<https://standards.iteh.ai/catalog/standards/sist/4e9-a9896-72f6-4e4f-92d2-f244d0fd1d6b/etsi-ts-181-005-v3.3.1-2009-12>

Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: "*Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards*", which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN).

The present document describes the Service and Capability Requirements of TISPAN NGN Release 2.

Introduction

The present document specifies the requirements that need to be fulfilled by NGN technical specifications to provide services in an NGN.

The present document considers different service sets: IP Multimedia Services, PSTN/ISDN Emulation services and IPTV. Each of these service sets has its own clause, which is further divided into clauses providing clear and precise requirements for each of these service sets. Further clauses provide generic network requirements to support service deployment and interoperability.

The present document provides generic requirements on networks from a service point of view. Specific details of individual services and capabilities are provided in other documents.

1 Scope

The present document specifies network requirements in terms of service-related capabilities for TISPAN NGN. The present document places requirements for all TISPAN NGN subsystems.

The present document provides generic requirements for services and interoperability in TISPAN NGN in terms of the capabilities for a network or networks.

Requirements on service-related subsystems provide sufficient details for architecture, networking requirements and protocols to be specified. Requirements on service independent subsystems are contained within the service-related subsystem requirements.

Specific service requirements may be contained in other documents, as identified in the present document, and by other documents referencing the present document.

The present document does not define services, only capabilities and requirements. The present document does not place requirements on terminals or other customer-owned equipment. The present document specifies the service-related requirements that are used to determine the network architecture, requirements and control protocols for a network interface to a customer environment.

NOTE: The present document uses the term "NGN" only in the context of TISPAN.

2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific.

- For a specific reference, subsequent revisions do not apply.
- Non-specific reference may be made only to a complete document or a part thereof and only in the following cases:
 - if it is accepted that it will be possible to use all future changes of the referenced document for the purposes of the referring document;
 - for informative references.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

2.1 Normative references

The following referenced documents are indispensable for the application of the present document. For dated references, only the edition cited applies. For non-specific references, the latest edition of the referenced document (including any amendments) applies.

- [1] ETSI TS 122 340: "Digital cellular telecommunications system (Phase 2+); Universal Mobile Telecommunications System (UMTS); LTE; IP Multimedia Subsystem (IMS) messaging; Stage 1 (3GPP TS 22.340)".

2.2 Informative references

The following referenced documents are not essential to the use of the present document but they assist the user with regard to a particular subject area. For non-specific references, the latest version of the referenced document (including any amendments) applies.

- [i.1] ETSI TR 180 000: "Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN); NGN Terminology".
- [i.2] Void.
- [i.3] IETF RFC 4282: "The Network Access Identifier".
- [i.4] ETSI TR 187 009: "Telecommunications and Internet Converged Services and Protocols for Advanced Networking (TISPAN); Feasibility study of prevention of unsolicited communication in the NGN".
- [i.5] ETSI TS 187 015: "Telecommunications and Internet converged Services and Protocols for Advanced Networking (TISPAN); Specifications for PUC (Prevention of Unsolicited Communication) in the NGN".

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in TS 122 228 [6] and TR 180 000 [i.1] and the following apply:

application provider: NGN operator role that offers NGN applications to the Customers making use of the services capabilities provided by the NGN Service Provider

NOTE: It can perform user authentication at the application level.

black list: list of identity information whom parties are identified as with malicious information

NOTE: This list is managed by the user or the service provider.

Fixed Terminal (FT): Terminal connected to the TISPAN NGN network either via a corded interface or a fixed-wireless interface (e.g. Wi-Fi, Bluetooth or DECT/DECT-NG)

IP multimedia application: See TS 122 228 [6].

IP Multimedia Core Network Subsystem (IM CN Subsystem): See TS 122 228 [6].

IP multimedia service: See TS 122 228 [6].

IP multimedia session: See TS 122 228 [6].

NGN Access Network Provider (NANP): NGN operator role that aggregates traffic between multiple last mile access networks and one or multiple NGN Connectivity Providers

NOTE: The NANP is also responsible for resource management, gating and traffic control between the User Equipment and the IP edge as appropriate, according to the transport control service requested by the NGN Connectivity Provider. The NANP holds the subscriber access profile (e.g. ADSL line QoS profile, NCP associated with a physical ADSL line, etc.) as well as policy and configuration data associated with the NGN connectivity provider. The NANP does not own subscriber access profile information.

NGN Connectivity Provider (NCP): NGN operator role that provides connectivity between the user and one or multiple Core Transport Networks

NOTE: The NCP provides a connectivity service to users and therefore owns the commercial relationship with them and the subscriber access profile data (e.g. user authentication credentials, set of allowed QoS-enabled applications). The NCP is also responsible for performing admission control decisions as well as guaranteeing and monitoring the agreed QoS and security characteristics of traffic to and from a particular user.

NGN Core Network Provider (NCNP): NGN operator role that relies in infrastructure supported by different types of high-speed technology, e.g. ATM, SDH, others, and aggregates traffic between edge nodes located in different access networks, or between an edge node located in an access network and an external network, e.g. PSTN, or other IP network types

NOTE: The NCNP is also responsible for core resource management, gating, QoS control and traffic control, between the core network border entities, e.g. C-BGF and I-BGF, according to the transport control service requested by the NGN Connectivity Provider. The NCNP is also responsible for policy enforcement and NAT related handling.

NGN operator role: activity or set of activities performed by a telecom operator played in the context of a NGN deployment scenario

NOTE: Each activity may denote different types of roles, e.g., business role or technical role, depending on the nature of the services or tasks performed in each scenario. Independently of the numbers and types of roles identified for the players in these deployment scenarios, the following rules apply:

- a telecom operator player is composed of one or more roles;
- each of these roles is either a business role, a technical role or both;
- at least one role is a business role within an administrative domain.

NGN Service Provider (NSP): NGN operator role that offers NGN based services which share a consistent set of policies and common technologies

NOTE: The NSP provides common functionalities e.g. user service authentication and identification, service control, charging, etc. Several Application Providers can use the same NSP to deliver applications to the Customers.

nomadism: See TR 180 000 [i.1].

portability: See TR 180 000 [i.1].

unknown party: party who is unknown by the other party (e.g. not in his Address Book), different from "anonymous")

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

ACR	Anonymous Communications Rejection service requirements
ADSL	Asymmetric Digital Subscriber Line
AMR	Adaptive Multi-Rate
AN	Access Network
ATM	Asynchronous Transfer Mode
C-BGF	Core-Border Gateway Function
CDR	Charging Data Record
CN	Core Network
CoIx	Connectivity-oriented Interconnection
COMIF	Customized Originating Multimedia Information Filtering
COMIP	Customized Originating Multimedia Information Presentation
CPE	Customer Premises Equipment
CS	Circuit Switched
CTMIF	Customized Terminating Multimedia Information Filtering
CTMIP	Customized Terminating Multimedia Information Presentation
DoS	Denial of Service
DSL	Digital Subscriber Line
ECN	Electronic Communication Network
EVRC	Enhanced Variable Rate Codec
EVRC-B	EVRC wideBand
HW	Hardware
I-BGF	Interconnection Border Gateway Function
IM	IP Multimedia
IMS	IP Multimedia Subsystem
IP	Internet Protocol
IPTV	IP Television
IPv4	Internet Protocol version 4
IPv6	Internet Protocol version 6
ISDN	Integrated Services Digital Network
ISP	Internet Service Provider
LI	Lawful Interception
MCID	Malicious Communication Identity service requirements
NAI	Network Access Identifier
NANP	NGN Access Network Provider
NASS	Network Attachment Subsystem
NAT	Network Address Translation
NB	NarrowBand
NCNP	NGN Core Network Provider
NCP	NGN Connectivity Provider
NG	Next Generation
NGN	Next Generation Network
NSP	NGN Service Provider
PES	PSTN/ISDN Emulation Subsystem
PLMN	Public Land Mobile Network
PSTN	Public Switched Telephone Network
PUC	Prevention of Unsolicited Communication
QoS	Quality of Service
RACS	Resource and Admission Control Subsystem
SDH	Synchronous Digital Hierarchy
SLA	Service Level Agreements
SoIx	Service-oriented Interconnection
SP	Service Provider
SUB	Subaddressing
TDM	Time Division Multiplexing
TE	Terminal Equipment
UC	Unsolicited Communication
UNI	User to Network Interface
