About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MEASUREMENT OF CAVITATION NOISE IN ULTRASONIC
BATHS AND ULTRASONIC REACTORS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a Technical Specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical Specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

Technical Specification IEC 63001 has been prepared by IEC technical committee 87: Ultrasonics.

The text of this Technical Specification is based on the following documents:

Draft TS	Report on voting
87/681/DTS	87/693A/RVDTS

Full information on the voting for the approval of this Technical Specification can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

Terms in **bold** in the text are defined in Clause 3.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- transformed into an International Standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

ITEH STANDARD PREVIEW
(standards.iteh.ai)

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Ultrasonically induced **cavitation** is used frequently for immersion cleaning in liquids. There are two general classes of ultrasonically induced cavitation. **Transient cavitation** is the rapid collapse of bubbles. **Stable cavitation** refers to persistent pulsation of bubbles as a result of stimulation by an ultrasonic field. Both **transient cavitation** and **stable cavitation** may create significant localized streaming effects that contribute to cleaning. **Transient cavitation** additionally causes a localized shock wave that may contribute to cleaning and/or damage of parts. Both types of cavitation create acoustic signals which may be detected and measured with a **hydrophone**. This document provides techniques to measure and evaluate the degree of cavitation in support of validation efforts for ultrasonic cleaning tanks and cleaning equipment, as used, for example, for the purposes of industrial process control or for hospital sterilization.

<https://standards.iteh.ai/catalog/standards/sist/98b842e3-557a-4ce9-b518-755268f73db9/iec-ts-63001-2019>

MEASUREMENT OF CAVITATION NOISE IN ULTRASONIC BATHS AND ULTRASONIC REACTORS

1 Scope

This document, which is a Technical Specification, provides a technique of measurement and evaluation of ultrasound in liquids for use in cleaning devices and equipment. It specifies

- the cavitation measurement at $2,25f_0$ in the frequency range 20 kHz to 150 kHz, and
- the cavitation measurement by extraction of broadband spectral components in the frequency range 10 kHz to 5 MHz.

This document covers the measurement and evaluation of the cavitation, but not its secondary effects (cleaning results, sonochemical effects, etc.).

2 Normative references

There are no normative references in this document.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1 averaging time for cavitation measurement

t_{av}
length of time over which a signal is averaged to produce a measurement of cavitation

Note 1 to entry: Averaging time for cavitation is expressed in seconds (s).

3.2 cavitation

formation of vapour cavities in a liquid

3.2.1 transient cavitation inertial cavitation

sudden collapse of a bubble in a liquid in response to an externally applied acoustic field, such that an acoustic shock wave is created

3.2.2 stable cavitation

oscillation in size or shape of a bubble in a liquid in response to an externally applied acoustic field that is sustained over multiple cycles of the driving frequency

3.3 end of cable loaded sensitivity

$M_L(f)$

<of a **hydrophone** or **hydrophone assembly**> modulus quotient of the Fourier transformed output **voltage** $U(f)$ at the end of any integral cable or output connector of a **hydrophone** or **hydrophone-assembly**, when connected to a specific electric load impedance, to the Fourier transformed acoustic pressure $P(f)$ in the undisturbed free field of a plane wave in the position of the reference centre of the **hydrophone** if the **hydrophone** were removed, at a specified frequency

Note 1 to entry: The Fourier transform is in general a complex-valued quantity but for this document only the modulus is considered, and is expressed in volt per pascal, V/Pa,

Note 2 to entry: The term 'response' is sometimes used instead of 'sensitivity'.

3.4 end of cable loaded sensitivity level

$M_{L,dB}$

twenty times the logarithm to the base 10 of the ratio of the modulus of the **end of cable loaded sensitivity** $M_L(f)$ to a reference sensitivity of M_{ref} .

Note 1 to entry: $M_{L,dB} = 20 \log_{10} \frac{|M_L|}{M_{ref}}$ dB.

Note 2 to entry: The value of reference sensitivity M_{ref} is 1 V/Pa.

3.5 hydrophone

transducer that produces electric signals in response to waterborne acoustic signals

[SOURCE: IEC 60050-801:1994, 801-32-26] [1]

iTeH STANDARD PREVIEW
(standards.iteh.ai)
IEC TS 63001:2019
<https://standards.iteh.ai/catalog/standards/sist/98b842e3-557a-4ce9-b518-755268f73db9/iec-ts-63001-2019>

3.6 hydrophone assembly

combination of **hydrophone** and **hydrophone pre-amplifier**

[SOURCE: IEC 62127-3: 2007, 3.10] [2]

3.7 number of averages

N_{av}

number of waveforms captured and averaged in a **cavitation** measurement

3.8 operating volume

part of the liquid volume where cavitation effects are intended

3.9 operating frequency

f_0

driving frequency of ultrasound generator

Note 1 to entry: Operating frequency is expressed in hertz (Hz).

3.10 relative cavitation measurements

measurements made for purposes of comparison between two different cleaning environments or different locations within a cleaning environment, such that the **end-of-cable loaded sensitivity** of the **hydrophone** may be assumed to be identical in both cases

Note 1 to entry: Care should be taken to ensure that changes in hydrophone sensitivity do not affect the measurement.

3.11 sampling frequency

f_s
number of points per second captured by a digital waveform recorder

Note 1 to entry: Sampling frequency is expressed in hertz (Hz).

3.12 size of the capture buffer

N_{cap}
total number of points captured at a time by a digital waveform recorder

3.13 capture time

t_{cap}
length of time to capture N_{cap} points at a sampling frequency of f_s

Note 1 to entry: Capture time is expressed in seconds (s).

3.14 cavitation noise level

L_{CN}
level calculated from the cavitation noise at a frequency of $2,25 f_0$

Note 1 to entry: Cavitation noise is expressed in decibels (dB).

3.15 reference sound pressure

P_{ref}
sound pressure, conventionally chosen, equal to $20 \mu\text{Pa}$ for gases and to $1 \mu\text{Pa}$ for liquids and solids

Note 1 to entry: Reference sound pressure is expressed in pascals (Pa).

[SOURCE: IEC 60050-801:1994, 801-21-22] [1]

3.16 averaged power spectrum

$\overline{P^2}(f)$
power spectrum of the **instantaneous acoustic pressure** averaged over N_{av} measurements

Note 1 to entry: Averaged power spectrum is expressed in Pa^2 .

3.17 median of acoustic pressure

P_n
median value of amplitude values of spectral lines within B_f

Note 1 to entry: Median of acoustic pressure is expressed in pascals (Pa).

3.18 band filter

B_f
band filter located at a centre frequency of $2,25 f_0$

Note 1 to entry: Band filter is expressed in hertz (Hz).

3.19 direct field acoustic pressure

 P_0

portion of the RMS acoustic pressure signal arising directly from the ultrasonic driving excitation, at the **operating frequency** of the device

Note 1 to entry: RMS direct field acoustic pressure is expressed in pascals (Pa).

3.20 spectral acoustic pressure

 $P(f)$

Fast Fourier Transform of the hydrophone voltage divided by the end-of-cable loaded sensitivity

Note 1 to entry: Spectral acoustic pressure is expressed in pascals (Pa).

3.21 stable cavitation component

 P_s

portion of the RMS acoustic pressure signal arising from stable cavitation

Note 1 to entry: The stable cavitation component is expressed in pascals (Pa).

3.22 transient cavitation component

 P_t

portion of the RMS acoustic pressure signal arising from transient cavitation

Note 1 to entry: The transient cavitation component is expressed in pascals (Pa).

3.23 voltage

 $u(t)$

instantaneous voltage measured by analyser

IEC TS 63001:2019

<https://standards.iteh.ai/catalog/standards/sist/98b842e3-557a-4ce9-b518-755268f73db9/iec-ts-63001-2019>

Note 1 to entry: Voltage is expressed in volts (V).

3.24 voltage spectrum

 $U(f)$

Fast Fourier Transform of the voltage

Note 1 to entry: Voltage spectrum is expressed in volts (V).

3.25 frequency spacing

 Δf

distance of spectrum samples of a Fast Fourier Transform

Note 1 to entry: Frequency spacing is expressed in hertz (Hz).

3.26 indexed frequency

 f_k

frequency of index k at which the Fast Fourier Transform is evaluated

Note 1 to entry: $f_k = (k - 1) \Delta f$, where $k = 1, 2, \dots, N_{\text{cap}}$.
