**About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

**About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

**IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)**

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

**Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

**IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

**IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)**

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

**IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

**IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [csc@iec.ch](mailto:csc@iec.ch).

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**CONSUMER TERMINAL FUNCTION FOR ACCESS TO IPTV  
AND OPEN INTERNET MULTIMEDIA SERVICES –****Part 4-2: Examples of IPTV protocol sequences**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.  
<https://standards.iteh.ai/catalog/standards/sist/2641779-11b8-4361-83f1-706af01c9e29/iec-62766-4-2-2017>
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62766-4-2 has been prepared by IEC technical committee 100: Audio, video and multimedia systems and equipment.

The text of this International Standard is based on the following documents:

CDV	Report on voting
100/2547/CDV	100/2661/RVC

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

This International Standard is to be used in conjunction with IEC 62766-4-1.

A list of all parts in the IEC 62766 series, published under the general title *Consumer terminal function for access to IPTV and open internet multimedia services*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## iTeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 62766-4-2:2017](#)

<https://standards.iteh.ai/catalog/standards/sist/f264f779-11b8-4361-83f1-706af01cce29/iec-62766-4-2-2017>

## INTRODUCTION

The IEC 62766 series is based on a series of specifications that was originally developed by the OPEN IPTV FORUM (OIPF). They specify the user-to-network interface (UNI) for consumer terminals to access IPTV and open internet multimedia services over managed or non-managed networks as defined by OIPF.

# CONSUMER TERMINAL FUNCTION FOR ACCESS TO IPTV AND OPEN INTERNET MULTIMEDIA SERVICES –

## Part 4-2: Examples of IPTV protocol sequences

### 1 Scope

This part of IEC 62766 provides informative examples of features defined in IEC 62766-4-1.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 62766-4-1, *Consumer terminal function for access to IPTV and open internet multimedia services – Part 4-1: Protocols*<sup>1</sup>

IETF RFC 3261, *SIP: Session Initiation Protocol*

IETF RFC 3455, *Private Header (P-Header) Extensions to the Session Initiation Protocol (SIP) for the 3rd-Generation partnership Project (3GPP)*

IETF RFC 3588, *Diameter Base Protocol*

IETF RFC 3611, *RTP Control Protocol Extended Reports (RTCP XR)*

IETF RFC 4825, *The Extensible Markup Language (XML) Configuration Access Protocol (XCAP)*

3GPP TS 29.199-4, *Open Service Access (OSA); Parlay X web services; part 4: Short messaging*

Broadband Forum TR-135, *Data Model for a TR-069 Enabled STB*

### 3 Terms, definitions and abbreviations

For the purposes of this document, the terms, definitions and abbreviations given in IEC 62766-4-1 apply.

### 4 Examples of IPTV protocol sequences

#### 4.1 General

All the examples in this document are based on the HNI-IGI HTTP option.

---

<sup>1</sup> Under preparation. Stage at time of publication: IEC CDV 62766-4-1:2016.

## 4.2 IPTV service functions protocol sequences

### 4.2.1 COD Sequences

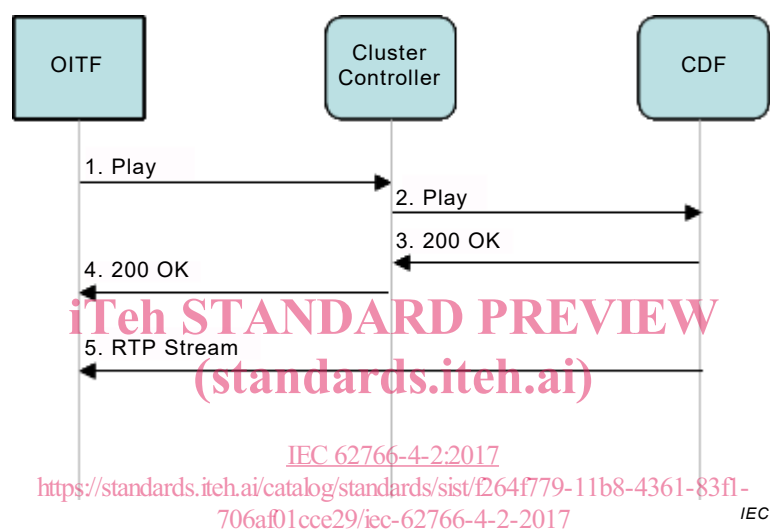

#### 4.2.1.1 RTSP specific usage on UNIS-11 and NPI-10 for the managed model

In this example, the RTSP delivery parameters have been obtained as indicated in IEC 62766-4-1.

The RTSP URI is: `rtsp://Cluster.orangeCDN.net/chevaliers_du_ciel`

The session ID is 940211290776250.

Figure 1 depicts an RTSP Procedure on UNIS-11 for managed model.

**Figure 1 – RTSP Procedure on UNIS-11 for managed model**

The call flow steps shown in Figure 1 are described further as follows:

**Step 1:** The OITF sends an RTSP PLAY to the Cluster Controller

- PLAY `rtsp://Cluster.orangeCDN.net/chevaliers_du_ciel`  
 CSeq: 1981  
 Session: 940211290776250

**Step 2:** The Cluster Controller forwards the PLAY message to the CDF

- PLAY `rtsp://server1.Cluster.orangeCDN.net/chevaliers_du_ciel`  
 CSeq: 1981  
 Session: 940211290776250

**Step 3:** The CDF replies to the Cluster Controller

- 200 OK  
 CSeq: 1981  
 Session: 940211290776250

**Step 4:** The Cluster Controller replies to the OITF with the appropriate RTSP session ID

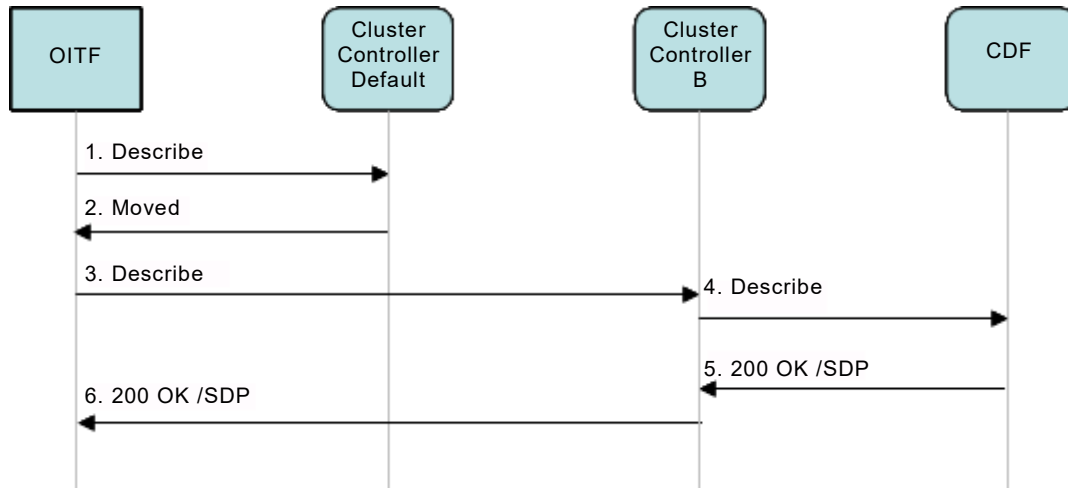

- 200 OK  
 CSeq: 1981  
 Session: 940211290776250

**Step 5:** The RTP media starts

**4.2.1.2 RTSP specific usage on UNIS-11 and NPI-10 for the unmanaged model**

The following example is only one example of performing redirection at initiation using the 303 Moved message. It does not take into account the effects of Network Address Translation (NAT).

Figure 2 depicts an RTSP Usage for COD on UNIS-11 and NPI-10.

**iTeh STANDARD PREVIEW**

IEC

**Figure 2 – RTSP Usage for COD on UNIS-11 and NPI-10**

The call flow steps shown in figure 2 are described further as follows:

**Step 1:** The OITF to the Cluster Controller

- DESCRIBE rtsp://Cluster.orangeCDN.net/chevaliers\_du\_ciel RTSP/1.0  
CSeq 1306  
Accept: application/sdp

**Step 2:** The Cluster Controller responds to the OITF indicating redirection to Cluster Controller B

- RTSP/1.0 302 Moved Temporarily  
CSeq 1306  
Location: rtsp://Cluster\_B.orangeCDN.net/ chevaliers\_du\_ciel RTSP/1.0

**Step 3:** The OITF sends a DESCRIBE to the indicated Cluster Controller

- DESCRIBE rtsp://Cluster\_B.orangeCDN.net/chevaliers\_du\_ciel  
CSeq: 1979  
Accept: application/sdp

**Step 4:** The Cluster Controller chooses the appropriate CDF and forwards the DESCRIBE message to it

- DESCRIBE rtsp://Server1.orangeCDN.net/chevaliers\_du\_ciel RTSP/1.0  
Cseq: 1979  
Accept: application/sdp

**Step 5:** The CDF replies to the Cluster Controller with the appropriate SDP

- 200 OK  
Cseq: 1979  
content-Type: application/sdp

content length: .....  
 /// SDP ///

**Step 6:** The Cluster Controller replies to OITF with the appropriate SDP

– 200 OK  
 CSeq: 1979  
 content-Type: application/sdp  
 content length: ...  
 ///SDP ///

## 4.2.2 Content reporting and content reporting management

### 4.2.2.1 Content reporting

Figure 3 shows a call flow for an OITF initiating content reporting. Below is a brief description of the call flow.

**Step 1:** It is assumed that the OITF established a regular scheduled content session, and that the IPTV Control FE indicated its willingness to receive content Reporting Info Package (through Recv-Info header in SIP 200 OK response to the INVITE). It is assumed that the timer for content reporting is pre-configured.

**Step 2:** If zapping is performed and stopped for the configured timer or in case of powerup without zapping and the user settled on a channel for the configured timer, the OITF issues a request to the IG for content reporting.

**Step 3:** The IG validates the request then issues a SIP INFO to the network including the content Reporting Info Package to report the watched content.

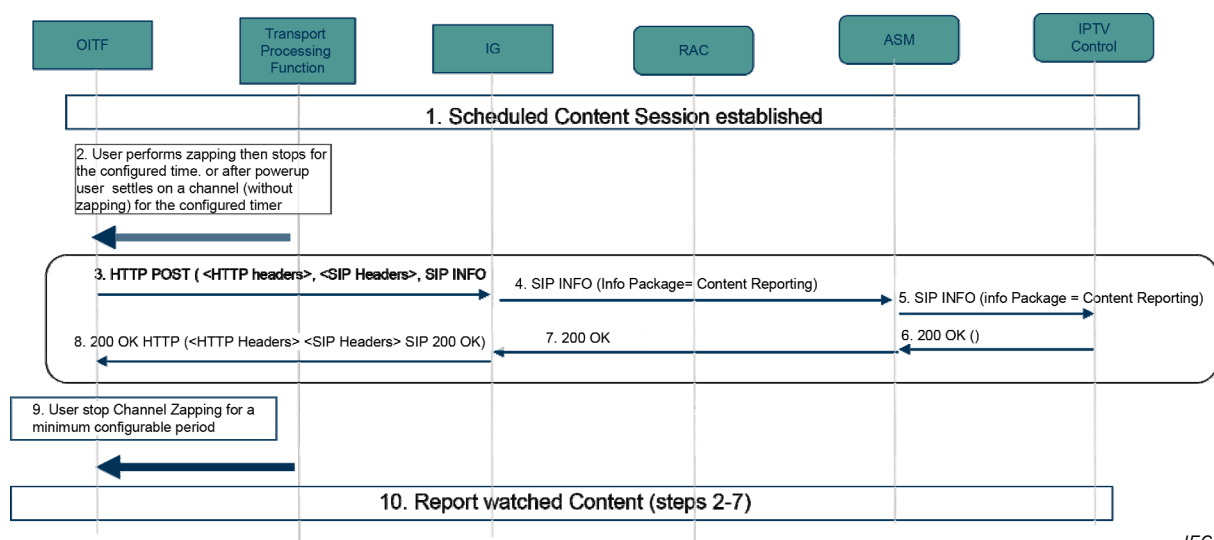

**Step 4:** The ASM forwards the request to the IPTV control FE.

**Steps 5-7:** The IPTV control FE generates a 200 OK that is proxied all the way to the IG, then from the IG to the OITF it is forwarded in an HTTP 200 OK response.

**Step 8:** The user performs channel zapping.

**Step 9:** The user stops zapping and finally settles on a channel for the configured timer.

**Step 10:** This step reports the watched content and is similar to steps 2-7.

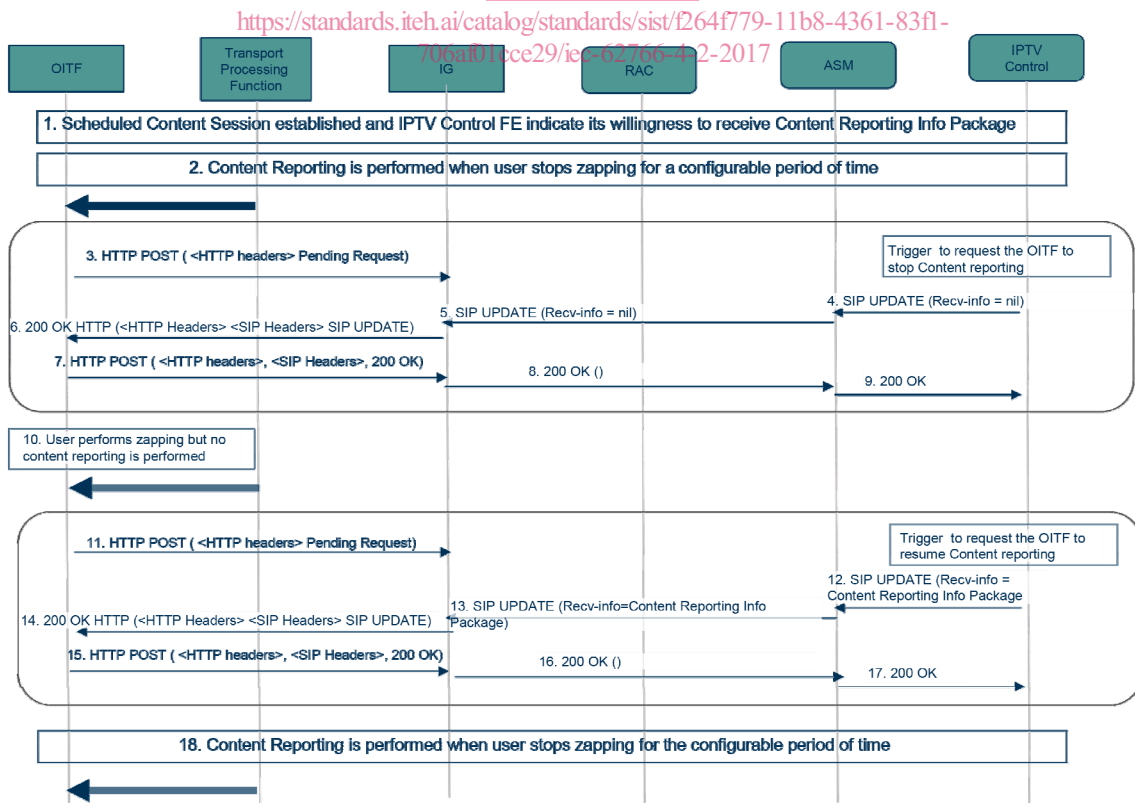

IEC

**Figure 3 – Content reporting**

**4.2.2.2 Management of content reporting**

Figure 4 shows a call flow for the management of content reporting. Below is a brief description of the call flow.

- Step 1:** The OITF established a scheduled content and performs content reporting as required by the IPTV Control FE.
- Step 2:** The OITF performs content reporting when user performs zapping then stops for the configured time.
- Step 3:** The OITF issues an HTTP HNI-IG PENDING\_IG request to the IG. This request can be issued at any time after step 1.
- Step 4:** At some point in time, the IPTV control FE decided that it does not want any more content reporting. The IPTV control FE sends a SIP UPDATE with the Recv-Info header set to 'nil' to the ASM to that effect.
- Step 5:** The ASM forwards the SIP UPDATE to the IG.
- Step 6:** The IG forwards the SIP UPDATE in an HTTP 200 OK response to the OITF.
- Steps 7-9:** The OITF issues an HTTP POST request to the IG that includes the SIP 200 OK response. The SIP 200 OK is forwarded all the way to the IPTV control FE.
- Step 10:** The user performs channel zapping and no content reporting is performed.
- Step 11:** The OITF issues an HTTP HNI-IGI PENDING\_IG request to the IG.
- Steps 12-14:** These steps request the OITF to start reporting the watched content and are similar to steps 4-6. The difference is that the Recv-Info header is set to content Reporting Info Package.
- Steps 15-17:** The OITF issues an HTTP POST request to the IG that includes the SIP 200 OK response. The SIP 200 OK is forwarded all the way to the IPTV Control FE.
- Step 18:** This step reports the watched content. See Figure 4 for the detailed call flow.

IEC

**Figure 4 – Management of content reporting**

### 4.2.3 Purchase of digital media

#### Purchase request procedure of selected digital media related to the content

Confirmation process: After retrieving and advertising the digital media, users can select the digital media they want to buy. When a user selects one digital media, the OITF pops up a dialog box to let the user confirm the selected digital media for purchase purpose.

Repeat billing check: Before sending the purchase request for digital media, the OITF shall check the user's profile first (in order to avoid repeat billing). If the requested digital media is already recorded in user's profile, the OITF pops up a dialog box to let user know the repeat billing, and then stop sending the purchase request.

If the requested digital media is not recorded in user's profile, the OITF sends the HTTP purchase request to IG, and IG generates a SIP request to IPTV Control FE through ASM FE, and then the IPTV Control FE sends the purchase request (ACR) to Charging FE.

After receiving the purchase response (ACA) from Charging FE, and if the purchase is successful, the IPTV Control FE sends digital Purchase Request to IPTV applications FE to update the user's profile, and then the IPTV applications FE sends the XCAP PUT to IPTV Service Profile FE to update the purchased digital media record.

After receiving the HTTP response sent from IPTV Service Profile FE, the IPTV applications FE sends the response to IPTV Control FE. The IPTV Control FE sends the SIP 200 OK response (with no message body) to IG through ASM FE if purchase request success; otherwise, the IPTV Control FE sends the SIP 403 Forbidden response (the message body is Result-Code that is defined in IETF RFC 3588) to IG through ASM FE. Finally, the IG sends the HTTP 200 OK to OITF with purchase result (it can be either "success" or Result-Code).

Figure 5 shows the purchase request procedure of selected digital media related to the content.
