expectancy of the product in this environment is at least 20 years, compliance with this specification does not guarantee the reliability of the product. This should be predicted using a recognised reliability assessment programme.

1.6 Quality assurance

Compliance with this specification does not guarantee the manufacturing consistency of the product. This should be maintained using a recognised quality assurance programme.

2 Normative references

3 Description

3.1 Fusion splice protector

3.1.1 General

A singlemode fibre fusion splice protector is a passive component, which provides mechanical and environmental protection to a single fibre or ribbon fibre fusion splice. The fused fibres are protected against ingress of dust or temporary flooding by a sealing material, generally a polymer material like hot melt adhesive or mastic.

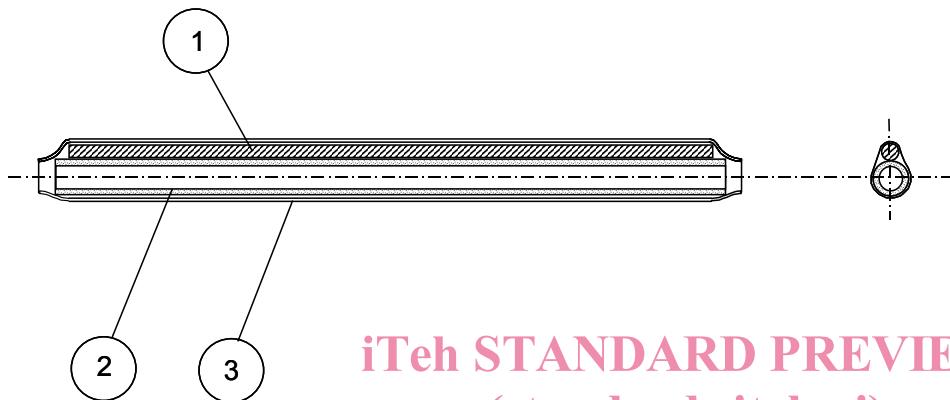

The products described in this standard are based on various protection types:

- heat shrinkable splice protector;
 - fold over splice protector (also called clam shell splice protector).

3.1.2 Heat shrinkable splice protector type

Prior to the splicing, the splice protector is put over one of the fibre or ribbon ends. After the fusion of the fibres, the splice protector is placed over the spliced area. After visual centring over the fused area the splice protector is shrunk by heating equipment.

The typical fusion splice protector is composed of three elements:

iTeh STANDARD PREVIEW

(standards.iteh.ai)

Key

SIST EN 50411-3-3:2012

- 1 a reinforcement member to give rigidity after the protector is installed in the heater;
2 an adhesive tube that will encapsulate the spliced region and bonds directly to the bare glass and primary or secondary coating of the fibres;
3 a cross-linked polyethylene heat-shrinkable tube, which encloses the adhesive insert tube and the reinforcement member.

Figure 1 — Heat shrinkable splice protector

3.1.3 Fold over or clam shell splice protector type

The fused area of the optical fibre is centred and kept in place by the adhesive strips and then the splice protector is fold over and closed by the use of a crimping tool. In general the following elements are available:

- rigid flat strip hinged in the centre;
 - compressible material adhered to the flat strip.

Figure 2 — Fold over or clam shell splice protector

3.2 Materials

Materials which are not specified or which are not specifically described are left to the discretion of the manufacturer. However, the following requirements shall be met:

- all materials that are likely to come in contact with personnel shall meet appropriate health and safety regulations;
- the sealing materials shall be compatible with the materials of the fibres and the mechanical splice parts;
- the sealant or encapsulant material shall be free of dirt and air inclusions;
- all components of the splice shall be resistant to solvents and degreasing agents that are typically used to clean and degrease fibres and cables (like alcohols, white spirit and cable cleaners);
- exposed metallic parts shall be resistant to the corrosive influences they may encounter during the lifetime of the product;
- exposed polymer materials shall be resistant to mould growth.

3.3 Dimensions

Outline dimensions are specified in Clause 5. All other dimensions are left to the discretion of the manufacturer.

iTeh STANDARD PREVIEW 3.4 Colour and marking (standards.iteh.ai)

Marking of the product or packaging shall be in the following order of precedence:

- SIST EN 50411-3-3:2012
<https://standards.iteh.ai/catalog/standards/sist/dcdcc92f-64c4-483b-b7eb-c8df5cfe8fd5/sist-en-50411-3-3-2012>
- a) identification of supplier or manufacturer;
 - b) manufacturing date code: year/week;
 - c) manufacturers part number;
 - d) variant identification number.

4 Variants

Table 1 — Optical fibre fusion splice protector, for category U – Variants

EN 50411-3-3– XX₁ – XX₂ – XX₃ – X₄ – X₅– XX₆

Variant No. XX ₁	Fusion splice protector type
S1	Heatshrink single fibre
S2	Heatshrink ribbon fibre (up to 4 fibres)
S3	Heatshrink ribbon fibre (up to 8 fibres)
S4	Heatshrink ribbon fibre (up to 12 fibres)
F1	Fold over type 1 (metal/mastic) single fibre
