Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 13596 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Subcommittee SC 4, *Aerospace fastener systems*.

Aerospace — Inserts, self-locking, with MJ threads, closed type, in metallic material, coated or uncoated — Dimensions

1 Scope

This International Standard specifies the dimensions of closed inserts, with self-locking MJ threads, in metallic material, coated or uncoated, for honeycomb and composite materials. The classification referring to strength and temperature, depending on the core material and potting compound, is not specified.

This International Standard is only applicable to the compilation of aerospace product standards.

2 Normative reference

The following normative document contains provisions which, through reference in this text, constitute provisions of this International Standard. For dated references, subsequent amendments to, or revisions of, any of these publications do not apply. However, parties to agreements based on this International Standard are encouraged to investigate the possibility of applying the most recent edition of the normative document indicated below. For undated references, the latest edition of the normative document referred to applies. Members of ISO and IEC maintain registers of currently valid International Standards.

3 Configuration and dimensions

See Figure 1 and Table 1. Dimensions and tolerances are expressed in millimetres. They apply to inserts after any surface coating(s).

Figure 1

Table 1

Diameter code	Thread ^a	<i>A</i>	<i>B</i>	<i>C</i>	<i>D</i>	<i>E</i> ^b	<i>F</i>	
		± 0,25	± 0,25	0 – 0,25	≈	min.	nom.	tol.
030	MJ3 × 0,5-4H6H	14,2	9,3	2,4	3	6	9 or 12 or 15 or 19 or 22 or 25	± 0,25
040	MJ4 × 0,7-4H6H				4	8		
050	MJ5 × 0,8-4H6H				5	10	12 or 15 or 19 or 22 or 25	
060	MJ6 × 1-4H5H	17,5	11,9		6	12	15 or 19 or 22 or 25	

^a In accordance with ISO 5855-2

^b Effective length of a bolt thread engagement

4 Example of application
