About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22.000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67.000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22.000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67.000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

Part 4: Coin secondary lithium cells, and batteries made from them

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61960-4 has been prepared by subcommittee 21A: Secondary cells and batteries containing alkaline or other non-acid electrolytes, of IEC technical committee 21: Secondary cells and batteries.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
21A/725/FDIS	21A/726/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61960 series, published under the general title *Secondary cells and batteries containing alkaline or other non-acid electrolytes – Secondary lithium cells and batteries for portable applications*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

iTeh STANDARD PREVIEW **(standards.iteh.ai)**

[IEC 61960-4:2020](#)

<https://standards.iteh.ai/catalog/standards/sist/f3abb208-077e-4b6d-a10c-36d2a518afa9/iec-61960-4-2020>

SECONDARY CELLS AND BATTERIES CONTAINING ALKALINE OR OTHER NON-ACID ELECTROLYTES – SECONDARY LITHIUM CELLS AND BATTERIES FOR PORTABLE APPLICATIONS –

Part 4: Coin secondary lithium cells, and batteries made from them

1 Scope

This part of IEC 61960 specifies performance tests, designations, markings, dimensions and other requirements for coin secondary lithium cells and batteries for portable applications and backup power supply such as memory backup applications.

The objective of this document is to provide the purchasers and users of coin secondary lithium cells and batteries with a set of criteria with which they can assess the performance of coin secondary lithium cells and batteries offered by various manufacturers.

This document defines a minimum required level of performance and a standardized methodology by which testing is performed and the results of this testing reported to the user. Hence, users will be able to establish the viability of commercially available cells and batteries via the declared specification and thus be able to select the cell or battery best suited for their intended application.

This document covers coin secondary lithium cells and batteries with a range of chemistries. Each electrochemical couple has a characteristic voltage range over which, during discharge, it releases its electrical capacity, a characteristic nominal voltage and a characteristic end-of-discharge voltage. Users of coin secondary lithium cells and batteries are requested to consult the manufacturer for advice.

This document also provides guidelines for designers of equipment using lithium batteries (see Annex A).

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050-482:2004, *International Electrotechnical Vocabulary (IEV) – Part 482: Primary and secondary cells and batteries*

IEC 62133-2:2017, *Secondary cells and batteries containing alkaline or other non-acid electrolytes – Safety requirements for portable sealed secondary cells, and for batteries made from them, for use in portable applications – Part 2: Lithium systems*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60050-482 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

charge recovery

capacity recovery

capacity that a cell or battery can deliver with subsequent recharge, after storage at a specific temperature, for a specific time, as a percentage of the rated capacity

3.2

coin cell

coin battery

small round cell or battery where the overall height is less than the diameter, containing non-aqueous electrolyte

3.3

end-of-discharge voltage

specified closed circuit voltage at which a discharge of a cell or battery is terminated

[SOURCE: IEC 60050-482:2004, 482-03-30, modified – The synonyms "final voltage", "cut-off voltage", and "end-point voltage" have been omitted and the words "closed circuit" and "cell" have been added to the definition.]

ITeH STANDARD PREVIEW
(standards.iteh.ai)

3.4

nominal voltage

suitable approximate value of voltage used to designate or identify a cell, or a battery

<https://standards.iteh.ai/catalog/standards/sist/3abb208-077e-4b6d-a10c->

Note 1 to entry: The nominal voltages of coin secondary lithium cells are shown in Table 1.

[SOURCE: IEC 60050-482:2004, 482-03-31, modified – "electrochemical system" has been omitted from the definition and the note has been added.]

3.5

rated capacity

quantity of electricity mAh (milliampere-hours) that a single cell or battery can deliver, when charged, stored and discharged under specified conditions and declared by the manufacturer

3.6

secondary lithium battery

unit which incorporates one or more secondary lithium cells and which is ready for use

Note 1 to entry: This unit incorporates adequate housing and a terminal arrangement and may have electronic control devices.

3.7

secondary lithium cell

secondary cell whose electrical energy is derived from oxidation and the reduction of lithium

Note 1 to entry: This cell is not ready for use in an application because it is not yet fitted with its final housing, terminal arrangement and electronic control device.

4 Parameter measurement tolerances

The overall accuracy of controlled or measured values, relative to the specified or actual values, shall be within the following tolerances:

- a) ± 1 % for voltage;
- b) ± 1 % for current;
- c) ± 1 % for capacity;
- d) ± 2 °C for temperature;
- e) $\pm 0,1$ % for time;
- f) $\pm 0,1$ mm for dimensions.

These tolerances comprise the combined accuracy of the measuring instruments, the measurement techniques used, and all other sources of error in the test procedure.

The details of the instrumentation used shall be provided in any report of results.

5 Cell designation and marking

5.1 Cell designation

Cells shall be designated with the following form:

A_1A_2DDHH

where

A_1 designates the positive electrode system in which:

- C or U is lithium cobalt oxide
- M is lithium manganese oxide
- NB is niobium oxide
- V is vanadium oxide
- T is lithium titanium oxide

A_2 designates the negative electrode system in which:

- C is carbon
- L is lithium aluminium alloy
- S is lithium silicon oxide/alloy
- T or TL is lithium titanium oxide

DD designates the diameter in mm

HH designates the height in 1/10 of mm

The requirements concerning code letters on electrochemical systems are given in Table 1.

Table 1 – Electrochemical systems in current practical use

Positive electrode	Electrolyte	Negative electrode	Nominal voltage (V)	Code letters
Lithium cobalt oxide	Non-aqueous solution with lithium salt	Carbon	3,7	UC
Lithium cobalt oxide		Lithium titanium oxide	3,0	UT
Vanadium oxide		Lithium aluminium alloy	3,0	VL
Lithium manganese oxide		Lithium aluminium alloy	3,0	ML
Lithium manganese oxide		Lithium silicon oxide/alloy	3,0	MS
Lithium cobalt oxide		Lithium titanium oxide	2,3	CTL
Niobium oxide		Lithium aluminium alloy	2,0	NBL
Lithium manganese oxide		Lithium titanium oxide	1,5	MT
Lithium titanium oxide		Lithium-carbon compound	1,5	TC
Lithium titanium oxide		Lithium aluminium alloy	1,5	TL
Lithium titanium oxide		Lithium silicon oxide	1,5	TS

The above code letters are given as examples. Each positive electrode and negative electrode shall be designated with one or two letters. Any code letter can be decided on by agreement between the manufacturer and user when there is a same chemistry which has different nominal voltages.

IEC

Key

- h* overall height of the cell
- d* diameter of the cell

Figure 1 – Dimensional characteristics

Coin secondary lithium cells complying with this document shall be designated by the following system consisting of code letters and numbers. For the electrochemical systems, the code letters shall be expressed using two letters (a maximum of three letters), followed by diameter and height expressed in that order. See Figure 1.

NOTE Notwithstanding the above specification, other designations can be used according to an agreement between manufacturer and user.

5.2 Marking

5.2.1 General

With the exception of small cells or batteries (see 5.2.2), each cell or battery shall be marked with the following information:

- a) cell designation, IEC or common;
- b) the year and month or week of manufacture (may be given in code);
- c) polarity of the positive (+) terminal;
- d) nominal voltage;
- e) name or trade mark of the manufacturer or supplier;
- f) cautionary advice;
- g) caution for ingestion of swallowable cells and batteries (see IEC 60086-4);
- h) combination of "secondary (rechargeable)" and "Li", or "secondary (rechargeable)" and "Li-ion".

5.2.2 Small cells or batteries

For cells or batteries that fit entirely within the ingestion gauge (Figure 3 in IEC 62133-2:2017), the designation specified in 5.2.1 a) and the polarity specified in 5.2.1 c) shall be marked on the cell or battery.

For cells or batteries with an internal AC resistance less than or equal to 3 Ω , intended to be user replaceable or not contained in the equipment, the additional marking of 5.2.1 h) shall be marked on the cell or battery.

All other information shown in 5.2.1 should be given in the specification sheet, or in the instruction manual or on the immediate package instead of on the cell or battery.

6 Electrical tests

6.1 General

Only cell or battery samples which are less than two months (60 days) old from the date of manufacture shall be used for the tests specified in this document.

Unless otherwise stated in this document, the following tests shall be done in an ambient temperature of 20 °C \pm 5 °C.

Tested cells or batteries should not exceed the upper limit charge voltage or end-of-discharge voltage limit during the test.

Coin secondary lithium cells or batteries have different characteristics and features in terms of voltage, discharge performance, capacity recovery after storage, and cycling depending on their chemistries. Therefore, conditions specified by the manufacturer shall be used in order to make the most of cell or battery characteristics.

The sample sizes and the sequence of the tests are described in Figure 2.

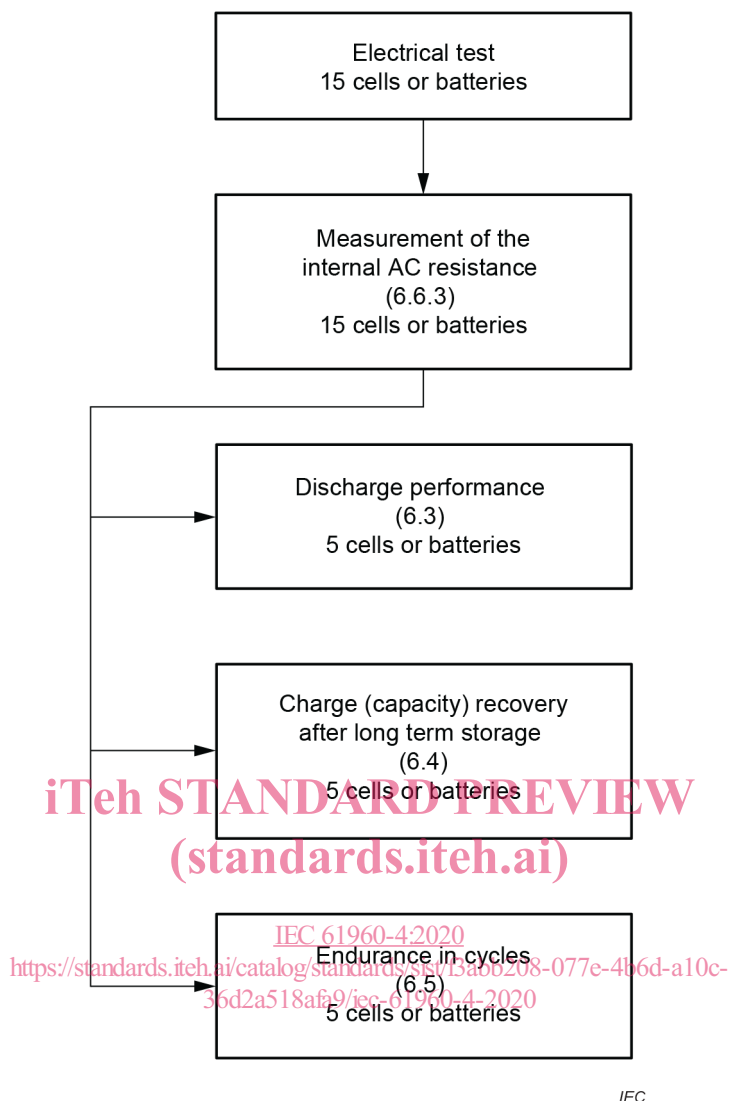

Figure 2 – Sample sizes and sequence of tests

6.2 Charging procedure for test purposes

There are two different charging methods for the coin secondary lithium cells or batteries: constant voltage charge and constant current charge. The charge method and conditions specified by the manufacturer shall be used. When such information is not available, the charge voltage shall be in accordance with Table 2.
