## iTeh STANDARD PREVIEW (standards.iteh.ai)

## BODY OF THE HD

The Harmonization Document consists of:  
<https://standards.iteh.ai/catalog/standards/sist/b13687d8-0ab6-45e5-aefb-2f176270041/iit-hd-307-2-s1-1998>  
 - IEC 455-2-2 (1984) ed 1; IEC/SC 15C, not appended

This Harmonization Document was approved by CENELEC on 26 June 1986.

The English and French versions of this Harmonization Document are provided by the text of the IEC publication and the German version is the official translation of the IEC text.

According to the CENELEC Internal Regulations the CENELEC member National Committees are bound:

to announce the existence of this Harmonization Document at national level  
 by or before 1987-01-01

to publish their new harmonized national standard  
 by or before 1987-07-01

to withdraw all conflicting national standards  
 by or before 1987-07-01.

Harmonized national standards are listed on the HD information sheet,  
 which is available from the CENELEC National Committees or from the CENELEC Central Secretariat.

The CENELEC National Committees are the national electrotechnical committees of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxemburg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**SPECIFICATION FOR  
SOLVENTLESS POLYMERISABLE RESINOUS COMPOUNDS  
USED FOR ELECTRICAL INSULATION**

**Part 2: Methods of test  
Test methods for coating powders for electrical purposes**

## FOREWORD

- 1) The formal decisions or agreements of the IEC on technical matters, prepared by Technical Committees on which all the National Committees having a special interest therein are represented, express, as nearly as possible, an international consensus of opinion on the subjects dealt with.
- 2) They have the form of recommendations for international use and they are accepted by the National Committees in that sense.
- 3) In order to promote international unification, the IEC expresses the wish that all National Committees should adopt the text of the IEC recommendation for their national rules in so far as national conditions will permit. Any divergence between the IEC recommendation and the corresponding national rules should, as far as possible, be clearly indicated in the latter.

**iTeh STANDARD PREVIEW  
(standards.iteh.ai)**

## PREFACE

SIST HD 307.2.2 S1:1998

This standard has been prepared by Sub-Committee 15C: Specifications, of IEC Technical Committee No. 15: Insulating Materials.  
<https://standards.iteh.ai/catalog/standards/sist/b1368/d8-0ab6-45c5-aeb2>

The text of this standard is based upon the following documents:

Six Months' Rule	Report on Voting
15C(CO)139	15C(CO)161

Further information can be found in the Report on Voting indicated in the table above.

*The following IEC publications are quoted in this standard:*

- Publications Nos. 79-7 (1969): Electrical Apparatus for Explosive Gas Atmospheres, Part 7: Construction and Test of Electrical Apparatus, Type of Protection "e".
- 93 (1980): Methods of Test for Volume Resistivity and Surface Resistivity of Solid Electrical Insulating Materials.
- 112 (1979): Method for Determining the Comparative and the Proof Tracking Indices of Solid Insulating Materials under Moist Conditions.
- 212 (1971): Standard Conditions for Use prior to and during the Testing of Solid Electrical Insulating Materials.
- 216-1 (1974): Guide for the Determination of Thermal Endurance Properties of Electrical Insulating Materials, Part 1: General Procedures for the Determination of Thermal Endurance Properties, Temperature Indices and Thermal Endurance Profiles.
- 243 (1967): Recommended Methods of Test for Electric Strength of Solid Insulating Materials at Power Frequencies.
- 250 (1969): Recommended Methods for the Determination of the Permittivity and Dielectric Dissipation Factor of Electrical Insulating Materials at Power, Audio and Radio Frequencies including Metre Wavelengths.
- 394-2 (1972): Varnished Fabrics for Electrical Purposes, Part 2: Methods of Test.
- 455-1 (1974): Specification for Solventless Polymerisable Resinous Compounds Used for Electrical Insulation, Part 1: Definitions and General Requirements.
- 455-2 (1977): Part 2: Methods of Test.

*Other publications quoted:*

- ISO Standard 60 (1977): Plastics — Determination of Apparent Density of Material that Can be Poured from a Specified Funnel.
- 683-1 (1968): Heat-treated Steels, Alloy Steels and Free-cutting Steels, Part 1: Quenched and Tempered Unalloyed Steels.
- 1518 (1973): Paints and Varnishes — Scratch Test.
- 2591 (1973): Test Sieving.

**iTeh STANDARD PREVIEW**  
**(standards.iteh.ai)**

[SIST HD 307.2.2 S1:1998](#)

<https://standards.iteh.ai/catalog/standards/sist/b13687d8-0ab6-45e5-aefb-2f2176279941/sist-hd-307-2-2-s1-1998>

## SPECIFICATION FOR SOLVENTLESS POLYMERISABLE RESINOUS COMPOUNDS USED IN ELECTRICAL INSULATION

### Part 2: Methods of test Test methods for coating powders for electrical purposes

---

#### INTRODUCTION

This standard is one of the series which deals with solventless polymerisable resinous compounds used for electrical insulation. The series will have the following three parts:

Part 1: Definitions and general requirements.

Part 2: Methods of test.

Part 3: Specifications for individual materials (under consideration).

#### Scope

This standard gives methods of test for thermo-setting coating powders as defined in Sub-clause 3.7 of IEC Publication 455-1: Specification for Solventless Polymerisable Resinous Compounds used for Electrical Insulation, Part 1: Definitions and General Requirements. Tests are included for the material before cure and in the cured form.

## STANDARD REVIEW

### (standards.iteh.ai)

#### SECTION ONE — TESTS FOR MATERIALS BEFORE CURE

##### 1.1 Bulk density

<https://standards.iteh.ai/catalog/standards/sist/b13687d8-0ab6-45e5-aefb-2f2176279941/sist-hd-307-2-2-s1-1998>

To be determined in accordance with ISO Standard 60: Plastics — Determination of Apparent Density of Material that Can be Poured from a Specified Funnel.

##### 1.2 Pourability

###### 1.2.1 Apparatus

- Funnel according to Figure 1, page 35, provided with means for placing it in a vertical position.
- Stop-watch or timer of comparable accuracy.

###### 1.2.2 Procedure

Work powder sample on a sheet of paper until there is no tendency for the material to pack or cake. Place the funnel in a vertical position and close the small end with the hand or with a suitable strip and pour a 100 g sample of powder lightly into the funnel, avoiding any tendency to pack it. Then quickly open the bottom of the funnel and at the same instant start the stop watch or timer. Allow the powder to run freely from the funnel, and stop the watch or timer at the instant the last of it leaves the funnel.

###### 1.2.3 Result

State the time, in seconds, required for the funnel to discharge, to the nearest 0.5 s or, if necessary, state that the material will not run through the funnel.
