This European Standard was approved by CENELEC on 2014-07-21. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

**(standards.iteh.ai)**

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

SIST EN 50514:2014  
<https://standards.iteh.ai/catalog/standards/sist/b2650eee-9029-4cb7-bebf-a415c2176817/sist-en-50514-2014>

## Foreword

This document (EN 50514:2014) has been prepared by CLC/TC 108X, Safety of electronic equipment within the fields of audio/video, information technology and communication technology.

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2015-07-21
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2017-07-21

This document supersedes EN 50514:2008.

In comparison with EN 50514:2008, the technical change in this document is the addition of requirements for equipment operating on a d.c. mains.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

## EU STANDARD PREVIEW

### (standards.iteh.ai)

This European Standard applies to equipment that complies with EN 60065 or EN 60950-1. Most of the tests specified in those standards are TYPE TESTS. For ROUTINE TESTS, to be carried out during or after manufacture, TYPE TESTS may not be suitable. Nevertheless, it is recognized that some tests are necessary in order to guarantee an acceptable level of safety.

This European Standard defines ROUTINE TESTS to measure the resistance of the earthing path and to check the insulation between the PRIMARY CIRCUIT and accessible conductive parts. In addition, this European Standard defines the documentation to be maintained by the manufacturer in respect of these tests.

This standard is complementary to the product safety standards (EN 60065 or EN 60950-1) and is to be considered only as a tool for voluntary application by manufacturers.

This European Standard can be used in association with Permanent Document CIG 021, *Factory inspection procedures - Harmonised requirements*, of the European Electrical Products Certification Association.

Permanent Document CIG 021 can be obtained from signatory bodies (certification bodies).

In this European Standard, the following print types are used:

- normative text: roman type;
- *test specifications*: italic type;
- terms which are defined in EN 60065 or EN 60950-1: SMALL CAPITALS.

## 1 Scope

This European Standard defines routine test procedures for use during or after manufacturing of complete equipment, sub-assemblies or components, certified or declared as complying with EN 60065 or EN 60950-1 and powered by an a.c. or d.c. mains supply. It defines the ROUTINE ELECTRICAL SAFETY TEST and their procedures to be applied during or at the end of the manufacturing process of apparatus certified or declared as complying with EN 60065 or EN 60950-1.

The application of the tests detailed in this European Standard is design dependent and needs to be defined by the manufacturer.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 60065, *Audio, video and similar electronic apparatus - Safety requirements (IEC 60065)*

EN 60950-1, *Information technology equipment - Safety - Part 1: General requirements (IEC 60950-1)*

## 3 Terms and definitions

# STANDARD PREVIEW

## (standards.iteh.ai)

For the purposes of this document, the terms and definitions given in EN 60065 or EN 60950-1 and the following apply.

SIST EN 50514:2014

**3.1**

<https://standards.iteh.ai/catalog/standards/sist/b2650eee-9029-4cb7-bebf-a415c2176817/sist-en-50514-2014>

**routine electrical safety test**  
test to which each individual device is subjected during or at the end of manufacture, to detect manufacturing failures and unacceptable tolerances in manufacturing and materials

## 4 Conformance

In order to conform to this European Standard, equipment shall pass the tests of Clause 5 where applicable and the results of these tests shall be recorded according to Clause 6.

## 5 Routine tests

### 5.1 Resistance of protective earthing paths

For CLASS I apparatus, the continuity of the protective earthing connection shall be checked between the protective earth contact of the MAINS plug or appliance inlet, or the PROTECTIVE EARTHING TERMINAL in case of a PERMANENTLY CONNECTED APPARATUS, and

- the ACCESSIBLE conductive parts, including TERMINALS regarded as ACCESSIBLE, which shall be connected to the PROTECTIVE EARTHING TERMINAL, and
- the protective earth contact of the socket-outlets respectively, if provided to deliver power to other apparatus.

*The test current is 150 % of the rating of the overcurrent device protecting the PROTECTIVE BONDING CONDUCTOR, but not less than 10 A and not more than 25 A (a.c. or d.c.) and is applied for any duration between 1 s and 4 s. The source shall have a no-load voltage not exceeding 12 V.*

*The measured resistance shall not exceed 0,1 Ω.*

*It is permitted to include the power cord (if any) in the resistance measurement and, if the result exceeds 0,1 Ω, to subtract the resistance of the PROTECTIVE EARTHING CONDUCTOR of the power cord.*

Care should be taken that the contact resistance between the tip of the measuring probe and the conductive part under test does not influence the test result.

## 5.2 Electric strength test

*ROUTINE TESTS for electric strength shall be carried out between the PRIMARY CIRCUIT and ACCESSIBLE conductive parts. For ACCESSIBLE SECONDARY CIRCUITS, it is permitted to test separately, before final assembly, subassemblies and components, such as transformers, if the relevant insulation cannot be tested in the complete equipment, provided that the complete equipment complies with EN 60065 or EN 60950-1 as appropriate.*

*The insulation of the apparatus shall be checked by the following test.*

- For an apparatus supplied by an a.c. MAINS, an a.c. test voltage of substantially sine-wave form, having MAINS frequency, or a d.c. test voltage or a combination of both with a peak value as specified in Table 1 is applied.
- For an apparatus supplied by a d.c. mains, a d.c. voltage according to Table 2 is applied.

*The test voltage is applied between the supply TERMINALS connected in parallel and*

- TERMINALS regarded as ACCESSIBLE, and
- ACCESSIBLE conductive parts respectively.

*which may become HAZARDOUS LIVE in the event of an insulation fault as a result of incorrect assembly.*

<https://standards.iteh.ai/catalog/standards/sist/b2650eee-9029-4cb7-bebf>

TERMINALS regarded as ACCESSIBLE and ACCESSIBLE conductive parts may be connected together during the electric strength test.

**Table 1 — A.C. test voltage**

<b>Application of test voltage</b>	<b>Test voltage</b> [V (peak) a.c. or d.c.]
BASIC INSULATION	2 120 (1 500 r.m.s.)
DOUBLE OR REINFORCED INSULATION	3 540 (2 500 r.m.s.)

NOTE The test voltages given are the minimum test voltages to be applied. Higher voltages are allowed at the discretion of the manufacturer.

**Table 2 — D.C. test voltage**

<b>Application of test voltage</b>	<b>Test voltage</b> V d.c.	
	Up to and including 42,4 V peak or 60 V d.c.	Over 42,4 V peak or 60 V d.c. up to and including 10KV peak or d.c.
BASIC INSULATION	No test	see $V_a$ in Table 3
DOUBLE OR REINFORCED INSULATION	No test	see $V_b$ in Table 3

240	1 238	1 980	1 700	3 194	3 194			

NOTE Linear interpolation is permitted between the nearest two points.

<sup>a</sup> At these voltages, the values of *V<sub>b</sub>* are determined by the general curve  $V_b = 155,86 U^{0,4638}$  and are not 1,6 *V<sub>a</sub>*.

Before the test voltage is applied, intimate contact shall be made between the specimen and the connection devices.

Initially it is allowed to apply not more than half of the prescribed test voltage, then it is raised with a steepness not exceeding 1 560 V/ms to the full value which is held for 1 s to 4 s.
