This European Standard was approved by CENELEC on 2013-03-18. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword

This document EN 50288-6-2:2013 has been prepared by CLC/SC 46XC "Multicore, Multipair and Quad Data communication cables," of CLC/TC 46X, "Communication cables".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2014-03-18
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2016-03-18

This document supersedes EN 50288-6-2:2003.

EN 50288-6-2:2013 includes the following significant technical changes with respect to EN 50288-6-2:2003:

- the addition of the Blank Detail Specification Annex;
- a number minor corrections and updating of references;
- the re-classification of 'ELFEXT' to 'ACR-F'.

This Part 6-2 is to be read in conjunction to EN 50288-1.

**iTeh STANDARD PREVIEW
(standards.iteh.ai)**
Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

SIST EN 50288-6-2:2013
This standard covers the Principle Elements of the Safety Objectives for Electrical Equipment
<https://standards.iteh.ai/catalog/standards/SISTEN641/d8-435b-4d08-babb-90c91e82184/sist-en-50288-6-2-2013>

1 Scope

EN 50288-6-2 is a sectional specification for unscreened cables, characterised from 1 MHz up to 250 MHz, to be used as work area cables to connect a telecommunications outlet to the terminal equipment and for patch cord cables to establish connections on a patch panel as defined in EN 50173.

Work area and data centres cables may also be used as patch cord cables in any distributor of a generic building wiring system to interconnect with equipment or to cross-connect between cabling systems.

This sectional specification contains the electrical, mechanical, transmission and environmental performance characteristics of the cables, when tested in accordance with the referenced test methods.

This sectional specification is to be read in conjunction with EN 50288-1, which contains the essential provisions for its application.

The cables covered in this sectional specification are intended to operate with voltages and currents normally encountered in communication systems. These cables are not intended to be used in conjunction with low impedance sources, for example, the electric power supplies of public utility mains.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

3 Terms, definitions, symbols and abbreviations

3.1 Terms and definitions

For the purposes of this document the terms and definitions given in EN 50288-1 apply.

3.2 Symbols and abbreviations

For the purposes of this document, the following abbreviations apply.

EX Exogenous (derived or originating externally)

POE Power Over Ethernet

4 Cable construction

4.1 Conductor

The conductor shall be solid or stranded copper and meet the requirements of EN 50288-1, 4.1

The stranded conductor shall consist of seven wires each with a nominal diameter of $\geq 0,10 \text{ mm}$ to $\leq 0,21 \text{ mm}$.

The conductor shall be plain or metal coated.

The solid conductor nominal diameter shall be $\geq 0,4 \text{ mm}$ to $\leq 0,8 \text{ mm}$.

NOTE Constructions with 'copper clad' conductors **do not** meet the requirements

4.2 Insulation

The insulation shall be of a suitable material according to the relevant part of EN 50290-2.

**iTeh STANDARD PREVIEW
(standards.iteh.ai)**

4.3 Cabling elements

The cable element shall be a pair or a quad.

<https://standards.iteh.ai/catalog/standards/sist/e464f8d8-433b-4d08-bd6b-90f91c82184/sist-en-50288-6-2-2013>

4.4 Identification of cabling elements

Unless otherwise specified, the colour coding for identification is given in IEC 60189-2. The colours shall meet the requirements of EN 50288-1, 4.4

4.5 Screening of cabling elements

Not applicable.

4.6 Cable make-up

The cable elements shall be laid up in concentric layer(s) or units to form the cable core.

4.7 Filling compound

Not applicable.

4.8 Interstitial fillers

Where fillers are used they shall meet the requirements of EN 50288-1, 4.8

4.9 Screening of the cable core

Not applicable.

4.10 Moisture barriers

Not applicable.

4.11 Wrapping layers

Where wrapping layers are used they shall be in accordance with EN 50288-1, 4.11.

4.12 Sheath

The sheath shall be of a suitable material according to the relevant part of EN 50290-2.

5 Tests and requirements for completed cables

The following tables give the tests to be applied, together with the respective limits, in order to demonstrate compliance with this specification.

5.1 Electrical tests

5.1.1 Low-frequency and d.c. electrical measurements

Table 1 - Low-frequency and d.c. electrical measurements

EN 50288-1 sub-clause	Parameter	Requirement
5.1.1.1	Conductor loop resistance	(D1) $\leq 28 \Omega/100 \text{ m}$ (D2) $\leq 34 \Omega/100 \text{ m}$
5.1.1.2	Conductor resistance unbalance	$\leq 2,0\%$ https://standards.iteh.ai/catalog/standards/sist-en-50288-6-2-2013
5.1.1.3	Dielectric strength conductor/conductor	1,0 kV d.c. or 0,7 kV a.c. for 1 min or 2,5 kV d.c. or 1,7 kV a.c. for 2 s
5.1.1.4	Insulation resistance	$\geq 5\,000 \text{ M}\Omega \text{ km}$ when tested in accordance with EN 50289-1-4
5.1.1.5	Mutual capacitance	No requirement specified
5.1.1.6	Capacitance unbalance to earth	$\leq 1\,200 \text{ pF/km}$

5.1.2 High-frequency electrical and transmission measurements

Table 2 - High-frequency electrical and transmission requirements

EN 50288-1 sub-clause	Parameter	Requirement																								
5.1.2.1	Velocity of propagation	Phase delay $\leq 534+36/\sqrt{f}$ ns/100 m, $1 \text{ MHz} \leq f \leq 250 \text{ MHz}$																								
5.1.2.2	Propagation delay difference (skew)	$\leq 45 \text{ ns}/100 \text{ m}$ at 100 MHz
