Betonfertigteile - Balkendecken mit Zwischenbauteilen -Teil 2: Zwischenbauteile aus Beton

This European Standard was approved by CEN on 25 January 2009.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Iteland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Contents

The numbering of clauses is strictly related to EN 13369:2004 Common rules for precast concrete products, at least for the first three digits. When a clause of EN 13369:2004 is not relevant or included in a more general reference of this standard, its number is omitted and this may result in a gap on numbering.

iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>SIST EN 15037-2:2009</u> https://standards.iteh.ai/catalog/standards/sist/233bf906-bbb0-4fa3-ab7a-d2583358162f/sist-en-15037-2-2009

Foreword

This document (EN 15037-2:2009) has been prepared by Technical Committee CEN/TC 229 "Precast concrete products", the secretariat of which is held by AFNOR. This document was examined by and agreed with a joint working party appointed by the Liaison Group CEN/TC 229 – CEN/TC 250, particularly for its compatibility with structural Eurocodes.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by October 2009, and conflicting national standards shall be withdrawn at the latest by April 2012.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association, and supports essential requirements of EC Directive(s).

For relationship with EC Directive(s), see informative Annex ZA, which is an integral part of this document.

The European Standard for beam-and-block floor system is made of 5 parts:

- EN 15037-1, Precast concrete products Beam-and-block floor systems Part 1: Beams;
- (standards.iteh.ai)
 EN 15037-2, Precast concrete products Beam-and-block floor systems Part 2: Concrete blocks;
- EN 15037-3, Precast concrete products Beam-and-block floor systems Part 3: Clay blocks;
- FprEN 15037-4, Precast concrete products Beam-and-block floor systems Part 4: Polystyrene blocks;
- prEN 15037-5, Precast concrete products Beam-and-block floor systems Part 5: Lightweight blocks.

This European Standard is one of a series of product standards for precast concrete products.

For common aspects of concrete products, reference is made to EN 13369, from which also the relevant requirements of the EN 206-1 are taken.

The references to EN 13369 by CEN/TC 229 product standards are intended to make them homogeneous and to avoid repetitions of similar requirements.

Eurocodes are taken as a common reference for design aspects. The installation of some structural precast concrete products is dealt with by ENV 13670-1, which has, at the moment, the status of a European prestandard. In all countries it can be accompanied by alternatives for national application and it should not be treated as a European Standard.

The program of standards for structural precast concrete products comprises the following standards, in some cases consisting on several parts:

EN 1168, Precast concrete products — Hollow core slabs

EN 12794, Precast concrete products — Foundation piles

EN 12843, Precast concrete products — Masts and poles

EN 13224, Precast concrete products — Ribbed floor elements

EN 13225, Precast concrete products — Linear structural elements

EN 13693, Precast concrete products — Special roof elements

EN 13747, Precast concrete products — Floor plates for floor systems

EN 13978, Precast concrete products — Precast concrete garages

EN 14843, Precast concrete products — Stairs

EN 14844, Precast concrete products — Box culverts

EN 14991, Precast concrete products — Foundation elements

EN 14992, Precast concrete products — Wall elements

EN 15037-1, Precast concrete products — Beam-and-block floor systems — Part 1: Beams

EN 15050, Precast concrete products — Bridge elements

EN 15258, Precast concrete products — Retaining wall elements

This European Standard defines in Annex ZA the application methods of CE marking to products designed using the relevant EN Eurocodes (EN 1992-1-1:2004 and EN 1992-1-2:2004). Where, in default of applicability conditions of EN Eurocodes to the works of destination, design provisions other than EN Eurocodes are used for mechanical strength and/or fire resistance, the conditions to affix CE marking to the product are described in ZA.3.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard; Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Introduction

The evaluation of conformity refers to the completed precast elements which are supplied to the market and covers all the production operations carried out in the factory.

For design rules reference is made to EN 1992-1-1:2004. Additional complementary rules are provided where necessary.

iTeh STANDARD PREVIEW (standards.iteh.ai)

<u>SIST EN 15037-2:2009</u> https://standards.iteh.ai/catalog/standards/sist/233bf906-bbb0-4fa3-ab7a-d2583358162f/sist-en-15037-2-2009

1 Scope

This European Standard deals with the requirements and the basic performance criteria for blocks made in normal or lightweight aggregate concrete, used in conjunction with precast concrete beams in compliance with EN 15037-1, with or without cast-in-situ concrete for the construction of beam-and-block floor and roof systems.

Examples of typology of floor and roof systems are given in Annex B of EN 15037-1:2008.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 771-3:2004, Specification for masonry units — Part 3: Aggregate concrete masonry units (Dense and light-weight aggregates)

EN 772-13, Methods of test for masonry units — Part 13: Determination of net and gross dry density of masonry units (except for natural stone)

EN 772-14, Methods of test for masonry units — Part 14: Determination of moisture movement of aggregate concrete and manufactured stone masonry units ARD PREVIEW

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

non-resisting block

block with no mechanical function in the final floor system (designated NR)

NOTE Its only mechanical function is that of formwork during the construction of the floor system. Floor systems built with non-resisting blocks always have a cast-in-situ structural topping.

3.2

semi-resisting block

block participating in the transfer of loads to the beams (designated SR)

NOTE In conjunction with a cast-in-situ concrete, it may contribute to the final strength of the system. However, its top flange alone cannot act as a compression slab in the final floor system.

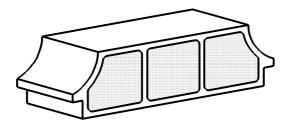

Figure 1 — Example of semi-resisting concrete blocks

3.3 resisting block

block with the same functions as semi-resisting blocks but whose top flange can, under certain conditions, play a role as compression slab in the final floor system (designated RR)

Figure 2 — Examples of resisting concrete blocks

https://standards.iteh.ai/catalog/standards/sist/233bf906-bbb0-4fa3-ab7a-d2583358162f/sist-en-15037-2-2009

3.4 nib

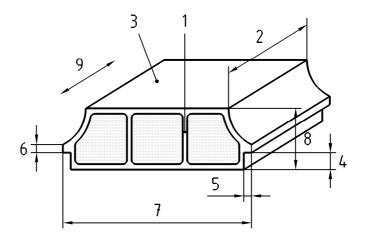

shape given to the block so that it will bear on the beam

3.5

longitudinal block

block where the axis of the perforations are parallel to the beam

NOTE An example of a longitudinal block is given in Figure 3.

Key

3.6

transverse block (standards.iteh.ai)
block where the axis of the perforations are perpendicular to the beam

NOTE

An example of a transverse block is given in Figure 4.
