This European Standard was approved by CEN on 26 September 2005.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CEN member.

The STANDARD PREVIEW
(standardpreview)

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Central Secretariat has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

ITEH STANDARD PREVIEW
(standards.iteh.ai)

SIST EN 2267-005:2009

<https://standards.iteh.ai/catalog/standards/sist/a5ba2e5c-bf69-4a59-8224-0edf1c326d35/sist-en-2267-005-2009>

Foreword

This European Standard (EN 2267-005:2006) has been prepared by the European Association of Aerospace Manufacturers - Standardization (AECMA-STAN).

After enquiries and votes carried out in accordance with the rules of this Association, this Standard has received the approval of the National Associations and the Official Services of the member countries of AECMA, prior to its presentation to CEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2006, and conflicting national standards shall be withdrawn at the latest by December 2006.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

EN 2267-005:2006 (E)

1 Scope

This standard specifies the characteristics of UV laser printable electrical cables for use in the on-board electrical systems of aircraft at operating temperatures between – 55 °C and 260 °C.

It shall also be possible to mark these cables by hot stamp printing or ink jet printing. These markings shall be in accordance with EN 3838.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 2083, *Aerospace series — Copper or copper alloy conductors for electrical cables — Product standard*.

EN 2084, *Aerospace series — Cables, electric, single-core, general purpose, with conductors in copper or copper alloy — Technical specification*.

EN 2267-002, *Aerospace series — Cables, electrical, for general purpose — Operating temperatures between – 55 °C and 260 °C — Part 002: General*.

EN 3475-100*, *Aerospace series — Cables, electrical, aircraft use — Test methods — Part 100: General*.

iTeh STANDARD PREVIEW
EN 3838, *Aerospace series — Requirements and tests on user-applied markings on aircraft electrical cables.¹⁾*
(standards.iteh.ai)

EN 9133, *Aerospace series — Quality management systems — Qualification procedure for aerospace standard parts*.

3 Terms, definitions and symbols

For the purposes of this document, the terms, definitions and symbols given in EN 3475-100 apply.

4 Materials and construction

4.1 Materials

Conductor:

See EN 2267-002.

Insulation:

- for conductor sizes code 001 to 010:
 - first layer polyimide with total thickness (nominal value) of 30 µm, coated on both sides with a layer 2,5 µm thick of fluorocarbon;

* All parts quoted in this standard.

1) Published as AECMA Prestandard at the date of publication of this standard.

- direction of winding immaterial – overlap 51 % min.;
- second layer polytetrafluoroethylene (PTFE) 0,06 mm thick before use – running in opposite direction to first layer – overlap 65 % min.; or two layers of polytetrafluoroethylene (PTFE) 0,06 mm thick before use – running in opposite direction to first layer – one layer 51 % min. overlap and one layer in opposite direction 20 % min. overlap;
- for conductor sizes code 012 to 051:
 - first layer polyimide with total thickness (nominal value) of 30 µm, coated on both sides with a layer 2,5 µm thick of fluorocarbon;
 - direction of winding immaterial – overlap 51 % min.;
 - second layer polytetrafluoroethylene (PTFE) 0,06 mm thick before use – running in opposite direction to first layer – overlap 74 % min.; or two layers of polytetrafluoroethylene (PTFE) 0,06 mm thick before use – running in opposite direction to first layer – one layer 51 % min. overlap and one layer in opposite direction 47 % min. overlap.

A top coat may be applied.

It shall be possible to mark the external surface of the insulation by UV laser printing.

4.2 Construction

See EN 2083 and Table 1.
