Intellectual Property Rights

IPRs essential or potentially essential to the present document may have been declared to ETSI. The information pertaining to these essential IPRs, if any, is publicly available for **ETSI members and non-members**, and can be found in ETSI SR 000 314: *"Intellectual Property Rights (IPRs); Essential, or potentially Essential, IPRs notified to ETSI in respect of ETSI standards"*, which is available from the ETSI Secretariat. Latest updates are available on the ETSI Web server (<http://webapp.etsi.org/IPR/home.asp>).

Pursuant to the ETSI IPR Policy, no investigation, including IPR searches, has been carried out by ETSI. No guarantee can be given as to the existence of other IPRs not referenced in ETSI SR 000 314 (or the updates on the ETSI Web server) which are, or may be, or may become, essential to the present document.

Foreword

This Technical Specification (TS) has been produced by ETSI Technical Committee Smart Card Platform (SCP).

It is based on work originally done by the 3GPP group in "TSG-Terminals WG3" and by "ETSI Special Mobile Group (SMG)".

The present document details the stage 1 aspects (overall service description) for the support of a UICC Application Programming Interface (API).

The contents of the present document are subject to continuing work within ETSI SCP and may change following formal ETSI SCP approval. Should ETSI SCP modify the contents of the present document it will then be republished by ETSI with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
 - 0 early working draft;
 - 1 presented to TC SCP for information;
 - 2 presented to TC SCP for approval;
 - 3 or greater indicates TC SCP approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

1 Scope

The present document defines the service description of the UICC Application Programming Interface (UICC API) internal to the UICC. Stage one is an overall service description, and does not deal with the implementation details of the API.

The present document includes information applicable to network operators, service providers and terminal, UICC, Network Access Application (NAA) providers, switch and database manufacturers.

The present document contains the core requirements, which are sufficient to provide a complete service.

It is highly desirable however, that technical solutions for a UICC API should be sufficiently flexible to allow for possible enhancements. Additional functionalities not documented in the present document may implement requirements which are considered outside the scope of the present document. This additional functionality may be on a network wide basis, nation-wide basis or particular to a group of users. Such additional functionality shall not compromise conformance to the core requirements of the service.

2 References

References are either specific (identified by date of publication and/or edition number or version number) or non-specific.

- For a specific reference, subsequent revisions do not apply.
- In the case of a reference to a TC SCP document, a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
- Non-specific reference may be made only to a complete document or a part thereof and only in the following cases:
 - if it is accepted that it will be possible to use all future changes of the referenced document for the purposes of the referring document;
 - for informative references.

Referenced documents which are not found to be publicly available in the expected location might be found at <http://docbox.etsi.org/Reference>.

NOTE: While any hyperlinks included in this clause were valid at the time of publication ETSI cannot guarantee their long term validity.

2.1 Normative references

The following referenced documents are indispensable for the application of the present document. For dated references, only the edition cited applies. For non-specific references, the latest edition of the referenced document (including any amendments) applies.

- [1] ETSI TS 102 221: "Smart cards; UICC-Terminal interface; Physical and logical characteristics (Release 7)".
- [2] ETSI TS 102 223: "Smart cards; Card Application Toolkit (CAT) (Release 7)".
- [3] ISO/IEC 7816-4: " Identification cards - Integrated circuit cards Part 4: Organization, security and commands for interchange".
- [4] ETSI TS 102 622: "Smart Cards; UICC - Contactless Front-end (CLF) Interface; Host Controller Interface (HCI)".
- [5] ETSI TS 102 613: "Smart Cards; UICC - Contactless Front-end (CLF) Interface; Part 1: Physical and data link layer characteristics".

- [6] ETSI TS 102 600: "Smart card ; UICC-Terminal interface; Characteristics of the USB interface".
- [7] ETSI TS 102 483: "Smart cards; Internet Protocol connectivity between UICC and terminal".
- [8] ETSI TS 102 484: "Smart Cards; Secure channel between a UICC and an end-point terminal".
- [9] OMA: "Smartcard Web Server Enabler Architecture",
OMA-AD-Smartcard_Web_Server-V1_0-20070209-C.
- [10] ETSI TS 102 412: "Smart cards; Smart Card Platform Requirements Stage 1".

2.2 Informative references

The following referenced documents are not essential to the use of the present document but they assist the user with regard to a particular subject area. For non-specific references, the latest version of the referenced document (including any amendments) applies.

Not applicable.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply:

applet: application built up using a number of modules which will run under the control of a virtual machine

application: in the scope of this document either an applet or a web-application.

bytecode: machine independent code generated by a bytecode compiler and executed by a bytecode interpreter

data structure: collection of related data values such as the age, birth date and height of an individual

framework: defines a set of Application Programming Interface (API) functions and data structures for developing applications and for providing system services to those applications

function: callable and executable body of computer instructions which perform a specific computation or data processing task

module: collection of functions and data structures which implement an entire application or a particular application feature or capability

UICC API framework: part of the UICC responsible for the handling of applications (including triggering and loading)

NOTE: It also contains the library for the proactive API.

Servlet: application built up using a number of modules responding to incoming Internet protocol request (e.g. TCP, HTTP, HTTPS ...)

NOTE: A Servlet runs under the control of a Servlet engine.

Servlet engine: part of the enhanced UICC API framework, responsible for handling incoming requests via the TCP/IP protocol (e.g. HTTP/HTTPS) and dispatching them to the web-application

toolkit applet: applet loaded onto the UICC seen by the mobile as being part of the UICC toolkit application and containing only the code necessary to run the application

NOTE: These applets might be downloaded over the radio interface.

trusted party: entity trusted by the card issuer with respect to security related services and activities

virtual machine: part of the run-time environment responsible for interpreting the bytecode

web-application: at least one Servlet or a combination of one or more Servlets, additional modules, applets, and static content

3.2 Abbreviations

For the purposes of the present document, the following abbreviations apply:

AID	Applet IDentifier
APDU	Application Protocol Data Unit
API	Application Programming Interface
AVN	Applet Version Number
BER	Bit Error Rate
CAD	Card Acceptance Device
CAT	Card Application Toolkit
CLF	Contactless Front-end
EPOS	Electronic Point Of Sale
HCI	Host Controller Interface
HTTP	Hypertext Transfer Protocol
IFD	InterFace Device
IP	Internet Protocol
MExE	Mobile Execution Environment
NAA	Network Access Application
RPC	Remote Procedure Call
TCP	Transmission Control Protocol
TLS	Transport Layer Security
TLV	Tag, Length, Value
UDP	User Datagram Protocol
UICC	Universal Integrated Circuit Card
WAP	Wireless Application Protocol

4 Description

The present document describes the high level requirements for an API for the UICC. This API shall allow application programmers easy access to the functions and data described in TS 102 221 [1] and TS 102 223 [2], such that UICC based services can be developed and loaded onto UICCs, quickly and, if necessary, remotely, after the UICC has been issued.

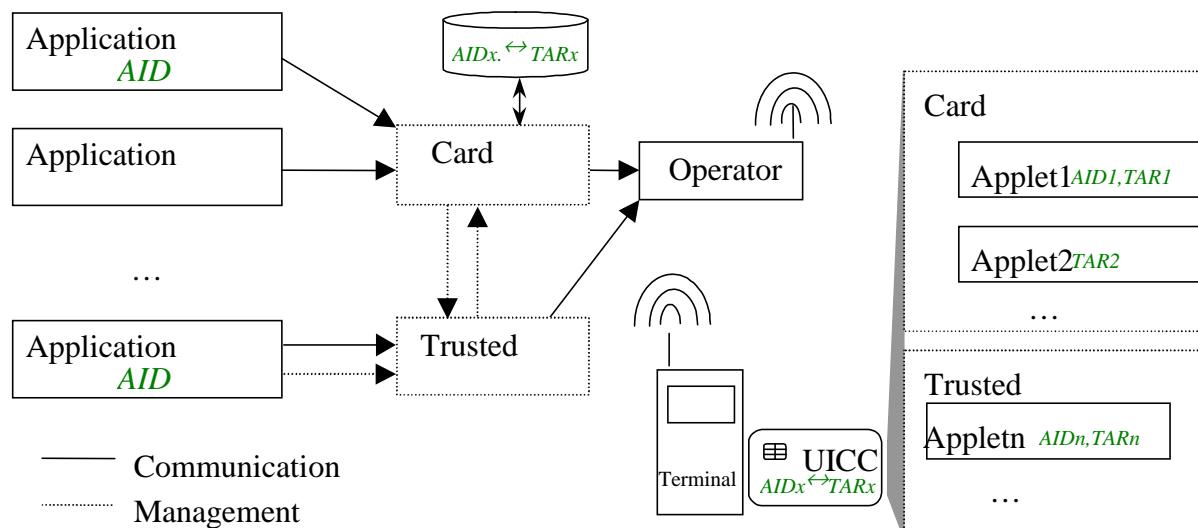

Figure 1: Toolkit applet management and communication

4.1 Design of UICC based applications using the UICC API

Figure 2 shows how UICC applications can be developed in a standard development environment and converted into an interpreted format, then loaded into the UICC.

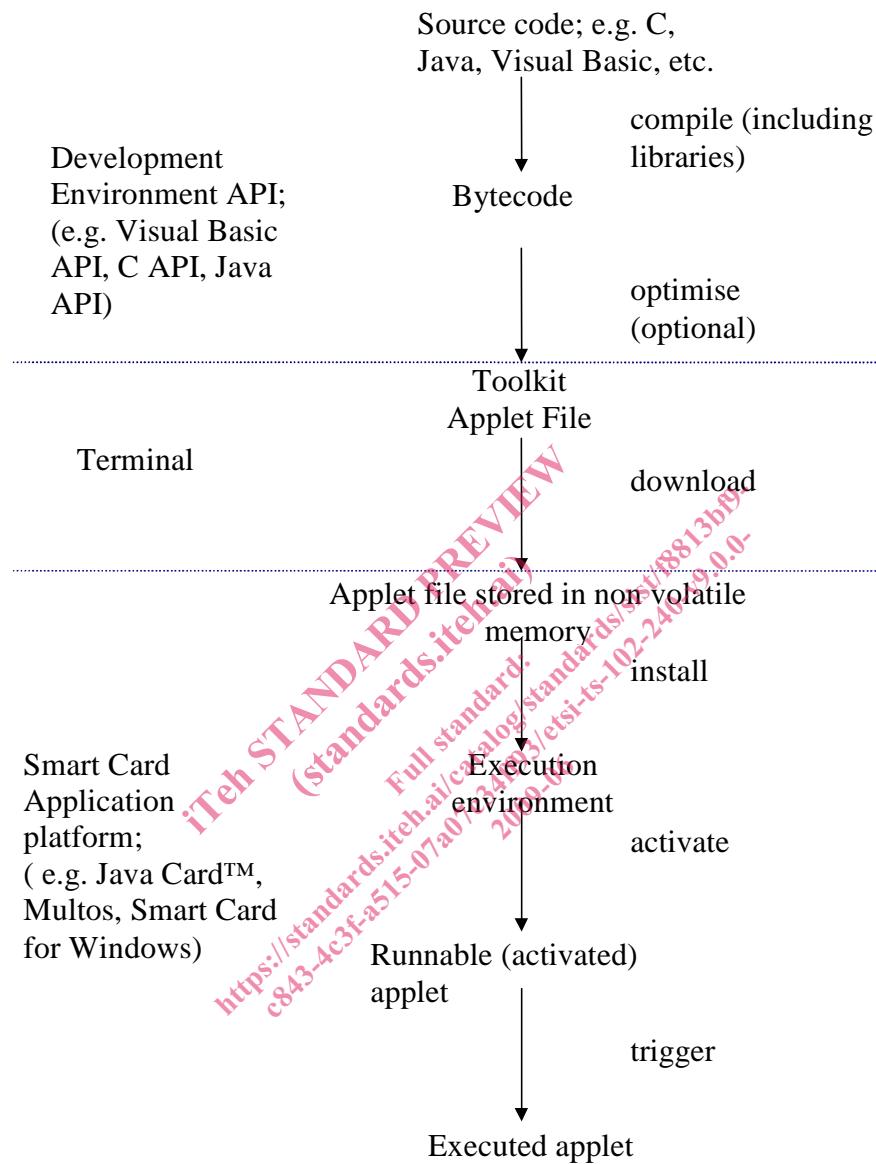

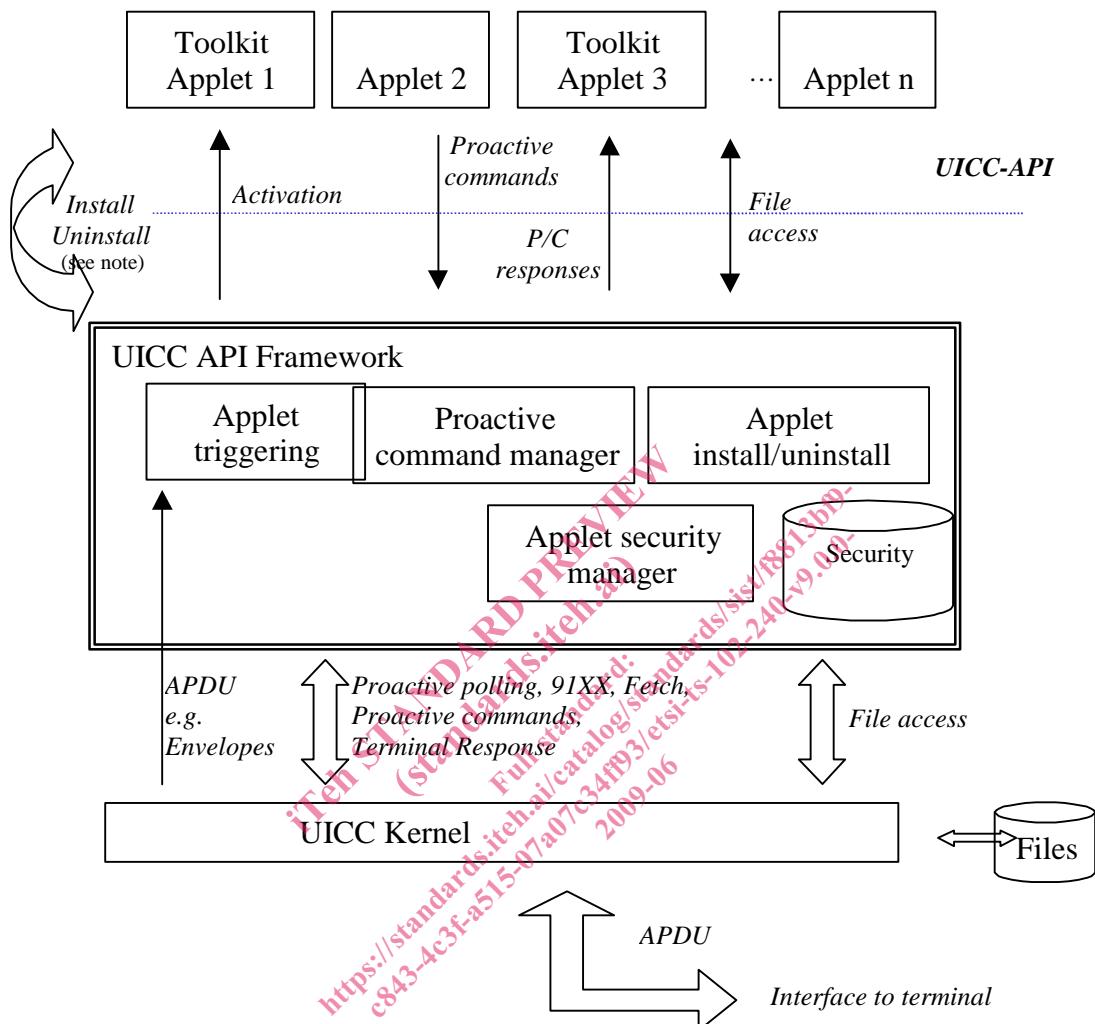

Figure 2: Flow diagram of the development of a UICC application

4.2 UICC API architecture

The UICC API shall consist of APIs for TS 102 223 [2] (pro-active functions) and TS 102 221 [1] (transport functions). Figure 3 illustrates the interactions between these APIs.

NOTE: The install / uninstall process does not form part of the API. Its requirements are outlined in clause 7.

Figure 3: UICC API architecture

In this model, the UICC data field structure is viewed as a series of data structures and data access functions to the API. In the physical model of course, they may still be stored in elementary files, but the functions will access these data as values within those data structures.

A general requirement of the UICC API is that applets should not interfere with the basic UICC services.

The UICC API framework shall prevent the toolkit applets from sending proactive commands which would interfere with the correct execution of the UICC operating system and/or other toolkit applets.
