This amendment A1 modifies the European Standard EN 1471:1996; it was approved by CEN on 11 September 2003.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for inclusion of this amendment into the relevant national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This amendment exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and United Kingdom.

EN 1471:1996/A1:2003 (E)

Foreword

This document EN 1471:1996/A1:2003 has been prepared by Technical Committee CEN/TC 134 "Resilient, textile and laminate floor coverings", the secretariat of which is held by BSI.

This Amendment to the European Standard EN 1471:1996 shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by April 2004, and conflicting national standards shall be withdrawn at the latest by April 2004.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Slovakia, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This European Standard describes procedures for assessing the changes in appearance of textiles floor coverings. This standard reflects the existing state of the art.

7.2 Overall change procedure

Each assessor shall assess the contrast between the fatigued and the unfatigued specimens by comparing against the grades of the reference scale. The contrast shall be assessed from all directions whilst the table is slowly rotated.

As the table is turned, the appearance of the specimens may vary. In that case, an average of the worst and the best impression shall be made by each assessor.

When assessing the specimens, the individual appearance change factors mentioned in clause 3 shall be considered, the final grade being the overall average of all the factors viewed in all directions. Half grades may be awarded.

NOTE In cases of the Vetterman Drum, Hexapod and Castor Chair tests, only an absolute change in colour should be considered in this assessment, a change in colour attributable to any of the following should not be included as they are covered by the assessment process outlined in 7.3:

— Change in orientation of the pile;

— whitening/chalking;

— fading;

— glossing;

— staining;

— soiling.

One or more of the dominant factors may have an overriding influence in the final grade. If so, each assessor shall record the factor(s) for information.

For each specimen, note the individual grade selected from the appropriate reference scale (5.4).
