NOTE For many common insulation compounds, for instance those based on PVC or on thermoplastic polyolefines, the volume resistivity at the operating temperature of the relevant cable is assumed to be $10^{18} \Omega \cdot \text{m}$. In these cases the general formula reduces to:

$$R = 0,0367 \cdot \log\left(\frac{D}{d}\right) \text{ M}\Omega \cdot \text{km}$$
