To be completed

This draft European Standard is submitted to CENELEC members for CENELEC enquiry.  
Deadline for CENELEC: 2014-08-22.

It has been drawn up by CLC/SC 9XC.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

## Foreword

This document (prEN 50526-3:2014) has been prepared by SC 9XC, '*Electric supply and earthing systems for public transport equipment and ancillary apparatus (Fixed installations)*' of Technical Committee CENELEC TC 9X, '*Electrical and electronic applications for railways*'.

This document is currently submitted to the Enquiry.

iTeh STANDARD PREVIEW  
(standards.iteh.ai)

SIST EN 50526-3:2016

<https://standards.iteh.ai/catalog/standards/sist/17e9af89-8b95-4bc5-9dea-d97b93181e90/sist-en-50526-3-2016>

## Introduction

This European Standard is in three parts.

Part 1 deals with metal oxide arresters without gaps for d.c. railway traction systems (fixed installations) and is based on EN 60099-4.

Part 2 deals with voltage limiting devices for specific use in d.c. railway traction systems (fixed installations).

Part 3 is a Guide of application of metal-oxide arresters and of voltage limiting devices.

**iTeh STANDARD PREVIEW**  
**(standards.iteh.ai)**

[SIST EN 50526-3:2016](https://standards.iteh.ai/catalog/standards/sist/17e9af89-8b95-4bc5-9dea-d97b93181e90/sist-en-50526-3-2016)

<https://standards.iteh.ai/catalog/standards/sist/17e9af89-8b95-4bc5-9dea-d97b93181e90/sist-en-50526-3-2016>

**prEN 50526-3:2014 (E)****1 Scope**

This Application Guide supports the European Standards EN 50526-1 and EN 50526-2.

Guidance is offered on the following subjects.

- The selection and installation of surge arresters
- The selection and installation of voltage limiting devices as VLD-O and VLD-F.
- The arrangement of the surge arresters and VLDs

Because of differences in the established, proven methods, electric traction systems of nominal voltage 600 V – 750 V are treated separately from the systems at higher nominal voltages.

This application guide does not treat systems different from the d.c. electrified traction systems

**2 Normative references**

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

### 3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

#### 3.1

##### **nominal voltage**

$U_n$

designated value for a system

[SOURCE: EN 50163:2004,3.3]

#### 3.2

##### **highest permanent voltage**

$U_{max1}$

maximum value of the voltage likely to be present indefinitely

[SOURCE: EN 50163:2004,3.4]

#### 3.3

##### **highest non-permanent voltage**

$U_{max2}$

maximum value of the voltage likely to be present for a limited period of time

Adapted from EN 50163:2004, 3.5

#### 3.4

##### **rated insulation voltage**

$U_{Nm}$

d.c withstand voltage value assigned by the manufacturer to the equipment or a part of it, characterising the specified permanent (over five minutes) withstand capability of its insulation

[SOURCE: EN 50526-1:2012, 3.4]

#### 3.5

##### **rated impulse withstand voltage**

$U_{Ni}$

impulse voltage value assigned by the manufacturer to the equipment or a part of it, characterising the specified withstand capability of its insulation against transient overvoltages

[SOURCE: EN 50526-1:2012, 3.5]

#### 3.6

##### **overvoltage**

voltage having a peak value exceeding the corresponding peak value of the highest non-permanent voltage  $U_{max2}$

[SOURCE: EN 50526-1:2012, 3.6]

#### 3.7

##### **transient overvoltage**

short duration overvoltage of a few (up to 20 ms) milliseconds or less associated with a transient regime. Two particular transient overvoltages are defined: switching overvoltage and lightning overvoltage

[SOURCE: EN 50526-1:2012, 3.7]

**prEN 50526-3:2014 (E)****3.8****switching overvoltage** $U_{so}$ 

transient overvoltage at any point of the system due to specific switching operation or fault

[SOURCE: EN 50526-1:2012, 3.8]

**3.9****lightning overvoltage**

transient overvoltage at any point of the system due to a lightning discharge

[SOURCE: EN 50124-1:2001, 1.3.3.2.2]

**3.10****surge arrester**

device intended to limit the transient overvoltages to a specified level

[SOURCE: EN 50526-1:2012, 3.10]

**3.11****metal-oxide surge arrester**

arrester having non-linear metal-oxide resistors connected in series and/or in parallel without any integrated series or parallel spark gaps

[SOURCE: EN 50526-1:2012, 3.11]

**3.12****continuous operating voltage of an arrester** $U_c$ 

designated permissible d.c. voltage value that may be applied continuously between the arrester terminals

[SOURCE: EN 50526-1:2012, 3.12]

**3.13****rated voltage of an arrester** $U_r$ 

voltage by which the arrester is designated

Note 1 to entry: Because of the particular nature of the d.c. electrical installation dealt with, the rated voltage of a d.c. arrester coincides with the continuous operating voltage.

[SOURCE: EN 50526-1:2012, 3.13]

**3.14****lightning impulse protection level** $U_{pl}$ 

the maximum residual voltage for the nominal discharge current;

[SOURCE: EN 50526-1:2012, 3.15]

**3.15****switching impulse protection level** $U_{ps}$ 

maximum residual voltage at the specified switching impulse current

[SOURCE: EN 50526-1:2012, 3.16]

**3.16****charge transfer capability** $Q_T$ 

maximum charge per impulse that can be transferred during the charge transfer test and during the operating duty test

[SOURCE: EN 50526-1:2012, 3.17]

**3.17****discharge current of an arrester**

impulse current which flows through the arrester

[SOURCE: EN 50526-1:2012, 3.18]

**3.18****nominal discharge current of an arrester** $I_n$ 

peak value of lightning current impulse which is used to classify an arrester

[SOURCE: EN 50526-1:2012, 3.19]

**3.19****high current impulse of an arrester**

peak value of discharge current having a 4/10  $\mu$ s impulse shape which is used to test the stability of the arrester on direct lightning strokes

[SOURCE: EN 50526-1:2012, 3.20]

**3.20****steep current impulse**

current impulse with a virtual front time of 1  $\mu$ s with limits in the adjustment of equipment such that the measured values are from 0,9  $\mu$ s to 1,1  $\mu$ s and the virtual time to half-value on the tail is not longer than 20  $\mu$ s

[SOURCE: EN 50526-1:2012, 3.21]

**3.21****lightning current impulse**

8/20  $\mu$ s current impulse with limits on the adjustment of equipment such that the measured values are from 7  $\mu$ s to 9  $\mu$ s for the virtual front time and from 18  $\mu$ s to 22  $\mu$ s for the time to half-value on the tail

[SOURCE: EN 50526-1:2012, 3.22]

**3.22****direct lightning current impulse**

impulse defined by the charge  $Q$  and the peak value of the current impulse  $I_{imp}$

[SOURCE: EN 50526-1:2012, 3.23]

**3.23****switching current impulse of an arrester** $I_{sw}$ 

peak value of discharge current having a virtual front time greater than 30  $\mu$ s but less than 100  $\mu$ s and a virtual time to half value on the tail of roughly twice the virtual front time

[SOURCE: EN 50526-1:2012, 3.24]

**prEN 50526-3:2014 (E)****3.24****porcelain-housed arrester**

arrester using porcelain as housing material, with fittings and sealing systems

[SOURCE: EN 50526-1:2012, 3.30]

**3.25****polymer-housed arrester**

arrester using polymeric and/or composite materials for housing

[SOURCE: EN 50526-1:2012, 3.31]

**3.26****flashover**

disruptive discharge over a solid surface

[SOURCE: EN 50526-1:2012, 3.44]

**3.27****impulse**

unidirectional wave of voltage or current which without appreciable oscillations rises rapidly to a maximum value and falls – usually less rapidly – to zero with small, if any, excursions of opposite polarity

Note 1 to entry: The parameters which define a voltage or current impulse are polarity, peak value, front time and time to half value on the tail.

[SOURCE: EN 50526-1:2012, 3.45]

**3.28****voltage-limiting device****VLD**

protective device whose function is to prevent existence of an impermissible high touch voltage

[SOURCE: EN 50122-1:2011, 3.1.20]

**3.29****recoverable VLD**

VLD that recovers after triggering

[SOURCE: prEN 50526-2 201X, 3.2]

**3.30****non-recoverable VLD**

VLD remaining in its low resistance state permanently after triggering

[SOURCE: prEN 50526-2:201X, 3.3]

**3.31****Welding-shut spark gap****voltage fuse**

VLD which triggers by electrical discharge across a gap causing a permanent short-circuit by melting of metallic parts

[SOURCE: prEN 50526-2:201X, 3.4]

**3.32****rated current** $I_r$ 

maximum value of the direct current that may flow permanently through the VLD in specified environmental conditions

[SOURCE: prEN 50526-2:201X, 3.5]

**3.33****short time withstand current** $I_w$ 

current that a VLD can carry in closed status, during a specified short time under prescribed conditions of use and behaviour

[SOURCE: prEN 50526-2:201X, 3.6]

**3.34****breaking capacity**

maximum current that a recoverable VLD can interrupt at a stated voltage

[SOURCE: IEC 60050441:1984, 17-08]

**3.35****residual voltage** $U_{res}$ 

a) peak value of voltage that appears between the terminals of an arrester during the passage of discharge current

b) value of voltage that appears between the terminals of the VLD during the passage of a specified current

[SOURCE: EN 50526-1:2012, 3.27] and [SOURCE: prEN 50526-2:201X, 3.17]

**3.36****structure earth**

construction made of metallic parts or construction including interconnected metallic structural parts, which can be used as an earth electrode

[SOURCE: EN 50122-1:2011, 3.2.4]

**3.37****open connection**

connection of conductive parts to the return circuit by a voltage-limiting device which makes a conductive connection either temporarily or permanently if the limited value of the voltage is exceeded

[SOURCE: EN 50122-1:2011, 3.2.12]

**3.38****return circuit**

all conductors which form the intended path for the traction return current

EXAMPLE Conductors may be:

– running rails,

**prEN 50526-3:2014 (E)**

- return conductor rails,
- return conductors,
- return cables.

[SOURCE: EN 50122-1:2011, 3.3.1]

**3.39****rail potential** $U_{RE}$ 

voltage occurring between running rails and earth

[SOURCE: EN 50122-1:2011, 3.3.7]

**3.40****(traction) substation**

installation to supply a contact line system and at which the voltage of a primary supply system, and in certain cases the frequency, is transformed to the voltage and the frequency of the contact line

[SOURCE: EN 50122-1:2011, 3.4.2]

**3.41****(traction) switching station**

installation from which electrical energy can be distributed to different feeding sections or from which different feeding sections can be switched on and off or can be interconnected

[SOURCE: EN 50122-1:2011, 3.4.3]

**3.42****Normal operation**

operation without fault condition on the line

Note 1 to entry: In this standard normal operation includes also degraded mode (loss of one or several substations)

**3.43****fault (or fault condition)**

non intended condition caused by short-circuit. The time duration is terminated by the correct function of the protection devices and circuit breakers

Note 1 to entry: For the relevant fault duration the correct operation of protection devices and circuit breakers is taken into account.

Adapted from EN 50122-1:2011, 3.4.5

**3.44****internal overvoltage**

an overvoltage in the system resulting from switching or from a fault in the system itself

[SOURCE: IEC 60050-604:1987, 03-31]

**3.45****short-circuit**

accidental or intentional conductive path between two or more conductive parts forcing the electric potential differences between these conductive parts to be equal to or close to zero

[SOURCE: IEC 60050-195:1998,04-11]

**3.46****stray current**

part of the current caused by a d.c.-traction system which follows paths other than the return circuit

Adapted from EN 50122-1:2011, 3.6.3

**3.47****overhead contact line**

OCL

contact line placed above (or beside) the upper limit of the vehicle gauge and supplying vehicles with electric energy through roof-mounted current collection equipment

[SOURCE: IEC 60050-811:1991, 33-02]

**3.48****conductor rail**

contact line made of a rigid metallic section or rail, mounted on insulators located near the running rails

[SOURCE: EN 50119:2009, 3.1.7]

**3.49****overhead contact line zone**

OCLZ

zone whose limits are in general not exceeded by a broken overhead contact line

[SOURCE: EN 50122-1:2011, 3.5.9]

**3.50****current collector zone**

CCZ

zone whose limits are in general not exceeded by an energized collector no longer in contact with the contact line or broken collector and its fragments

[SOURCE: EN 50122-1:2011, 3.5.10]

## 4 General considerations

### 4.1 General

Surge arresters are intended to protect power equipment from the lightning overvoltages. A surge arrester can be used also in order to protect electronic equipment against high transient voltages in the circuits to which the equipment is connected. See EN 50526-1 for the product specification.

VLDs are intended to protect persons from impermissible touch voltages between conductive parts caused by train operating currents or faults. When selecting a VLD, it should be considered whether the required function is VLD-F, or VLD-O or both as described in EN 50122-1. This is a question for the system design. See prEN 50526-2 for the product specification.
