Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8489-4 was prepared by Technical Committee ISO/TC 72, *Textile machinery and allied machinery and accessories*, Subcommittee SC 2, *Winding and preparatory machinery for fabric manufacture*.

This first edition of ISO 8489-4 cancels and replaces ISO 324:1978, which has been technically revised.

ISO 8489 consists of the following parts, under the general title *Textile machinery and accessories — Cones for cross winding*:

- Part 1: *Recommended main dimensions*
- Part 2: *Dimensions, tolerances and designation of cones with half angle 3 degrees 30'*
- Part 3: *Dimensions, tolerances and designation of cones with half angle 4 degrees 20'*
- Part 4: *Dimensions, tolerances and designation of cones with half angle 4 degrees 20' for winding for dyeing purposes*
- Part 5: *Dimensions, tolerances and designation of cones with half angle 5 degrees 57'*

Textile machinery and accessories — Cones for cross winding —

Part 4:

Dimensions, tolerances and designation of cones with half angle $4^{\circ} 20'$ for winding for dyeing purposes

1 Scope

This part of ISO 8489 specifies the main dimensions, tolerances and designation of cones for cross winding for dyeing purposes with a half angle of cone $4^{\circ} 20'$. Furthermore, directives are given for the characteristics of cones and for the control of the diameters and lengths of the cone.

2 Normative references

The following standards contain provisions which, through reference in this text, constitute provisions of this part of ISO 8489. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this part of ISO 8489 are encouraged to investigate the possibility of applying the most recent editions of the standards indicated below. Members of IEC and ISO maintain registers of currently valid International Standards.

ISO 286-1:1988, *ISO system of limits and fits — Part 1: Bases of tolerances, deviations and fits*.

ISO 8489-1:1995, *Textile machinery and accessories — Cones for cross winding — Part 1: Recommended main dimensions*.

3 Dimensions and tolerances

See figure 1 and table 1.

Dimensions in millimetres

Figure 1 — Cones

Table 1 — Dimensions

Dimensions in millimetres

d		d_1		l	
nominal	tolerance	nominal	tolerance	nominal	tolerance
55	$\pm 0,25$	33	$\pm 0,25$	145	± 1
59 ^{*)}	$\pm 0,25$	33	$\pm 0,25$	170 ^{*)}	$\pm 1,5$
NOTES 1) The width of wound yarn shall not exceed $l - 25$ mm. 2) The deviations from the nominal value $4^\circ 20'$ of the half angle of the cone are limited by the tolerances for d , d_1 and l , as indicated in the table. They do not influence the practical use of the cones during dyeing and further processes.					
*) Main dimensions as recommended in ISO 8489-1.					

4 Characteristics

The following details shall be specified by the manufacturer:

- cone material [suitable metal or plastic or an impregnated or lacquered paper (resistant to boiling)],
- surface treatment;
- nature of yarn to be wound;
- thickness of cone wall (corresponding to the nature of the yarn to be wound);
- number, size and location of perforations.
