#### **English Version**

#### Monitoring and alarm receiving centre

Centre de contrôle et de réception d'alarme

Alarmempfangsstelle

This draft European Standard is submitted to CENELEC members for enquiry. Deadline for CENELEC: 2016-05-20.

It has been drawn up by CLC/TC 79.

If this draft becomes a European Standard, CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CENELEC in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning: This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

SIST EN 50518:2019

https://standards.iteh.ai/catalog/standards/sist/9453e3d3-9529-48d3-b0cd-152756521170/sist-en-50518-2019

#### European foreword

This document (prEN 50518:2016) has been prepared by CLC/TC 79, "Alarm systems".

This document is currently submitted to the Enquiry.

The following dates are proposed:

•	latest date by which the existence of this document has to be announced at national level	(doa)	dor + 6 months
•	latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement	(dop)	dor + 12 months
•	latest date by which the national standards conflicting with this document have to be withdrawn	(dow)	dor + 36 months (to be confirmed or modified when voting)

This document will supersede EN 50518-1:2013, EN 50518-2:2013 and EN 50518-3:2013.

Annexes designated "normative" are part of the body of the standard. Annexes designated "informative" are given for information only. In this standard, Annex C is normative and Annexes A and B are informative.

iTeh STAND<u>ARD</u> PREVIEW (standards.iteh.ai)

https://standards.iteh.ai/catalog/standards/sist/9453e3d3-9529-48d3-b0cd

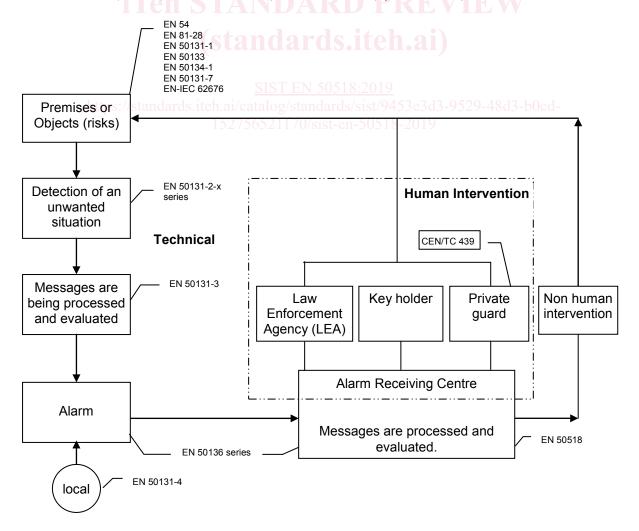

#### Introduction

This European Standard applies to all Monitoring and Alarm Receiving Centres (MARC's) that monitor and/or receive and/or process (alarm) messages that require an emergency response.

The abbreviation MARC describes the full functional scope of a Monitoring and Alarm Receiving centre. In all existing EN 50131 series accomplished under CLC/TC 79, Alarm systems, the abbreviation ARC is used. To avoid confusion and to achieve consistency in terminology the abbreviation ARC will be used throughout this standard, where MARC is equivalent for ARC. The function of receiving, processing and initiating response actions by (human) intervention for information provided by remote detection and observation systems in premises or objects is not limited to only those messages as generated by Intruder and Hold-up Alarm Systems (I&HAS). The whole series of standards under CLC/TC 79, Alarm systems, encompasses video surveillance systems (EN 62676), social alarm systems (EN 50134), access control systems (EN 50133) and audio and video door entry systems. All mentioned systems can send information, including alarms, to one or more remote locations for further processing, evaluation and (human) intervention.

All alarm information generated by other systems like for example fire detection and fire alarm systems, (vehicle) tracking and tracing systems, man guarding or telecommunication network supervision is regularly transmitted to one or more remote locations for further processing, evaluation and (human) intervention.

In all above circumstances criminal action, emergency situations and or calamities can jeopardize the safety and security of people and or properties. The central locations where the receiving, processing and initiation of (human) intervention take place should comply with the requirements of this standard.

It is noted that this European Standard cannot supersede any legislative requirements deemed necessary by a National Government to control the security sector on a national basis. This standard cannot interfere with all those items that are regulated by (inter)national regulations concerning external services (for example water, waste water, fuel supplies for gas and/or oil and mains power supplies).

## iTeh STANDARD PREVIEW (standards.iteh.ai)

SIST EN 50518:2019
https://standards.iteh.ai/catalog/standards/sist/9453e3d3-9529-48d3-b0cd-152756521170/sist-en-50518-2019

#### 1 Scope

This European Standard specifies the minimum requirements for monitoring, receiving and processing of alarm messages generated by alarm systems taking place as an integrated part of the total fire safety and security solution.

For the purpose of this standard, the term "alarm" is used in the broad sense to include fault, status and other messages received from one or more of a range of safety and security alarm systems such as but not limited to fire detection and fire alarm systems, fixed fire fighting systems, intrusion and hold-up alarm systems, access control systems, video surveillance systems, social alarms systems and combinations of such systems.

This standard gives requirements for two categories of ARC, category I and category II. A category I ARC will be designed, constructed and operated to a higher standard with respect to construction, security and integrity than a category II ARC.

The categorization is determined according to the type(s) of alarm messages handled.

Category I: ARCs handling messages from:

- I&HAS's:
- access control systems;
- VSS in security applications that require an emergency response (for example loss prevention);
- people monitoring and object tracking systems for security applications;
- alarm messages handled by category II ARCs;
- combinations of the above systems. SIST EN 50518:2019

Category II: ARC's handling messages from: 170/sist-en-50518-2019

- fixed firefighting systems;

fire alarm systems;

- social alarm systems;
- audio/video door entry systems;
- VSS in non-security applications (for example traffic flow);
- people monitoring and object tracking systems for non-security applications;
- elevator emergency systems;
- combinations of the above systems.

The requirements apply to ARC's (whether established in single or multiple sites) monitoring and processing alarms generated by systems installed at other locations and also to ARC's monitoring solely alarms from systems within their own site.

The standard includes functional and specific requirements supporting the services of an ARC.

The standard does NOT apply to

alarm systems used for non-civil purposes;

alarm systems for medical or health applications.

#### 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

#### 3 Terms, definitions and abbreviations

#### 3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

#### 3.1.1

#### alarm company

organisation which provides services for AS

[SOURCE: EN 50131-1:2006, 3.1.7, mod.]

#### 3.1.2

#### alarm condition

condition of an AS, or part thereof, which results from the response of the system to the presence of a hazard

[SOURCE: EN 50131-1:2006, 3.1.8, mod.]

#### 3.1.3

#### alarm management system (AMS)

system which stores, organises, controls, manages and allows retrieval of client data and is interfaced to alarm receiving equipment for automatic annunciation of messages for each alarm system

#### 3.1.4

#### alarm receiving centre (ARC)

continuously manned centre to which information concerning the status of one or more AS is reported

[SOURCE: EN 50136-1:2012, 4.1.2]

#### 3.1.5

#### alarm receiving centre operator (ARC operator)

person responsible for the handling of messages presented at the AE  $^{3-9529-48d3-b0cd}$ 

[SOURCE: CLC/TS 50136-4:2004, 3.3]

#### 3.1.6

#### alarm receiving centre shell (ARC shell)

all structural elements of the ARC perimeter (walls, entrance lobby, windows, glazed areas, floors, ceilings, entry and exit doors, entry and exits points of ventilation ducts, entry and exit points for other service cables and ducts, transfer hatches/chutes)

#### 3.1.7

#### alarm transmission equipment (ATE)

collective term to describe SPT, MCT (monitoring centre transceiver) and RCT

[SOURCE: EN 50136-1:2012, 4.1.4]

#### 3 1 2

#### alarm transmission system (ATS)

ATE and networks used to transfer information concerned with the state of one or more ASs to the AE of one more ARC's

Note 1 to entry: An ATS may consist of alarm transmission paths of different classes, for example for use in so called "dual path systems".

[SOURCE: EN 50136-1:2012, 4.1.8, mod.]

#### 3.1.9

#### alarm verification

process to provide information additional to the notified alarm which increases the probability that a genuine alarm has occurred

#### 3.1.10

#### annunciation equipment (AE)

equipment located at an ARC which displays the alarm status, or the changed alarm status of ASs in response to the receipt of incoming alarm messages

Note 1 to entry: The AE is not part of the ATS.

[SOURCE: EN 50136-1:2012, 4.1.12, mod.]

#### 3.1.11

#### client

individual or corporate body with whom the ARC has entered into a contract to provide alarm monitoring services

#### 3.1.12

#### detector

device designed to generate an alarm message in response to the sensing of an abnormal condition indicating the presence of a hazard

[SOURCE: CLC/TS 50131-7:2008, 3.1.12, mod.]

#### 3.1.13

#### disruptive event

any natural or man-made occurrence that may cause the discontinuation of orderly ARC activities according to standard operating procedures and requires the execution of special procedures

Note 1 to entry: such as (but not limited to):

- Failure of power supply;
- Failure of inbound communication systems;
- Failure of outbound communication systems;
- Failure of IT systems, loss of data;
- Fire;
- Extreme weather conditions, such as storm, flooding, lightning;
- Natural disasters such as earthquakes or landslides;
- Damage by vehicles from land and air;
- Hazardous gases and reduction of oxygen levels in the ambient air;
- Intrusion into premises, physical attack, including duress;
- Intrusion into IT and communication systems, virtual attack & cyber crime;
- Sabotage by people with access authorization (employees, business partners).

#### 3.1.14

#### entrance lobby

space between exterior and ARC that provides a controlled and secure entry/exit to the ARC

#### 3.1.15

#### expected message

message which has to reach the ARC according to predefined schedules (in particular status messages from alarm systems and communication systems)
