This European Standard was approved by CEN on 29 July 2004 and includes Amendment 1 approved by CEN on 16 May 2007.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN Management Centre has the same status as the official versions.

iTeh STANDARD PREVIEW

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document (EN 12697-35:2004+A1:2007) has been prepared by Technical Committee CEN/TC 227 "Road materials", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by January 2008 and conflicting national standards shall be withdrawn at the latest by January 2008.

This document includes Amendment 1, approved by CEN on 2007-05-16.

This document supersedes EN 12697-35:2004.

The start and finish of text introduced or altered by amendment is indicated in the text by tags **A₁** **A₁**.

This document is one of a series of standards as listed below:

EN 12697-1, *Bituminous mixtures — Test methods for hot mix asphalt — Part 1: Soluble binder content*

EN 12697-2, *Bituminous mixtures — Test methods for hot mix asphalt — Part 2: Determination of particle size distribution*

EN 12697-3, *Bituminous mixtures — Test methods for hot mix asphalt — Part 3: Bitumen recovery: Rotary evaporator*

EN 12697-4, *Bituminous mixtures — Test methods for hot mix asphalt — Part 4: Bitumen recovery: Fractionating column*
<https://standards.iteh.ae/catalog/standards/sist-en-12697-35-2005a1-2007>

EN 12697-5, *Bituminous mixtures — Test methods for hot mix asphalt — Part 5: Determination of the maximum density*

EN 12697-6, *Bituminous mixtures — Test methods for hot mix asphalt — Part 6: Determination of bulk density of bituminous specimens*

EN 12697-7, *Bituminous mixtures — Test methods for hot mix asphalt — Part 7: Determination of bulk density of bituminous specimens by gamma rays*

EN 12697-8, *Bituminous mixtures — Test methods for hot mix asphalt — Part 8: Determination of void characteristics of bituminous specimens*

EN 12697-9, *Bituminous mixtures — Test methods for hot mix asphalt — Part 9: Determination of the reference density*

EN 12697-10, *Bituminous mixtures — Test methods for hot mix asphalt — Part 10: Compactability*

EN 12697-11, *Bituminous mixtures — Test methods for hot mix asphalt — Part 11: Determination of the affinity between aggregate and bitumen*

EN 12697-12, *Bituminous mixtures — Test methods for hot mix asphalt — Part 12: Determination of the water sensitivity of bituminous specimens*

EN 12697-13, *Bituminous mixtures — Test methods for hot mix asphalt — Part 13: Temperature measurement*

EN 12697-14, Bituminous mixtures — Test methods for hot mix asphalt — Part 14: Water content

EN 12697-15, Bituminous mixtures — Test methods for hot mix asphalt — Part 15: Determination of the segregation sensitivity

EN 12697-16, Bituminous mixtures — Test methods for hot mix asphalt — Part 16: Abrasion by studded tyres

EN 12697-17, Bituminous mixtures — Test methods for hot mix asphalt — Part 17: Particle loss of porous asphalt specimen

EN 12697-18, Bituminous mixtures — Test methods for hot mix asphalt — Part 18: Binder drainage

EN 12697-19, Bituminous mixtures — Test methods for hot mix asphalt — Part 19: Permeability of specimen

EN 12697-20, Bituminous mixtures — Test methods for hot mix asphalt — Part 20: Indentation using cube or Marshall specimens

EN 12697-21, Bituminous mixtures — Test methods for hot mix asphalt — Part 21: Indentation using plate specimens

EN 12697-22, Bituminous mixtures — Test methods for hot mix asphalt — Part 22: Wheel tracking

EN 12697-23, Bituminous mixtures — Test methods for hot mix asphalt — Part 23: Determination of the indirect tensile strength of bituminous specimens

1 Scope

This document describes the laboratory mixing of bituminous materials for the manufacture of specimens. The document specifies the reference temperatures for mixing based on the paving grade of the binder.

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 58, *Bitumen and bituminous binders — Sampling bituminous binders*.

EN 12591, *Bitumen and bituminous binders — Specifications for paving grade bitumens*.

EN 12595, *Bitumen and bituminous binders — Determination of kinematic viscosity*.

3 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1

reference compaction temperature

target value at which compaction of an asphalt mixture starts

3.2

target mixing temperature

value at which component materials are mixed to form an asphalt mixture

3.3

maximum mixing temperature

value that an asphalt mixture shall not exceed during the mixing process

4 Principle

The bituminous mixture is prepared at a target temperature within a time that is limited in order to reduce mechanical degradation of the aggregates. The target temperature depends on the grade of bitumen.

NOTE The target temperature for mixing is related to the reference temperatures used for its subsequent compaction.

iTeh STANDARD PREVIEW

5 Apparatus

(standards.iteh.ai)

5.1 Laboratory mixer, capable of entirely coating all mineral substances in not more than 5 min and, preferably equipped with thermostatically controlled heating and mechanical speed control. The mixer shall be of the whisk or other type that is not so rigid that it can damage either the aggregate particles or the bowl.

8a6ff1509B9/sist-en-12697-35-2005a1-2007

5.2 Ventilated oven, for heating aggregates and bitumen up to the relevant target temperature from Table 1 to the accuracy given in EN 12697-38.

5.3 Balance, capable of measuring the mass of the intended mixture to the accuracy given in EN 12697-38.

5.4 Thermometer, capable of measuring the relevant target temperature from Table 1 to the accuracy given in EN 12697-38.

5.5 Hot plate. Adjustable hot plate, capable of maintaining the required target temperature during the manual mixing to the accuracy given in EN 12697-38.

6 Procedure

6.1 Mixing temperature

6.1.1 Unless given in the European Standard for the compaction device to be used (A1) EN 12697-30:2004+A1 A1, EN 12697-31, A1 EN 12697-32:2003+A1 A1 or A1 EN 12697-33:2003+A1 A1), the reference temperature for mixtures with paving grade bitumen to EN 12591 shall be taken from Table 1. For mixtures with modified binders or other additives, the reference temperature shall be selected so that the binder has a viscosity to EN 12595 that is similar to those provided in Table 1. For mixtures with reclaimed asphalt, the reference temperature shall be calculated using the overall penetration calculated from the penetrations and proportions of both the added binder and the binder recovered from the reclaimed asphalt A1 in accordance with Annex A of EN 13108-1:2006, EN 13108-2:2006, EN 13108-3:2006, EN 13108-4:2006, EN 13108-5:2006, EN 13108-6:2006 or EN 13108-7:2006 as appropriate. A1
