SIST ETS 300 150 E1:2003
<https://standards.iteh.ai/catalog/standards/sist/b790ea3c-d636-4792-9c25-11465ea4ff35/sist-ets-300-150-e1-2003>

Foreword

This European Telecommunication Standard (ETS) has been produced by the Transmission and Multiplexing (TM) Technical Committee of the European Telecommunications Standards Institute (ETSI).

This ETS concerns the characteristics of Q interfaces for transmission systems and equipments, and the text is based on draft CCITT Recommendation G.773. Although in 1990 CCITT SGXV agreed to adopt the Recommendation under the accelerated approval procedure, ETSI TC-TM is seeking to provide an ETS for use in Europe rather quicker than this. The text of this ETS is to be revised in due course to take account of the eventual published version of the finally approved CCITT Recommendation G.773.

NOTE: Draft CCITT Recommendation G.773 is not normatively referenced in this ETS as most of the text is included. However, it is probable that a future edition will refer to it normatively, thereby reducing the size of this ETS.

1 Scope

This ETS defines the characteristics of protocol suites for Q interfaces for transmission systems/equipments, as defined in CCITT Recommendations M.3010 [2] and G.773. Protocol suites for Q interfaces for other systems/equipments are to be specified in other ETSs. The interfaces will support bidirectional data transfer for the management of telecommunications systems.

This ETS defines:

- the layer services;
- the layer protocols;
- the application service elements and protocols;
- the conformance requirements to be met by an implementation of these interfaces.

This ETS does not define:

- the structure or meaning of the management information that is transmitted by means of the protocol suites;
- the manner in which management is accomplished as a result of the application protocol exchanges;
- the interactions which result in the use of the application layer protocols.

2 Normative references

ITU STANDARD PREVIEW

This ETS incorporates, by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this ETS only when incorporated in it by amendment or revision. For undated references, the latest edition of the publication referred to applies.
