About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22,000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 000 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 16 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

Glossaire IEC - std.iec.ch/glossary

67 000 entrées terminologiques électrotechniques, en anglais et en français, extraites des articles Termes et Définitions des publications IEC parues depuis 2002. Plus certaines entrées antérieures extraites des publications des CE 37, 77, 86 et CISPR de l'IEC.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**UNDERWATER ACOUSTICS – HYDROPHONES –
CALIBRATION OF HYDROPHONES –****Part 2: Procedures for low frequency pressure calibration**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60565-2 has been prepared by IEC technical committee 87: Ultrasonics.

This first edition of IEC 60565-2, together with IEC 60565-1, replaces the second edition of IEC 60565 published in 2006. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition.

- 1) IEC 60565 has been divided into two parts:
 - Part 1: Procedures for free-field calibration;
 - Part 2: Procedures for low frequency pressure calibration (this document).
- 2) A relative calibration method has been added to Clause 8: Calibration by piezoelectric compensation.

- 3) A relative calibration method has been added to Clause 11: Calibration by **vibrating column**.
- 4) Clause 12: Calibration by static pressure transducer, has been added.
- 5) Annex A: Equivalent circuit of the excitation system for calibration with a **vibrating column**, has been deleted.
- 6) Subclauses 9.6, 9.7 and 9.8 have been moved to form a new Annex A: Advanced acoustic coupler calibration methods.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
87/720/FDIS	87/723/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

NOTE Words in **bold** in the text are terms defined in Clause 3.

A list of all parts in the IEC 60565 series, published under the general title *Underwater acoustics – Hydrophones – Calibration of hydrophones*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be

- reconfirmed, [IEC 60565-2:2019](https://standards.iteh.ai/catalog/standards/sist/8b556783-bad4-4b70-8750-828600b57cab/iec-60565-2-2019)
- withdrawn, <https://standards.iteh.ai/catalog/standards/sist/8b556783-bad4-4b70-8750-828600b57cab/iec-60565-2-2019>
- replaced by a revised edition, or
- amended.

INTRODUCTION

The purpose of this document is to establish the procedures for low frequency pressure calibrations of **hydrophones** in the frequency range from 0,01 Hz to several kilohertz.

To ensure the correctness of the calibrations, the **hydrophones** to be calibrated are "rigid" **hydrophones** with small size compared to the acoustic wavelength, and are not sensitive to vibration when calibrated.

Principles, procedures, and **uncertainties** of physical calibrations such as hydrostatic excitation, piezoelectric compensation, **pistonphone**, **vibrating column**, static pressure transducer, etc., and reciprocity calibrations in acoustic **couplers** are given in this document. Calibrations are carried out using one of these methods, depending on the different principles to be used, and its limitations to the sound field and the frequency range.

iTeh STANDARD PREVIEW

UNDERWATER ACOUSTICS – HYDROPHONES – CALIBRATION OF HYDROPHONES –

Part 2: Procedures for low frequency pressure calibration

1 Scope

This part of IEC 60565 specifies the methods for low frequency pressure calibration of **hydrophones** at frequencies from 0,01 Hz to several kilohertz depending on calibration method.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60050-801, *International Electrotechnical Vocabulary – Chapter 801: Acoustics and electroacoustics* (available at <http://www.electropedia.org/>)

IEC 60500:2017, *Underwater acoustics – Hydrophones – Properties of the hydrophone in the frequency range 1 Hz to 500 kHz*

[IEC 60565-2:2019](https://standards.iteh.ai/catalog/standards/sist/8b556783-bad4-4b70-8750-828600b57cab/iec-60565-2-2019)

3 Terms and definitions

For the purposes of this document, the terms and definitions given in IEC 60050-801, IEC 60500:2017 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at <http://www.electropedia.org/>
- ISO Online browsing platform: available at <http://www.iso.org/obp>

3.1

coupler

apparatus comprising a rigid fluid-filled chamber into which transducers and **hydrophones** can be inserted whose largest dimension is small compared to the wavelength

Note 1 to entry: In this document, the term small chamber is used interchangeably with **coupler**.

[SOURCE: IEC 60565:2006 [1]¹, 3.3, modified – In the definition, "small dimensions" has been replaced by "whose largest dimension is small compared to the wavelength".]

¹ Numbers in square brackets refer to the Bibliography.

3.2 diffraction factor

ratio of the root-mean-square value of the sound pressure, averaged over the part of the **hydrophone** designed to receive an incident plane wave sound pressure from a given direction to the free-field root-mean-square sound pressure that would exist at the position of the reference centre of the **hydrophone** if the **hydrophone** was removed

Note 1 to entry: Spatial average is undertaken first and then time average.

[SOURCE: IEC 60500:2017, 3.3, modified – In the definition, "the root-mean-square sound pressure" has been replaced by "the root-mean-square value of the sound pressure," and "the position of" has been added after "that would exist at".]

3.3 electrical transfer impedance

Z_{PH}

<of a transducer pair in a coupler> quotient of the Fourier transform of the open circuit voltage $\mathfrak{Z}(U_H(t))$ across the **hydrophone** electrical terminals, to the Fourier transform of the electrical current $\mathfrak{Z}(I_P(t))$ through the **projector**, when **projector** and **hydrophone** are mounted in a **coupler**

$$Z_{PH} = \frac{\mathfrak{Z}(U_H(t))}{\mathfrak{Z}(I_P(t))} \quad (1)$$

iTeh STANDARD PREVIEW

Note 1 to entry: The **electrical transfer impedance** is a complex-valued parameter. The modulus of the **electrical transfer impedance** is expressed in ohm, Ω . The phase angle is expressed in degrees, and represents the phase difference between the **hydrophone** voltage and the **projector** current.

Note 2 to entry: Because the **electrical transfer impedance** depends on the field conditions, the hydrostatic pressure, water temperature, and the length of the cable attached to the transducer, these parameters, as well as the frequency and the electrical terminals where the electrical impedance is measured, are specified.

[SOURCE: IEC 60565:2006 [1], 3.10, modified – In the term, "transducer pair" has been deleted. The domain "<of a transducer pair in a coupler>" has been added. In the definition, "complex ratio of the open circuit instantaneous voltage U_H " has been replaced by "quotient of the Fourier transform of the open circuit voltage $\mathfrak{Z}(U_H(t))$ ", "the instantaneous current I_P " has been replaced by "Fourier transform of the electrical current $\mathfrak{Z}(I_P(t))$ ", and "if **projector** and **hydrophone** are mounted in a free field with their principal axes in line and directed towards each other" has been replaced by "when **projector** and **hydrophone** are mounted in a **coupler**".]

3.4 hydrophone

electroacoustic transducer that produces electrical voltages in response to water borne pressure **signals**

Note 1 to entry: A **hydrophone** is designed to respond principally to underwater sound pressure.

Note 2 to entry: In general, a **hydrophone** can also produce a **signal** in response to non-acoustic pressure fluctuations (for example, those existing in a turbulent boundary layer during conditions of high water flow).

Note 3 to entry: **Hydrophone** types include reference **hydrophones** and measuring **hydrophones**. Measuring **hydrophones** are used in general measurements of sound fields, and reference **hydrophones** are principally used for calibration purposes (for example in comparison calibrations with measuring **hydrophones**).

Note 4 to entry: **Hydrophones** are principally used as listening devices, but in reciprocity calibration, a **hydrophone** is used as **reciprocal transducer**, not only acting as a **hydrophone**, but also as a **projector** (sound source).

Note 5 to entry: A **hydrophone** which is integrated with a digital acquisition system is sometimes termed a "digital **hydrophone**", but the combination is best considered as a measuring system, not a **hydrophone** alone.

Note 6 to entry: If a **hydrophone** is connected to a charge amplifier, the sensitivity of the **hydrophone** is sometimes described in terms of charge sensitivity, which is related to the voltage sensitivity of the **hydrophone** by its electrical capacitance.

[SOURCE: IEC 60500:2017, 3.17, modified – In the definition, "electrical **signals**" has been replaced by "electrical voltages".]

**3.5
pistonphone**

apparatus having a rigid piston which can be given a reciprocating motion of a known frequency and amplitude to establish a known sound pressure in a closed small chamber

[SOURCE: IEC 60565:2006 [1], 3.20, modified – In the definition, "so permitting the establishment of" has been replaced by "to establish", and "a closed chamber of small dimensions" by "a closed small chamber".]

**3.6
pressure sensitivity**

M_p

<of a **hydrophone**> quotient of the Fourier transform of the **hydrophone** open-circuit voltage **signal** $\mathfrak{Z}(U_H(t))$ to the Fourier transform of the acoustic pressure **signal** $\mathfrak{Z}(p(t))$ averaged over the **hydrophone** active element, at a specified frequency

$$M_p = \frac{\mathfrak{Z}(U_H(t))}{\mathfrak{Z}(p(t))} \tag{2}$$

Note 1 to entry: The **hydrophone pressure sensitivity** is a complex-valued parameter. The modulus of the **pressure sensitivity** of a **hydrophone** is expressed in units of volt per pascal, V/Pa. The phase angle of the sensitivity is expressed in degrees, and represents the phase difference between the electrical voltage and the sound pressure.

Note 2 to entry: The term "response" is sometimes used instead of "sensitivity".

Note 3 to entry: The **hydrophone** active element is the electroacoustic element of the **hydrophone** which is sensitive to sound pressure.

[SOURCE: IEC 60500:2017, 3.23, modified – In the definition, "ratio of the root-mean-square output voltage" has been replaced by "quotient of the Fourier transform of the **hydrophone** open-circuit output voltage **signal** $\mathfrak{Z}(U_H(t))$ ", and "root-mean-square of the sound pressure" has been replaced by "Fourier transform of the sound pressure $\mathfrak{Z}(p(t))$ ". The description of the **hydrophone** active element has been moved to a Note to entry.]

**3.7
pressure sensitivity level**

L_M

twenty times the logarithm to the base 10 of the ratio of the modulus of the **pressure sensitivity** $|M_p|$ to a reference sensitivity of M_{ref} , in decibels

$$L_M = 20 \log_{10} \frac{|M_p|}{M_{ref}} \text{ dB} \tag{3}$$

Note 1 to entry: The value of reference sensitivity M_{ref} is 1 V/ μ Pa.

[SOURCE: IEC 60500:2017, 3.24, modified – In the definition, "modulus of the" has been added before "**pressure sensitivity**", and "in decibels" has been added after " M_{ref} ".]

3.8**projector**

electro-acoustic transducer that converts electric **signals** into sound **signals** propagating in water

[SOURCE: IEC 60565:2006 [1], 3.37]

3.9**ratio of specific heats**

γ

ratio of specific heats under constant pressure and under constant volume

Note 1 to entry: For dry air and temperature 0 °C to 17 °C, $\gamma = 1,40$.

3.10**reciprocal transducer**

linear, passive, and reversible electroacoustic transducer such that the coupling coefficients are equal for transduction in either direction

[SOURCE: IEC 60565:2006 [1], 3.24, modified – In the definition, "transducer" has been replaced by "electroacoustic transducer", and "such that the coupling coefficients are equal for transduction in either direction" has been added at the end of the definition.]

3.11**signal**

specified time-varying electric current, voltage, sound pressure, sound particle displacement, or other field quantity of interest

iTeh STANDARD PREVIEW
(standards.iteh.ai)

[SOURCE: ISO 18405:2017 [2], 3.1.5.8] IEC 60565-2:2019

<https://standards.iteh.ai/catalog/standards/sist/8b556783-bad4-4b70-8750-828600b57cab/iec-60565-2-2019>

3.12**transmitting response to current**

$S_{I,T}$

<of a transducer in a coupler> quotient of the Fourier transform of the acoustic pressure **signal** $\mathfrak{Z}(p(t))$ to the Fourier transform of the electrical current **signal** $\mathfrak{Z}(I(t))$ through a transducer T inserted into the **coupler** at a given frequency

$$S_{I,T} = \frac{\mathfrak{Z}(p(t))}{\mathfrak{Z}(I(t))} \quad (4)$$

Note 1 to entry: **Transmitting response to current** is expressed in units of pascal per ampere, Pa/A.

Note 2 to entry: Different with the free-field calibration, no distance term is required here.

Note 3 to entry: The acoustic pressure signal is assumed uniform in a **coupler**.

[SOURCE: IEC 60565:2006 [1], 3.36, modified – In the term, "small chamber transmitting response to current of a transducer" has been replaced by "**transmitting response to current**". The domain "<of a transducer in a coupler>" has been added. In the definition, "a small chamber" has been replaced by "a **coupler**", and "flowing through the electrical terminals of a transducer inside the chamber" by "through a transducer inserted into the **coupler**". Also, "current" has been replaced by "Fourier transform of the electrical current **signal** $\mathfrak{Z}(U_H(t))$ ", and "ratio of the acoustical pressure (assumed uniform)" has been replaced by "quotient of the Fourier transform of the acoustic pressure signal $\mathfrak{Z}(p(t))$ ".]

3.13 uncertainty

<of measurement> non-negative parameter characterizing the dispersion of the quantity values being attributed to a measurand, based on the information used

[SOURCE: ISO/IEC Guide 99:2007 [3], 2.26]

3.14 vibrating column

apparatus in which a column of water in a vertically placed cylindrical container is set in vibration, causing a depth-dependent sound pressure in the water column

Note 1 to entry: The length of the column is sufficiently small compared with the wavelength of the sound in the water. The cross-sectional dimension of the column is small compared with its length.

[SOURCE: IEC 60565:2006 [1], 3.38]

3.15 wavenumber

k

reciprocal of the acoustic wavelength multiplied by 2π

$$k = 2\pi / \lambda \quad (5)$$

Note 1 to entry: **Wavenumber** is expressed in units of per metre, m^{-1} .

Note 2 to entry: In different branches of physics, the term **wavenumber** can be considered equal to either $2\pi/\lambda$ or $1/\lambda$, but in the technical field of acoustics, $2\pi/\lambda$ is preferred. This term given in IEC 60050-103:2009, 103-10-12 is "angular **wavenumber**".

[SOURCE: IEC 60050-726:1982 [4], 726-05-02, modified – In the definition, "the reciprocal of the waveguide wavelength or the" and "for a plane wave" have been deleted, and "acoustic" and "multiplied by 2π " have been added before and after "wavelength", respectively.]

4 Symbols

C_t	acoustic compliance of chamber
C_M	compliance of the medium
c	speed of sound in water
c_f	speed of sound in a fluid
d	depth or distance of the hydrophone
d_{jk}	piezoelectric modulus of the shell material
E	Young's modulus
f	frequency
g	acceleration due to gravity
h	displacement of the water surface in the open vessel
H_e	equivalent height
ΔH	change of the water level
I_P	current through projector
I_T	current through transducer
I_C	compensation current through null projector
K	characteristic constant of piezoelectric null transducer

K_0	hydrostatic pressure correction factor
k	wavenumber
L	length of column or coupler
L_M	pressure sensitivity level of the hydrophone
M_H	sensitivity of the hydrophone
M_p	pressure sensitivity
M_T	sensitivity of the static pressure transducer
M_M	sensitivity of the microphone
p	sound pressure
p_s	static pressure
Q	mechanical quality factor
r	radius of transducer shell
S_P	transmitting response to current of a projector in a coupler
S_T	transmitting response to current of a transducer in a coupler
U_C	compensation voltage
U_H	open-circuit voltage at hydrophone
U_M	open-circuit voltage at microphone
U_{PH}	open-circuit voltage at hydrophone with a projector as sound source
U_{PT}	open-circuit voltage at transducer with a projector as sound source
U_{TH}	open-circuit voltage at hydrophone with a transducer as sound source
U_R	open-circuit voltage at a reference hydrophone
\underline{u}	volume velocity
V_b	volume of the subsidiary body
V_t	total volume
ΔV	volume change
x_0	vibration amplitude
Z	contains all the terms involving transfer impedance
\underline{Z}_{AI}	acoustic impedance
\underline{Z}_{PH}	electrical transfer impedance of projector and hydrophone in a coupler
\underline{Z}_{PT}	electrical transfer impedance of projector and transducer in a coupler
\underline{Z}_{TH}	electrical transfer impedance of transducer and hydrophone in a coupler
\underline{Z}_{TP}	electrical transfer impedance of transducer to projector in a coupler
γ	ratio of specific heats
ρ	density of water
ρ_f	density of fluid
σ	Poisson's modulus
ω	angular frequency
ω_r	resonance angular frequency

5 Procedures for calibration

5.1 Principles

a) Absolute calibration
