### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

### A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

### A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

#### Recherche de publications IEC -

[webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

#### Service Clients - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: [sales@iec.ch](mailto:sales@iec.ch).

IEC Products & Services Portal - [products.iec.ch](http://products.iec.ch)

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 300 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 19 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## FIBRE OPTIC SENSORS –

**Part 3-2: Acoustic sensing and vibration measurement –  
Distributed sensing**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61757-3-2 has been prepared by subcommittee SC 86C: Fibre optic systems and active devices, of IEC technical committee TC 86: Fibre optics. It is an International Standard.

The text of this International Standard is based on the following documents:

Draft	Report on voting
86C/1700/CDV	86C/1719/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at [www.iec.ch/members\\_experts/refdocs](http://www.iec.ch/members_experts/refdocs). The main document types developed by IEC are described in greater detail at [www.iec.ch/standardsdev/publications](http://www.iec.ch/standardsdev/publications).

A list of all parts in the IEC 61757 series, published under the general title *Fibre optic sensors*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under [webstore.iec.ch](http://webstore.iec.ch) in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This document is based on SEAFOM Measuring Sensor Performance Document – 02 (SEAFOM MSP-02) [1]<sup>1</sup>. Within the framework of a type C liaison, SEAFOM proposed this document as a new work item, which was approved by the participating members of IEC SC 86C.

NOTE Except for Figure 1, Figure C.1, Figure C.2, and Figure C.3, all figures in this document were adopted from SEAFOM MSP-02 either in original or in modified form with permission from SEAFOM.

The IEC 61757 series is published with the following logic: the sub-parts are numbered as IEC 61757-M-T, where M denotes the measure and T, the technology.

## FIBRE OPTIC SENSORS –

### Part 3-2: Acoustic sensing and vibration measurement – Distributed sensing

#### 1 Scope

This part of IEC 61757 specifies the terminology, characteristic performance parameters, related test and calculation methods, as well as specific test equipment for interrogation units used in distributed fibre optic acoustic sensing and vibration measurement systems. This document refers to the Rayleigh backscatter and phase detection method by phase-sensitive coherent optical time-domain reflectometry ( $\phi$ -OTDR) only. Quasi-static and low frequency operation modes are not covered by this document.

Generic specifications for fibre optic sensors are defined in IEC 61757.

#### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61757:2018, *Fibre optic sensors – Generic specification*

IEC 61757-2-2:2016, *Fibre optic sensors – Part 2-2: Temperature measurement – Distributed sensing*

<https://standards.iteh.ai/catalog/standards/sist/309863ef-facd-4d15-a043-b09cd51b1b6d/iec-61757-3-2-2022>

#### 3 Terms, definitions, abbreviated terms and symbols

##### 3.1 Terms and definitions

For the purposes of this document, terms and definitions given in IEC 61757, IEC 61757-2-2:2016 and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

##### 3.1.1

##### **distributed fibre optic sensor**

fibre optic sensor that provides a spatially resolved measurement of a measurand over an extended region by means of a continuous sensing element

[SOURCE: IEC 61757:2018, 3.5]

### 3.1.2

#### distributed fibre optic acoustic sensing system

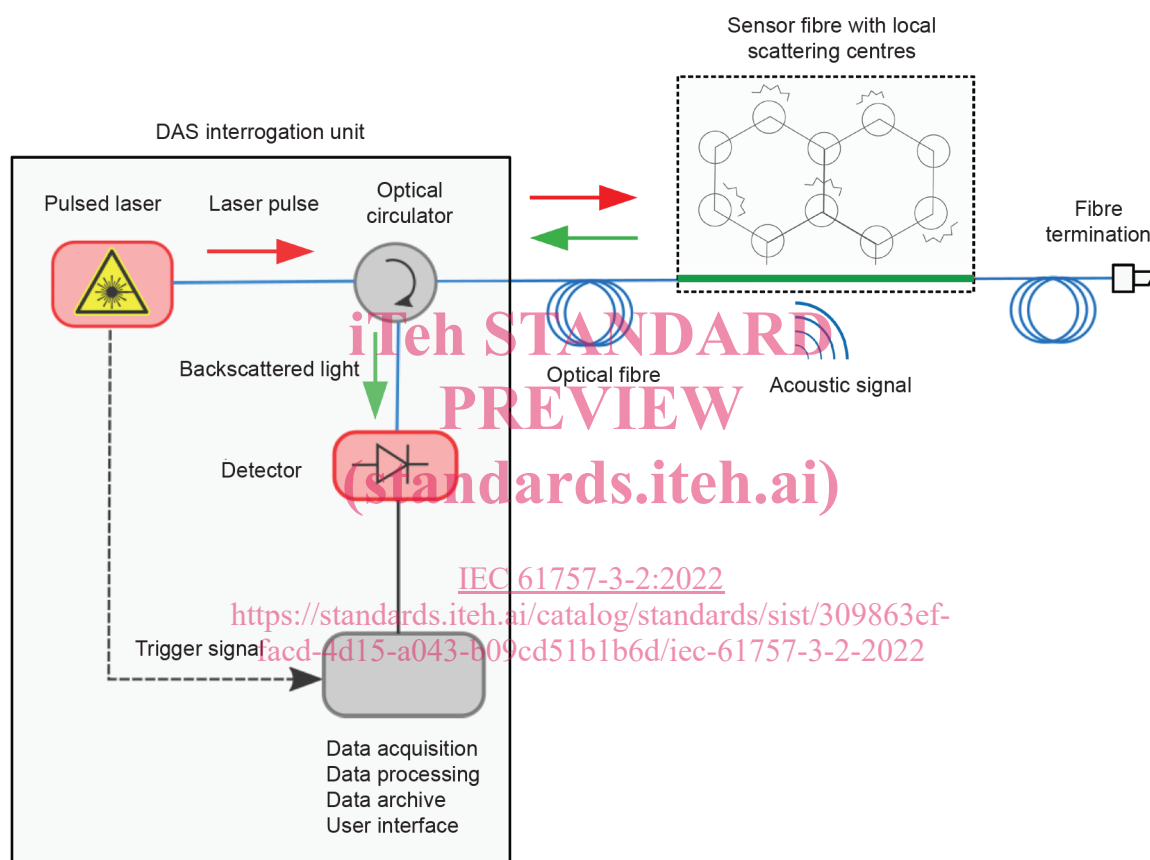

##### DAS

measurement set-up consisting of a distributed fibre optic sensor connected to an interrogation unit including processor, data archive, and user interface, which can locally detect acoustic or vibration induced disturbances (phase change of the backscattering centres) in the fibre

Note 1 to entry: The alternative term fibre optic distributed vibration sensing (DVS) is also used in the industry.

Note 2 to entry: See Figure 1 for a principal DAS set-up. Pulses from a coherent source are sent into the sensor fibre through an optical circulator, which also taps the coherent Rayleigh backscattering signal to a detector for subsequent digitization and fast real-time acquisition.

Note 3 to entry: Typically, a DAS detects acoustic or vibration induced disturbances at frequencies below 2 kHz.

IEC

Figure 1 – Distributed acoustic sensing system

### 3.1.3

#### distance measurement range

maximum distance (specified in length units) from the interrogation unit output connector along the simulated fibre sensor within which the DAS measures an acoustic signal with specified measurement performance under defined conditions

[SOURCE: IEC 61757-2-2:2016, 3.2, modified – adapted to acoustic sensing.]

### 3.1.4

#### fibre stretcher

device where an external stimulus causes a linearly proportional amount of fibre strain uniformly across the fibre length attached

Note 1 to entry: Normally the fibre stretcher consists of a piezoelectric cylinder with an electrical stimulus.

### 3.1.5

#### **interrogation unit**

##### **IU**

opto-electronic instrument that is connected to the distributed fibre optic sensor and measures and records dynamic strain along the fibre

Note 1 to entry: The processor, data archive, and user interface could be combined within the IU or could be a separate unit connected to the IU. The IU provides processing functions (standardized or customized), data archiving (usually standardized), and provides an interface to control and "set" the interrogation unit, select processing options, and define and implement the data collection options (triggered, timed, or other).

### 3.1.6

#### **location**

optical distance (expressed in length units) from the interrogation unit output connector to a desired sample point in the simulated fibre sensor

[SOURCE: IEC 61757-2-2:2016, 3.7, modified – adapted to simulated fibre sensor.]

### 3.1.7

#### **measurement time**

time between independent acoustic signal measurements when making successive measurements along the simulated fibre sensor

Note 1 to entry: Equivalently, it is the time interval between successive trace timestamps under these conditions (see Figure 2).

Note 2 to entry: The interrogation rate (specified in Hz) is equivalent to the pulse rate for interrogation units that provide optical pulse interrogation. It is equal to the inverse of the measurement time (see Figure 2).

[SOURCE: IEC 61757-2-2:2016, 3.8, modified – adapted to acoustic sensing.]

### 3.1.8

#### **Nyquist frequency**

frequency represented by the time duration or period of half of the interrogation or sample rate, whichever is smaller

EXAMPLE For an interrogation rate of 20 kHz (20 000 samples per second), the Nyquist frequency is 10 kHz.

### 3.1.9

#### **power spectrum density**

##### **PSD**

square root of the power spectral density derived from time series data converted to the frequency domain data

### 3.1.10

#### **sample number**

sequence number of a sample in a time series

### 3.1.11

#### **sample rate**

rate at which raw acoustic data is output from the interrogation unit

Note 1 to entry: The maximum sample rate is equal to the interrogation rate. Sample rate applies when the interrogation rate is reduced (by decimation or otherwise) prior to being output by the interrogation unit.

### 3.1.12

#### **sample point number**

successively numbered spatial sample point that increases along the length of the sensor

Note 1 to entry: The first spatial sampling point starts at zero.

**3.1.13****spatial resolution**

mean value of the spatial sample intervals which are within the range of the increasing and/or decreasing slope of a step response generated by a locally abrupt change of the stimulus signal, expressed in length units

Note 1 to entry: The manufacturer of the interrogation unit designs and/or implements by hardware and/or software the spatial resolution, which may be controlled by the user.

Note 2 to entry: Figure 19 shows the graphical plotting approach used to determine spatial resolution.

**3.1.14****spatial sample spacing**

distance (expressed in length units) between two consecutive sample points in a single acoustic signal

[SOURCE: IEC 61757-2-2:2016, 3.11, modified – adapted to acoustic sensing.]

**3.1.15****spatial sample point****SSP**

one of the points along the simulated fibre sensor that are defined through the interrogation unit configuration or set-up and represented spatially along the fibre as uniformly spaced points from which the interrogation unit samples the backscattered light

**3.1.16****strain sensitivity**
 $\varepsilon_{\text{sens}}$ 

noise floor of the DAS defined as a strain:

$$\varepsilon_{\text{sens}} = \frac{\lambda d\phi}{4\pi n G \xi} \quad (1)$$

<https://standards.iteh.ai/catalog/standards/sist/309863ef-facd-4d15-a043-b09cd51b1b6d/iec-61757-3-2-2022>

where

$\lambda$  is the operational optical (vacuum) wavelength of the DAS;

$n$  is the refractive index of the sensing fibre (group index);

$G$  is the spatial resolution employed by the DAS;

$\xi$  is the photo-elastic scaling factor for longitudinal strain in isotropic material (= 0,78);

$d\phi$  is the noise floor of the system in radians.

**3.1.17****time series**

data set for a particular sample point, which is represented as sampled at the interrogation rate

Note 1 to entry: Time series can also be represented at a sub-sample rate of the interrogation rate. Whichever rate is used, it shall be used for all tests described in this document.

Note 2 to entry: Figure 2 illustrates the signal parameters relating to time series and their spatial point identification.

**3.2 Abbreviated terms**

CL	crosstalk level
DAS	distributed fibre optic acoustic sensing system
FBG	fibre Bragg grating
FFT	fast Fourier transform
IU	interrogation unit

$THD_{FT}$	total harmonic distortion
$\mu\epsilon$	technical unit for linear strain with a ratio of increase in length $\Delta l$ to the length $l_0$ in the order of $10^{-6}$

#### 4 Performance parameters of a distributed acoustic sensing system

The technical performance of a DAS shall be characterized by the following performance parameters. Clause 6 describes the related test procedures to determine the parameters:

- dynamic range (see 6.2);
- frequency response (see 6.3);
- fidelity [optional] (see 6.4);
- self-noise (see 6.5);
- spatial resolution (see 6.6);
- crosstalk (see 6.7);
- loss budget (see 6.8);
- sensor reflection robustness (see 6.9).

#### 5 Test apparatus for performance parameter determination

##### 5.1 Simulated fibre sensor (SFS)

Each of the performance parameters shall be evaluated using a simulated fibre sensor (SFS) of an appropriate total fibre length ( $L_{F,tot}$ ) connected to each item of IU equipment under test.

The SFS shall be arranged as shown in Figure 3. It functionally shall comprise four delay coils and three fibre stretchers that are spliced together to represent a contiguous length which is  $L_{F,tot}$ . In this depiction, they are all shown with optical fibre pigtails that are angle terminated with a connector type of choice at the start and end of  $L_{F,tot}$ . The end of  $L_{F,tot}$  should have a return loss of  $> 50$  dB.

All elements of the SFS shall be housed in an isolated chamber that provides immunity to acoustics and vibration (see 5.5).

Each of the three fibre stretchers consists of a fibre of length  $L_s$ . The fibre stretchers are located between the four delay coils and represent locations for many of the performance parameter tests. These are identified by  $TP_1$ ,  $TP_2$ , and  $TP_3$ .

The lengths of delay coils 1 to 4 shall be determined by using the following relationships:

- the lengths of delay coils 1 and 4 are set to be equal to 250 m;
- the lengths of delay coils 2 and 3 are set to be equal to  $L_{F,tot}' / 2$ ,

where

$$L_{F,tot}' = L_{F,tot} - 500 \text{ m} - 3 L_s;$$

$L_{F,tot}$  is the total fibre length;

$L_s$  is the fibre stretcher length.
