**ISO general purpose metric screw threads — Tolerances —
Deviations for constructional threads**

First edition — 1973-07-01

UDC 621.882.082.1

Réf. No. ISO 965/III-1973 (E)

Descriptors : fasteners, screw threads, threads, screws, nuts (fasteners), dimensional tolerances, designation.

Price based on 14 pages

FOREWORD

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO Member Bodies). The work of developing International Standards is carried out through ISO Technical Committees. Every Member Body interested in a subject for which a Technical Committee has been set up has the right to be represented on that Committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the Technical Committees are circulated to the Member Bodies for approval before their acceptance as International Standards by the ISO Council.

Prior to 1972, the results of the work of the Technical Committees were published as ISO Recommendations; these documents are now in the process of being transformed into International Standards. As part of this process, International Standard ISO 965/III replaces ISO Recommendation R 965/III-1969 drawn up by Technical Committee ISO/TC 1, *Screw threads*.

The Member Bodies of the following countries approved the Recommendation :

Argentina	France	Romania
Australia	Germany	South Africa, Rep. of
Austria	Greece	Spain
Belgium	India	Sweden
Brazil	Israel	Switzerland
Canada	Italy	Turkey
Chile	Japan	United Kingdom
Czechoslovakia	Korea, Rep. of	U.S.A.
Denmark	Netherlands	Yugoslavia
Egypt, Arab Rep. of	New Zealand	
Finland	Norway	

No Member Body expressed disapproval of the Recommendation.

This International Standard is one of a number of ISO publications determining tolerances for ISO metric screw threads. The complete set is made up as follows :

ISO 965/I, *ISO general purpose metric screw threads – Tolerances – Principles and basic data.*

ISO 965/II, *ISO general purpose metric screw threads – Tolerances – Limits of sizes for commercial bolt and nut threads – Medium quality.*

ISO 965/III, *ISO general purpose metric screw threads – Tolerances – Deviations for constructional threads.*

ISO/R 1501, *ISO miniature screw threads.*

ISO general purpose metric screw threads – Tolerances – Deviations for constructional threads

1 SCOPE AND FIELD OF APPLICATION

This International Standard specifies deviations for pitch and crest diameters for ISO general purpose metric screw threads conforming to ISO 261, *ISO general purpose metric screw threads – General plan*.

The deviations specified are derived from the fundamental deviations and tolerances specified in ISO 965/I.

2 DESIGNATION

Tolerances are designated by the relevant tolerance class as found under the heading "Tolerance class" in the tables.

Examples :

M6–6H
M6–5g6g

A fit between threaded parts is indicated by the nut thread tolerance designation followed by the bolt thread tolerance designation separated by a stroke.

Example :

M6–6H/5g6g

3 REMARKS

For nut threads as well as bolt threads, the actual root contour shall not in any point transgress the basic profile.

The tabulated values for the minor diameter of the bolt thread are calculated on the basis of an $H/6$ truncation and are to be used for stress calculations, etc.

For coated threads, the tolerances apply to the parts *before* coating, unless otherwise stated. After coating, the actual thread profile shall not in any point transgress the maximum material limits for position H or h respectively.

4 DEVIATIONS

ES, es = upper deviation
EI, ei = lower deviation

Basic major diameter		Pitch	Nut thread				Bolt thread						
over	up to and incl.		Tolerance class	Pitch diameter		Minor diameter		Tolerance class	Major diameter		Pitch diameter		Minor diameter (for stress calculations, etc.)
