### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

#### IEC Catalogue - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

#### IEC publications search - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary of electronic and electrical terms containing 20 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [csc@iec.ch](mailto:csc@iec.ch).

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Catalogue IEC - [webstore.iec.ch/catalogue](http://webstore.iec.ch/catalogue)

Application autonome pour consulter tous les renseignements bibliographiques sur les Normes internationales, Spécifications techniques, Rapports techniques et autres documents de l'IEC. Disponible pour PC, Mac OS, tablettes Android et iPad.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire en ligne de termes électroniques et électriques. Il contient 20 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans 15 langues additionnelles. Egalelement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

#### Glossaire IEC - [std.iec.ch/glossary](http://std.iec.ch/glossary)

65 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

#### Recherche de publications IEC - [www.iec.ch/searchpub](http://www.iec.ch/searchpub)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [csc@iec.ch](mailto:csc@iec.ch).

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

## FRAMEWORK FOR ENERGY MARKET COMMUNICATIONS –

### Part 351: CIM European market model exchange profile

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62325-351 has been prepared by IEC technical committee 57: Power systems management and associated information exchange.

This second edition cancels and replaces the first edition published in 2013. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) Add the attribute "cancelledTS" to the class TimeSeries. The attribute is defined in IEC 62325-301 Edition 1, and was not use in the European style market profile but is now necessary for the Transparency Regulation.
- b) Add the attribute "quality" to the class "Point" and a new CIMDataType "QualityString". The attribute is defined in IEC 62325-301 Edition 1, and was not use in the European style market profile. This attribute will enable to develop the data exchange related to the settlement business process within a synchronous power system for cross-border flows.

- c) Add an association between the class “Reason” and the class “Series\_Period”. This association enables to report errors on the “Series\_Period”.
- d) Add the class “MktGeneratingUnit” from IEC 62325-301. This class is necessary to publish information on generation units as per Transparency Regulation.
- e) Add a class “VoltageLevel” from IEC 61970-301. This class is necessary to publish information as per Transparency Regulation.
- f) Add a class “Location” from IEC 61968-11. This class is necessary to publish information as per Transparency Regulation.
- g) Class “MarketParticipant”, change the cardinality of the attribute “mRID” to [0..1] and add the attribute “name” from IEC 62325-301 as [0..1].
- h) Class “Price”, change the cardinality of attribute “amount” from [1] to [0..1] and add an association with the class “TimeSeries” as [0..\*] to [0..\*].
- i) Add a class “ConstraintDuration” from IEC 62325-301 necessary for activation constraints on the balancing market
- j) Add the constraints on datatypes.

The text of this standard is based on the following documents:

CDV	Report on voting
57/1618/CDV	57/1681/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

**(standards.iteh.ai)**

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

[IEC 62325-351:2016](#)

A list of all the parts in the IEC 62325 series, published under the general title *Framework for energy market communications*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This part of IEC 62325 is one of the IEC 62325 series for deregulated energy market communications.

The principal objective of the IEC 62325 series is to produce standards which facilitate the integration of market application software developed independently by different vendors into a market management system, between market management systems and market participant systems. This is accomplished by defining message exchanges to allow these applications or systems access to public data and exchange information independent of how such information is represented internally.

The common information model (CIM), i.e. IEC 62325-301, IEC 61970-301 and IEC 61968-11, specifies the basis for the semantics for message exchange.

The European style market profile is based on different parts of the CIM IEC standards and specifies the business processes and the content of the messages exchanged.

This part of IEC 62325 provides the European style market profile specifications that support the European style design electricity markets. These electricity markets are based on the European regulations, and on the concepts of third party access and zonal markets. This part of IEC 62325 was originally based upon the work of the European Transmission System Operators (ETSO) and then on the work of the European Network of Transmission System Operators (ENTSO-E) on electronic data interchange.

## ITeh STANDARD PREVIEW (standards.iteh.ai)

[IEC 62325-351:2016](#)

<https://standards.iteh.ai/catalog/standards/sist/e39598be-45cf-409a-884f-0e4e6aa72b38/iec-62325-351-2016>

## FRAMEWORK FOR ENERGY MARKET COMMUNICATIONS –

### Part 351: CIM European market model exchange profile

#### 1 Scope

This part of IEC 62325 is applicable to European style electricity markets.

This part of IEC 62325 specifies a UML package which provides a logical view of the functional aspects of European style market management within an electricity markets.

This package is based on the common information model (CIM). The use of the CIM goes far beyond its application in a market management system.

Due to the size of the complete CIM, the object classes contained in the CIM are grouped into a number of logical packages, each of which represents a certain part of the overall power system being modelled. Collections of these packages are progressed as separate International Standards.

From the CIM packages regional contextual models are built to cover the market information interchange requirements for a given region, i.e. the business context. A region may be a continent where common electricity market designs are used for the exchange of information (Europe, North America, Asia, etc.). It may also be a specific country or an organization that has particular needs and wishes to benefit from the CIM.

[IEC 62325-351:2016](#)

This new edition of IEC 62325-351 contains new classes and associations required to comply with new business development for European style market, and in particular the implementation of the European regulations (No. 1227/2011 and No. 543/2013).

#### 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC TS 61970-2:2004, *Energy management system application program interface (EMS-API) – Part 2: Glossary*

IEC 62325-450:2013, *Framework for energy market communications – Part 450: Profile and context modelling rules*

IEC 62361-100, *Power systems management and associated information exchange – Interoperability in the long term – Part 100: Naming and design rules for CIM profiles to XML schema mapping*

#### 3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC TS 61970-2, as well as the following apply.

**3.1****aggregate business information entity****ABIE**

re-use of an aggregate core component (ACC) in a specified business

**3.2****aggregate core component****ACC**

collection of related pieces of business information that together convey a distinct business meaning, independent of any specific business context

Note 1 to entry: Expressed in modelling terms, this is the representation of an object class, independent of any specific business context.

[SOURCE: ISO/TS 15000-5:2005, Clause 9]

**3.3****based on****IsBasedOn**

use of an artefact that has been restricted according to the requirements of a specific business context

[SOURCE IEC 62325-450:2013, 3.4]

**3.4****iTeh STANDARD PREVIEW****business context**

specific business circumstance (as identified by the values of a set of context categories, allowing different business circumstances to be uniquely distinguished)

[SOURCE: ISO/TS 15000-5:2005, 4.6.2] <https://standards.iteh.ai/catalog/standards/sist/e39598be-45cf-409a-884f-0e4e6aa72b38/iec-62325-351-2016>

**3.5****information model**

information model is a representation of concepts, relationships, constraints, rules, and operations to specify data semantics for a chosen domain of discourse

Note 1 to entry: It can provide shareable, stable, and organized structure of information requirements for the domain context.

**3.6****internal European market****IEM**

market of any commodity, service, etc. within the European Community

Note 1 to entry: In particular, European Directives and Regulation are defining the energy IEM.

Note 2 to entry: These software systems in an electricity market may include support for capacity allocation, scheduling energy, ancillary or other services, real-time operations and settlements.

**3.7****profile**

basic outline of all the information that is required to satisfy a specific environment

## 4 European style market concepts

### 4.1 From the CIM information model to the European style market profile

#### 4.1.1 General

The European style market profile is a regional contextual model as defined in IEC 62325-450. IEC 62325-450 provides the contextual derivation rules to be applied from the abstract CIM core concepts to generate the regional contextual model.

The common information model (CIM) is an abstract model. A CIM-compliant implementation does not need to include all classes, attributes, or associations in the CIM standard. Profiles are defined to specify which elements shall be included, i.e. mandatory elements, in a particular use of the CIM, as well as which elements are optional.

As stated in IEC 62325-450 and outlined in Figure 1, the definition of CIM profiles follows a layered modelling framework from the CIM information model down to the specification of messages based on CIM concepts through the definition of different regional contextual models and their subsequent contextualized documents for information exchange.

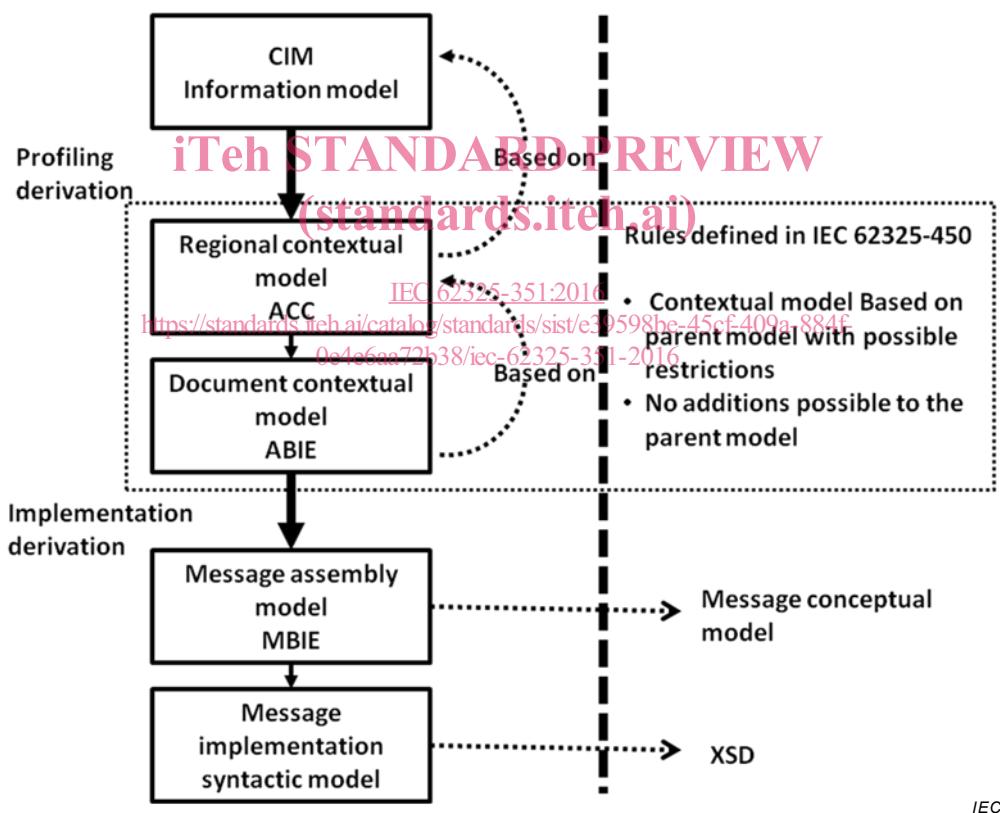

Figure 1 – IEC 62325-450 modelling framework

From the CIM which provides the overall semantic model for the electricity industry, regional contextual models are built to cover the electricity market information interchange requirements for a given region, i.e. the business context, in compliance with IEC 62325-450 rules.

The European style market profile (ESMP) is a regional contextual model based on the CIM artefacts where some particular artefacts are refined respecting a set of defined rules to cater for specific European style market requirements. These artefacts are based on the CIM artefacts on which they are built.

The European style market profile is the cornerstone to derive contextualized documents catering for specific information interchange functional requirements. These document contextual models are defined in other standards of the IEC 62325 series; and a dedicated IEC 62325-451-x<sup>1</sup> (x going from 1 to n) per main business process describes the related information interchange requirements. Additional constraints are thus introduced on the European style market profile on which they are built.

The final modelling step applies standardized message assembly rules in order to provide an information structure for information interchange. All syntactic specific electronic documents are built from the message assembly models. This last level is covered by IEC 62361-100.

#### **4.1.2 Applying the framework to the European style electricity market**

Within Europe a target has been defined for the implementation of the energy internal European market (IEM) and in particular the electricity market. The harmonization of business processes has been carried out in particular for the data interchange between market participants such as transmission system operators (TSO), distribution system operators (DSO), balance responsible parties, etc. These business processes address a number of energy market activities such as congestion management, scheduling, reserve resource management, explicit auction for transmission capacity, settlement, reconciliation, etc.

The result of this harmonization work has been taken into account to define the European style market profile based on the CIM UML model. The European style market profile is thus a regional contextual model as defined in IEC 62325-450.

## **iTeh STANDARD PREVIEW**

The European style market profile is a first level of contextual model that covers generically all the required information conveyed in the different exchanged messages gathered by the defined business processes.

### **[IEC 62325-351:2016](#)**

The European style market profile is therefore the smallest sub-set of the CIM information model, derived by restrictions, from which all the exchanges of information are derived for all the European market business processes.

#### **4.1.3 Examples for building a European style market profile**

Each UML artefact can be potentially restricted in order to refine and define the business requirements applied to the current European style market profile.

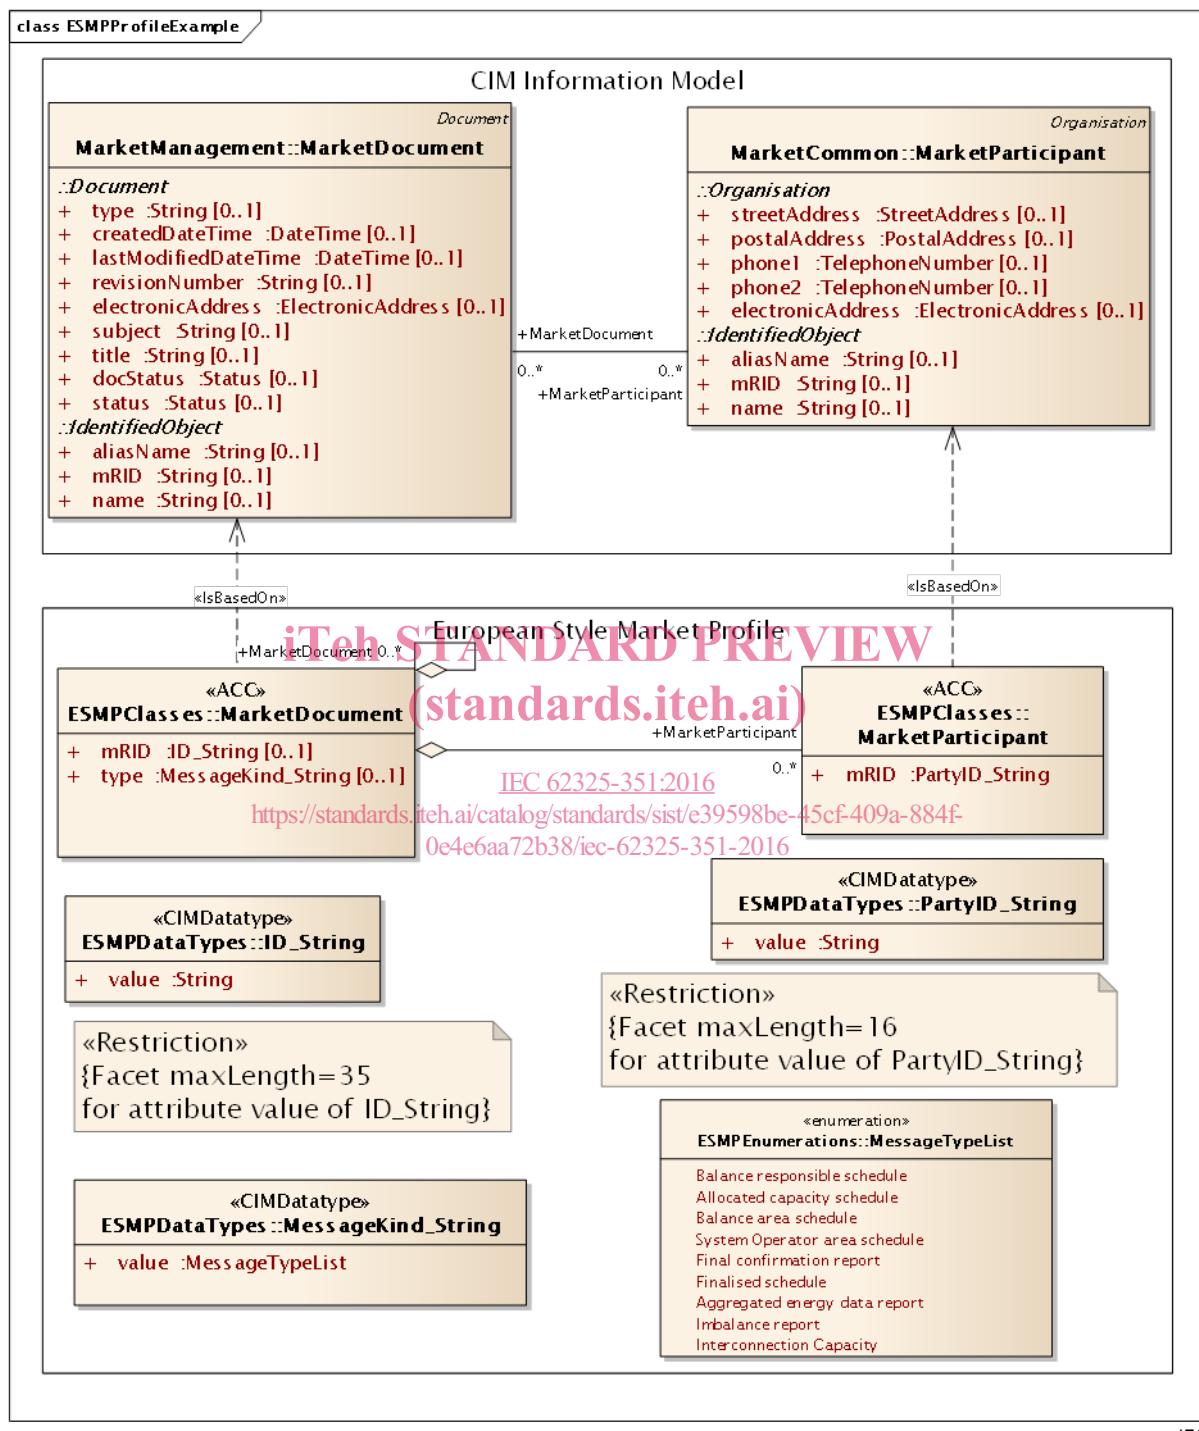

The example in Figure 2 illustrates how the CIM information model is restricted into a profile for the European style market.

- a) Classes: it is possible to restrict each class of the CIM by selecting a subset of its attribute list since all CIM attributes are optional (i.e. their multiplicity is 0..1). For example, the CIM MarketDocument class is restricted into the profile class with only two attributes, mRID and type.
- b) Attributes: it is possible to restrict each attribute in the profile by applying restrictions to its related datatypes (see Datatypes below) and its multiplicity. The new multiplicity shall be included in the multiplicity from the parent BasedOn class. For example, in the European style market profile, the attribute mRID from MarketParticipant is mandatory (i.e. multiplicity = 1..1) while in the parent BasedOn class from the CIM, the attribute is optional (i.e. multiplicity = 0..1).
- c) Relationships: it is possible to restrict each relationship between CIM Classes at the profile level. The kinds of restriction uniquely concern the multiplicity and qualification of the end role.

---

<sup>1</sup> IEC 62325-451-1, IEC 62325-451-2, IEC 62325-451-3, IEC 62325-451-4, IEC 62325-451-5 and IEC 62325-451-6 are published; others are to be published.

- d) Datatypes: it is possible to restrict the CIM Datatypes by defining facets on the value space of the datatype. For example, the CIM attribute type of MarketDocument is a CIM String while in the profile it is restricted by an enumeration (i.e. MessageTypeList) to indicate the list of valid types for a MarketDocument.

**Figure 2 – Example of restrictions applied to CIM for a profile**

NOTE In the examples, the list of attributes and enumerated literals are not complete. They are just given as examples.

#### 4.2 European style market package structure

Figure 3 shows the main package structure of this profile that is composed of:
