**Abstract:** A definition of the requirements placed upon providers of a POSIX<sup>®</sup> Conformance Test Suite for the POSIX.2 standard (ISO/IEC 9945-2:1993, IEEE/ANSI Std. 1003.2-1992) is provided. These requirements consist of a list of assertions defining those aspects of POSIX.2 that are to be tested and the associated test methods that are to be used in performing those tests. This standard is primarily aimed at test suite providers but it also defines to POSIX.2 implementors those aspects of the standard that will be verified by a conformance test suite.

**Keywords:** conformance, POSIX, Shell and Utilities, test methods

## International Standard ISO/IEC 14515-2:2003(E)

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1. Draft International Standards adopted by the joint technical committee are circulated to national bodies for voting. Publication as an International Standard requires approval by at least 75 % of the national bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO/IEC 14515 may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14515-2 was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 22, *Programming languages, their environments and system software interfaces*.

ISO/IEC 14515 consists of the following parts, under the general title *Information technology — Portable Operating System Interface (POSIX®) — Test methods for measuring conformance to POSIX*:

— Part 1: *System interfaces*

[ISO/IEC 14515-2:2003](#)

— Part 2: *Shell and utilities*

<https://standards.iteh.ai/catalog/standards/sist/eceacab3-3cdb-4738-a8d6-ac8c62d1782d/iso-iec-14515-2-2003>

Annexes A, B and C form a normative part of this part of ISO/IEC 14515. Annex D is for information only.

**IEEE Standards** documents are developed within the IEEE Societies and the Standards Coordinating Committees of the IEEE Standards Association (IEEE-SA) Standards Board. The IEEE develops its standards through a consensus development process, approved by the American National Standards Institute, which brings together volunteers representing varied viewpoints and interests to achieve the final product. Volunteers are not necessarily members of the Institute and serve without compensation. While the IEEE administers the process and establishes rules to promote fairness in the consensus development process, the IEEE does not independently evaluate, test, or verify the accuracy of any of the information contained in its standards.

Use of an IEEE Standard is wholly voluntary. The IEEE disclaims liability for any personal injury, property or other damage, of any nature whatsoever, whether special, indirect, consequential, or compensatory, directly or indirectly resulting from the publication, use of, or reliance upon this, or any other IEEE Standard document.

The IEEE does not warrant or represent the accuracy or content of the material contained herein, and expressly disclaims any express or implied warranty, including any implied warranty of merchantability or fitness for a specific purpose, or that the use of the material contained herein is free from patent infringement. IEEE Standards documents are supplied **“AS IS.”**

The existence of an IEEE Standard does not imply that there are no other ways to produce, test, measure, purchase, market, or provide other goods and services related to the scope of the IEEE Standard. Furthermore, the viewpoint expressed at the time a standard is approved and issued is subject to change brought about through developments in the state of the art and comments received from users of the standard. Every IEEE Standard is subjected to review at least every five years for revision or reaffirmation. When a document is more than five years old and has not been reaffirmed, it is reasonable to conclude that its contents, although still of some value, do not wholly reflect the present state of the art. Users are cautioned to check to determine that they have the latest edition of any IEEE Standard.

In publishing and making this document available, the IEEE is not suggesting or rendering professional or other services for, or on behalf of, any person or entity. Nor is the IEEE undertaking to perform any duty owed by any other person or entity to another. Any person utilizing this, and any other IEEE Standards document, should rely upon the advice of a competent professional in determining the exercise of reasonable care in any given circumstances.

Interpretations: Occasionally questions may arise regarding the meaning of portions of standards as they relate to specific applications. When the need for interpretations is brought to the attention of IEEE, the Institute will initiate action to prepare appropriate responses. Since IEEE Standards represent a consensus of concerned interests, it is important to ensure that any interpretation has also received the concurrence of a balance of interests. For this reason, IEEE and the members of its societies and Standards Coordinating Committees are not able to provide an instant response to interpretation requests except in those cases where the matter has previously received formal consideration.

Comments for revision of IEEE Standards are welcome from any interested party, regardless of membership affiliation with IEEE. Suggestions for changes in documents should be in the form of a proposed change of text, together with appropriate supporting comments. Comments on standards and requests for interpretations should be addressed to:

Secretary, IEEE-SA Standards Board  
445 Hoes Lane  
P.O. Box 1331  
Piscataway, NJ 08855-1331  
USA

Note: Attention is called to the possibility that implementation of this standard may require use of subject matter covered by patent rights. By publication of this standard, no position is taken with respect to the existence or validity of any patent rights in connection therewith. The IEEE shall not be responsible for identifying patents for which a license may be required by an IEEE standard or for conducting inquiries into the legal validity or scope of those patents that are brought to its attention.

Authorization to photocopy portions of any individual standard for internal or personal use is granted by the Institute of Electrical and Electronics Engineers, Inc., provided that the appropriate fee is paid to Copyright Clearance Center. To arrange for payment of licensing fee, please contact Copyright Clearance Center, Customer Service, 222 Rosewood Drive, Danvers, MA 01923 USA; +1 978 750 8400. Permission to photocopy portions of any individual standard for educational classroom use can also be obtained through the Copyright Clearance Center.

# Introduction

(This introduction is not a normative part of IEEE Std 1003.2-1996, IEEE Standard for Information Technology — Test Methods for Measuring Conformance to POSIX® — Part 2: Shell and Utilities Interfaces, but is included for information only.)

The primary purpose of this standard is to define test methods for POSIX.2 {9}. It is intended for systems implementors and verification software developers. It is complementary to POSIX.2 {9} (second in a family of “POSIX” standards), which specifies a standard interface and environment for application programs that require the services of a “shell” command language interpreter and a set of common utility programs. (See 1.1 for a full description of the relationship between the standards.)

The majority of this standard describes the assertions that a test suite shall provide for the execution of a conformance test for the POSIX.2 {9} standard. The standard also describes the various other test methods that are to be used in the development or execution of such a test suite, and it describes the complimentary procedures that are needed to assess the results of the execution of the test suite. This standard should be read in conjunction with ISO/IEC 13210:1994 (ANSI/IEEE Std 1003.3-1991) Standard for Information Technology — Test Methods for Measuring Conformance to POSIX [11], which defines the general test method requirements applicable to POSIX Conformance Testing.

## Organization of This Standard

The standard is divided into nine parts:

- General, including a statement of scope, normative references, a description of test suite conformance requirements, and a description of the test methods specific to POSIX.2 {9} testing (Section 1).
- Assertions for definitions, general requirements, and the environment available to applications (Section 2).
- Assertions for the shell command language interpreter (Section 3).
- Assertions for the utilities in the required “Execution Environment Utilities” (Section 4).
- Assertions for the utilities in the optional “User Portability Utilities” (Section 5).
- Assertions for the utilities in the optional “Software Development Utilities” (Section 6).
- Assertions for the utilities in the optional “C Language Development Utilities” (Annex A).
- Assertions for C Language Bindings option (Annex B).
- Assertions for the utilities in the optional “FORTRAN Development and Runtime Utilities” (Annex C).

This introduction, any footnotes, notes accompanying the text, and the *informative* annexes are not considered part of the standard. Annexes A through C are normative and the other annexes are informative.

## Acknowledgments

We wish to thank the following organizations for donating significant computer, printing, and editing resources to the production of this standard: McCarron Advanced Computing Services, Inc., The POSIX Software Group, UniSoft Limited, and The Open Group.

Also we wish to thank the organizations employing the members of the working group and the balloting group for both covering the expenses related to attending and participating in meetings, and for donating the time required both in and out of meetings for this effort.

## Related Standards Activities

Activities to extend this standard to address additional requirements are in progress, and similar efforts can be anticipated in the future.

The following areas are under active consideration at this time or are expected to become active in the near future:<sup>1)</sup>

- (1) Language-independent service descriptions of POSIX.1 {8}
- (2) C, Ada, and FORTRAN language bindings to (1)
- (3) Verification testing methods
- (4) Realtime facilities
- (5) Secure/Trusted system considerations  
<https://standards.iteh.ai/catalog/standards/sist/eceacab3-3cdb-4738-a8d6-icc-14515-2-2003>
- (6) Network interface facilities
- (7) System administration
- (8) Graphical user interfaces
- (9) Profiles describing application- or user-specific combinations of open systems standards for: supercomputing, multiprocessor, and batch extensions; transaction processing; realtime systems; and multiuser systems based on historical models
- (10) An overall guide to POSIX-based or related open systems standards and profiles

Extensions are approved as “amendments” or “revisions” to this document, following IEEE and ISO/IEC procedures.

Approved amendments are published separately until the full document is reprinted and such amendments are incorporated in their proper positions.

---

1) A *Standards Status Report* that lists all current IEEE Computer Society standards projects is available from the IEEE Computer Society, 1730 Massachusetts Avenue NW, Washington, DC 20036-1903; Telephone: +1 202 371-0101; FAX: +1 202 728-9614.

If you have an interest in participating in the Portable Applications Standards Committee (PASC) working groups addressing these issues, please send your name, address, and phone number to the Secretary, IEEE Standards Board, Institute of Electrical and Electronics Engineers, Inc., P.O. Box 1331, 445 Hoes Lane, Piscataway, NJ 08855-1331, and ask to have this forwarded to the chair of the appropriate PASC working group. If you have an interest in participating in this work at the international level, contact your ISO/IEC national body.

IEEE Std 2003.2-1996 was prepared by the P2003.2 Working Group, sponsored by the Portable Applications Standards Committee of the IEEE Computer Society. At the time this standard was approved, the membership of the P2003.2 Working Group was as follows:

**Portable Applications Standards Committee (PASC)**

Chair:	Lowell Johnson
Vice Chair:	Charles Severance
Functional Chairs:	Jay Ashford Andrew Josey Barry Needham Stephe Walli
Secretary:	Nicholas Stoughton

**P2003.2 Working Group Officials**

Section 4: Execution Environment Utilities . . . . .	147
4.1 awk — Pattern scanning and processing language . . . . .	147
4.2 basename — return nondirectory portion of pathname . . . . .	203
4.3 bc — Arbitrary-precision arithmetic language . . . . .	207
4.4 cat — Concatenate and print files . . . . .	221
4.5 cd — Change working directory . . . . .	225

4.6	chgrp — Change file group ownership . . . . .	229
4.7	chmod — Change file modes . . . . .	234
4.8	chown — Change file ownership . . . . .	242
4.9	cksum — Display file checksums and block counts . . . . .	247
4.10	cmp — Compare two files . . . . .	251
4.11	comm — select or reject lines common to two files . . . . .	256
4.12	command — Execute a simple command . . . . .	262
4.13	cp — Copy files . . . . .	268
4.14	cut — Cut out selected fields of each line of a file . . . . .	281
4.15	date — Display the date and time . . . . .	287
4.16	dd — Convert and copy a file . . . . .	295
4.17	diff — Compare two files . . . . .	303
4.18	dirname — Return directory portion of pathname . . . . .	311
4.19	echo — Write arguments to standard output . . . . .	315
4.20	ed — Text editor . . . . .	317
4.21	env — Set environment for command execution . . . . .	375
4.22	expr — Evaluate arguments as an expression . . . . .	379
4.23	false — Return false value . . . . .	391
4.24	find — Find files . . . . .	393
4.25	fold — Filter for folding lines . . . . .	414
4.26	getconf — Get POSIX configuration values . . . . .	420
4.27	getopts — Parse utility options . . . . .	429
4.28	grep — File pattern searcher . . . . .	435
4.29	head — Copy the first part of files . . . . .	463
4.30	id — Return user identity . . . . .	467
4.31	join — Relational database operator . . . . .	474
4.32	kill — Terminate or signal processes . . . . .	484
4.33	ln — Link files . . . . .	488
4.34	locale — Get locale-specific information . . . . .	495
4.35	localedef — Get locale-specific information . . . . .	499
4.36	logger — Log messages . . . . .	508
4.37	logname — Return user's login name . . . . .	511
4.38	lp — Send files to a printer . . . . .	513
4.39	ls — List directory contents . . . . .	518
4.40	mailx — Interactive message processing system. . . . .	530
4.41	mkdir — Make directories . . . . .	598
4.42	mkfifo — Make FIFO special files . . . . .	605
4.43	mv — Move files . . . . .	612
4.44	nohup — Invoke a utility immune to hangups . . . . .	623
4.45	od — Dump files in various formats . . . . .	627
4.46	paste — Merge corresponding or subsequent lines of files . . . . .	636
4.47	pathchk — Check pathnames . . . . .	641
4.48	pax — Portable archive interchange . . . . .	646
4.49	pr — Print files . . . . .	672
4.50	printf — Write formatted output . . . . .	679
4.51	pwd — Return working directory name . . . . .	687
4.52	read — Read a line from standard input . . . . .	689
4.53	rm — Remove directory entries . . . . .	693
4.54	rmdir — Remove directories . . . . .	699
4.55	sed — Stream editor . . . . .	704
4.56	sh — Shell, the standard command language interpreter . . . . .	728
4.57	sleep — Suspend execution for an interval . . . . .	758

4.58	sort	— Sort, merge or sequence check text files	760
4.59	stty	— Set the options for a terminal	770
4.60	tail	— Copy the last part of a file	778
4.61	tee	— Duplicate standard input	785
4.62	test	— Condition evaluation utility	790
4.63	touch	— Change file access and modification times	798
4.64	tr	— Translate Characters	806
4.65	true	— Return true value	811
4.66	tty	— Return user's terminal name	813
4.67	umask	— Get or set file mode creation mask	816
4.68	uname	— Return system name	820
4.69	uniq	— Report or filter out repeated lines in a file	824
4.70	wait	— Await process completion	831
4.71	wc	— Word, line, and byte count	835
4.72	xargs	— Construct argument list(s) and execute utility	839
Section 5: User Portability Utilities Option			847
5.1	alias	— Define or display attributes	847
5.2	at	— Execute commands at a later time	851
5.3	batch	— Execute commands when the system load permits	861
5.4	bg	— Run jobs in background	864
5.5	crontab	— Schedule periodic background work	869
5.6	csplit	— Split files based on context	875
5.7	ctags	— Create a tags file	883
5.8	df	— Report free disk space	891
5.9	du	— Estimate file space usage	896
5.10	ex	— Text editor	901
5.11	expand	— Convert tabs to spaces	979
5.12	fc	— Process command history list	985
5.13	fg	— Run jobs in the foreground	992
5.14	file	— Determine file type	996
5.15	jobs	— Display status of jobs in the current session	1002
5.16	man	— Display system documentation	1008
5.17	mesg	— Permit or deny messages	1011
5.18	more	— Display files on a page-by-page basis	1015
5.19	newgrp	— Change to a new group	1044
5.20	nice	— Invoke utility with altered scheduling system priority	1048
5.21	nm	— Write the name list of an object file	1053
5.22	patch	— Apply changes to files	1062
5.23	ps	— Report process status	1071
5.24	renice	— Set system scheduling priorities of running processes	1079
5.25	split	— Split into pieces	1085
5.26	strings	— Find printable strings in files	1090
5.27	tabs	— Set terminal tabs	1094
5.28	talk	— Talk to another user	1098
5.29	time	— Time a simple command	1104
5.30	tput	— Change terminal characteristics	1108
5.31	unalias	— Remove alias definitions	1112
5.32	unexpand	— Convert spaces to tabs	1115
5.33	uudecode	— Decode a binary file	1121
5.34	uuencode	— Encode a binary file	1125

5.35	vi — Screen-oriented (visual) display editor . . . . .	1129
5.36	who — Display who is on the system . . . . .	1177
5.37	write — Write to another user . . . . .	1180
Section 6: Software Development Utilities Option . . . . .		1187
6.1	ar — Create and maintain library archives . . . . .	1187
6.2	make — Maintain, update, and regenerate groups of programs . . . . .	1197
6.3	strip — Remove unnecessary information from executable files . . . . .	1228
Annex A (normative) C Language Development Utilities Option . . . . .		1233
A.1	c89 — Compile Standard C programs . . . . .	1233
A.2	lex — Generate programs for lexical tasks . . . . .	1247
A.3	yacc — Yet another compiler compiler . . . . .	1266
Annex B (normative) C Language Bindings Option . . . . .		1287
B.1	C Language Definitions . . . . .	1287
B.2	C Numerical Limits . . . . .	1288
B.3	C Binding for Shell Command Interface . . . . .	1291
B.4	C Binding for Access Environment Variables . . . . .	1295
B.5	C Binding for Regular Expression Matching . . . . .	1295
B.6	C Binding for Match Filename or Pathname . . . . .	1314
B.7	C Binding for Command Option Parsing . . . . .	1319
B.8	C Binding for Generate Pathnames Matching a Pattern . . . . .	1322
B.9	C Binding for Perform Word Expansions . . . . .	1330
B.10	C Binding for Get POSIX Configurable Variables . . . . .	1333
B.11	C Binding for Locale Control . . . . .	1336
Annex C (normative) FORTRAN Development Utilities Option . . . . .		1337
C.1	asa — Interpret carriage control characters . . . . .	1337
C.2	fort77 — FORTRAN compiler . . . . .	1342
Annex D (informative) Bibliography . . . . .		1355
Identifier Index . . . . .		1359
Alphabetic Topical Index . . . . .		1365
Acknowledgments . . . . .		1401

# Information Technology— Test Methods for Measuring Conformance to POSIX<sup>®</sup> — Part 2: Shell and Utilities Interfaces

## iTeh STANDARD PREVIEW Section 1: General (standards.iteh.ai)

[ISO/IEC 14515-2:2003](https://standards.iteh.ai/catalog/standards/sist/eceacab3-3cdb-4738-a8d6-ac8c62d1782d/iso-iec-14515-2-2003)

### 1.1 Scope

This document defines a standard for test methods for the interface to command interpretation, or “shell,” services and common utility programs for application programs. These test methods are derived from the definitions contained in ISO/IEC 9945-2:1993 (IEEE Std 1003.2-1992) {9}, hereinafter referred to as “POSIX.2 {9}.” The services and programs described in POSIX.2 {9} are complementary to those specified by ISO/IEC 9945-1:1990 (IEEE Std 1003.1-1990) {8}, hereinafter referred to as “POSIX.1 {8}.”

This standard has been designed to be used by both verification suite authors and system implementors. However, it is intended to be a reference document and not a tutorial on the construction of verification suites or implementations.

### 1.2 Normative References

The following standards contain provisions that, through references in this text, constitute provisions of this standard. At the time of publication, the editions indicated were valid. All standards are subject to revision, and parties to agreements based on this standard are encouraged to investigate the possibility of applying the most recent editions of the standards listed below. Members of IEC and ISO maintain registers of currently valid International Standards.
