

SLOVENSKI STANDARD
SIST-TS IEC TS 61200-101:2024

01-marec-2024

Vodilo za električne inštalacije – 101. del: Smernice za uporabo enosmernih električnih inštalacij male napetosti, ki niso predvidene za priključitev na javno distribucijsko omrežje (IEC TS 61200-101:2018)

Electrical installation guide - Part 101: Application guidelines on extra-low-voltage direct current electrical installations not intended to be connected to a public distribution network (IEC TS 61200-101:2018)

CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	7
4 Concept of an electrical installation	8
5 DC supplies	9
6 Loads	9
6.1 Preferred nominal voltages	9
6.2 Minimum and maximum voltage values	10
7 Wiring systems	10
7.1 Type of wiring system	10
7.2 Identification of conductors and terminals	11
7.3 Cross-sectional areas of conductors	11
7.4 Selection of conductors.....	11
7.4.1 12 V nominal voltage	11
7.4.2 24 V nominal voltage	11
7.4.3 36 V nominal voltage	12
7.4.4 48 V nominal voltage	12
8 Protection against electric shock.....	13
8.1 General.....	13
8.2 Provision for basic protection.....	13
8.3 Provision for fault protection	13
8.4 Protection by safety extra-low voltage system (SELV system).....	13
9 Protection against overcurrent.....	13
10 Arcing.....	14
11 Example of a typical architecture	14
Annex A (informative) Voltage drop limits for extra-low-voltage installations	15
A.1 Voltage drop limits in consumers' installations	15
A.2 Estimation of voltage drop	15
Annex B (informative) Example of an installation for energy access using the SELV system as protective measure against electric shock.....	16
Bibliography.....	17
Figure 1 – Concept of a low voltage electrical installation	9
Figure 2 – Colour identification of conductors in DC circuits.....	11
Figure B.1 – Example of an installation for energy access using SELV system as protective measure against electric shock.....	16
Table 1 – Preferred voltages for equipment	10
Table 2 – Maximum length with respect to maximum voltage drop (12 V nominal voltage)	11
Table 3 – Maximum length with respect to maximum voltage drop (24 V nominal voltage)	12

Table 4 – Maximum length with respect to maximum voltage drop (36 V nominal voltage)	12
Table 5 – Maximum length with respect to maximum voltage drop (48 V nominal voltage)	12
Table A.1 – Maximum voltage drops	15

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTRICAL INSTALLATION GUIDE –

Part 101: Application guidelines on extra-low-voltage direct current electrical installations not intended to be connected to a public distribution network

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. In exceptional circumstances, a technical committee may propose the publication of a technical specification when

- the required support cannot be obtained for the publication of an International Standard, despite repeated efforts, or
- the subject is still under technical development or where, for any other reason, there is the future but no immediate possibility of an agreement on an International Standard.

Technical specifications are subject to review within three years of publication to decide whether they can be transformed into International Standards.

IEC TS 61200-101, which is a Technical Specification, has been prepared by IEC technical committee 64: Electrical installations and protection against electric shock.
